Cyclic intermediates: Glossary of synonymous names--	356

INTRODUCTION

This is the sixtieth annual report of the U.S. International Trade Commission on domestic production and sales of synthetic organic chemicals and the raw materials from which they are made. The report consists of 15 sections, each covering a specified group (based principally on use) of organic chemicals as follows: Tar and tar crudes; primary products from petroleum and natural gas; intermediates; dyes; pigments; medicinal chemicals; flavor and perfume materials; plastics and resin materials; rubber-processing chemicals; elastomers; plasticizers; surface-active agents; pesticides and related products; miscellaneous end-use chemicals and chemical products; and miscellaneous cyclic and acyclic chemicals. Data have been supplied by approximately 800 producers.

The first table in each section gives statistics on products and groups of products in as great detail as is possible without revealing the operations of individual producers. Statistics for an individual chemical or group of chemicals are given only when there are three or more producers, no one or two of which may be predominant. Moreover, even when there are three or more producers, statistics are not given if there is any possibility that their publication would violate the statutory provisions relating to unlawful disclosure of information accepted in confidence by the Commission.¹

Data are reported by producers for only those items where the volume of production or sales or value of sales exceeds certain minimums. Those minimums for all sections are 5,000 pounds of production or sales and \$5,000 of value of sales with the following exceptions: Plastics and resin materials--50,000 pounds or \$50,000; pigments, medicinal chemicals, flavor and perfume materials, rubber-processing chemicals, and elastomers--1,000 pounds or \$1,000. They are usually given in terms of undiluted materials; however, products of 95 percent or more purity are considered to be 100 percent pure. Commercial concentrations are applied to dyes, certain plastics and resins, and a few solvents; such concentrations are specifically noted.

The statistics given in this report include data from all known domestic producers of the item covered and include the total output of each company's plants, i.e., the quantities produced for consumption within the producing plant, as well as the quantities produced for domestic and foreign sale. The quantities reported as produced, therefore, generally exceed the quantities reported as sold. Some of these differences, however, are attributable to changes in inventory.

The second table in each section lists all items for which data on production or sales have been reported, by primary manufacturers, identified by manufacturers' codes. Each code consists of not more than three capital letters which is assigned on a permanent basis.

The third table in each section is a directory, alphabetized by the codes of the manufacturers reporting in that section.

Table 1 of the Appendix is a directory, alphabetized by the names of the manufacturers reporting in all sections and includes their office addresses.

Table 2 of the Appendix summarizes and gives the competitive status of U.S. general imports in 1976 of benzenoid intermediates and finished benzenoid products, entered under schedule 4, parts 1B and 1C, of the Tariff Schedules of the United States.

Table 3 of the Appendix lists synonymous names for cyclic intermediates. Information on all synonymous names of the organic chemicals included in this report may be found in the *SOCMA Handbook: Commercial Organic Chemical Names*, published by the Chemical Abstracts Service of the American Chemical Society, or the *Colour Index* (Revised Third Edition), published jointly by the Society of Dyes and Colourists and the American Association of Textile Chemists and Colourists.

As specified in the reporting instructions sent to manufacturers, production and sales (unless otherwise specified) are defined as follows:

PRODUCTION is the total quantity of a commodity made available by ORIGINAL MANUFACTURERS ONLY within the customs territory of the United States (includes the 50 states, the District of Columbia, and Puerto Rico). It covers synthetic organic chemicals, specified crudes from petroleum and coal tar, and certain chemically described natural products, such as, alkaloids, enzymes, and perfume isolates. It is the sum--expressed in terms of 100% active ingredient unless otherwise specified in the reporting instructions--of the quantities:

Produced, separated, and consumed in the same plant or establishment. A commodity is considered separated either when it is isolated from the reaction system or when it is not isolated, but weighed, analysed, or otherwise measured. This includes byproducts and co-products that are not classifiable as waste materials;

¹ Title 18, U.S.C. 1905 and Title 44, U.S.C. 350B.

INTRODUCTION

Produced and not isolated, but directly converted to a finished or semifinished item not included in this report (e.g., polyester film, polyurethane tires, nylon fibers, bar soap, etc.). (See specific instructions in individual sections);
Produced and transferred to other plants or establishments of the same firm or 100%-owned subsidiaries or affiliates;
Produced and sold to, or bartered with, other firms (including less than 100% owned subsidiaries);
Produced for others under toll agreements (see general instructions);
Produced and held in stock.

PRODUCTION EXCLUDES:

Purification of a commodity, which is purchased by, or transferred from within, your company, unless inclusion of such processing is specifically requested in the reporting instructions for individual sections;
Intermediate products which are formed in the manufacturing process, but are not isolated from the reaction system—that is, not weighed, analyzed, or otherwise measured; except such products as described above as being produced and not isolated, but directly converted to a finished or semifinished item.
Materials that are used in the process but which are recovered for re-use or sale;
Waste products having no economic significance.

SALES are actual quantities of commodities sold by ORIGINAL MANUFACTURERS ONLY. Sales include the quantity and value of:

Shipments of a commodity for domestic use or for export, or segregation in a warehouse when title has passed to the purchaser in a bona fide sale;
Shipments of a commodity produced for you by others under toll agreements;
Shipments to subsidiary or affiliated companies, provided the ownership is less than 100%.

SALES EXCLUDES:

All intra-company transfers within a corporate entity;
All shipments to 100% owned subsidiary or affiliated companies;
All resales of imported or purchased material, including materials obtained by barter;
All shipments of a commodity produced for others under toll agreements.

VALUE OF SALES is the net selling price f.o.b. plant or warehouse, or delivered price. F.o.b. prices are preferred, but if they are not readily available from your records, delivered prices are acceptable.

SUMMARY

Combined production of all synthetic organic chemicals, tar, tar crudes, and primary products from petroleum and natural gas in 1976 was 289,292 million pounds—an increase of 17.3 percent over the output in 1975 (see table 1). Sales of these materials in 1976, which totaled 151,760 million pounds valued at \$33,657 million, were 11.3 percent larger than in 1975 in terms of quantity and 19.0 percent larger in terms of value. These figures include data on production and sales of chemicals measured at several successive steps in the manufacturing process, and therefore, they necessarily reflect some duplication.

In 1976 production of all synthetic organic chemicals, including cyclic intermediates and finished products, totaled 162,873 million pounds, or 4.9 percent more than the output in 1975. Cyclic intermediates showed an apparent decrease in production of 37.0 percent, however, several items previously included in this section were transferred to the section on primary products from petroleum and natural gas. This latter section, therefore, shows an inordinately high apparent increase in production. Pesticides and related products (1,364 million pounds), with a decline of 14.9 percent from 1975, was the only other section to exhibit a decline in production. Rubber-processing chemicals (384 million pounds) lead the increase with a gain of 37.6 percent; organic pigments (68 million pounds) were 36.4 percent greater than in 1975; flavor and perfume materials (129 million pounds) increased 27.1 percent; dyes (256 million pounds) increased 24.4 percent; plastics and resin materials (29,680 million pounds) increased 19.4 percent; elastomers (synthetic rubber) (5,386 million pounds) increased 17.6 percent; plasticizers (1,587 million pounds) increased 17.4 percent; medicinal chemicals (236 million pounds) increased 13.2 percent; and surface-active agents (4,582 million pounds) increased 5.4 percent. The sections on miscellaneous end-use chemicals and chemical products and miscellaneous cyclic and acyclic chemicals were previously included in the section listed as miscellaneous chemicals. Together these two new sections show an increase of 15.3 percent over the output of miscellaneous chemicals in 1975.

	-	83,553	-	-	33,912	-	-	7,137	-

¹ Percentages calculated from figures rounded to thousands.

² Because of rounding, figures may not add to the totals shown.

³ Estimated in part to avoid disclosing individual company operations.

⁴ The large increases in 1976 over 1975 for primary products from petroleum and natural gas, and decreases for cyclic intermediates were caused, in part, by the transfer, in 1976, of ethylbenzene, cyclohexane, styrene, m-xylene, o-xylene, p-xylene, and cumene, from the intermediates section to the primary products from petroleum and natural gas section.

⁵ Items in these two sections were previously included in the section named miscellaneous chemicals.

SYNTHETIC ORGANIC CHEMICALS, 1976

GENERAL

In this report synthetic organic chemicals are classified on the basis of their principal use as follows: cyclic intermediates, dyes, organic pigments, medicinal chemicals, flavor and perfume materials, plastics and resin materials, rubber-processing materials, elastomers, plasticizers, surface-active agents, pesticides and related products, miscellaneous end-use chemicals and chemical products, and miscellaneous cyclic and acyclic chemicals. Most of these groups are further subdivided either by use or by chemical composition. As intermediate chemicals are used in the manufacture of finished products, aggregate figures that cover both intermediates and finished products necessarily include considerable duplication.

Total production of synthetic organic chemicals (intermediates and finished products combined) in 1976 was 162,873 million pounds or 4.9 percent more than the output of 155,246 million pounds reported for 1975 and 55.5 percent more than the output of 104,711 million pounds reported for 1967 (see table 2). Sales of synthetic organic chemicals in 1976 amounted to 85,253 million pounds, valued at \$27,786 million, compared with 83,990 million pounds, valued at \$24,939 million in 1975 and 55,177 million pounds, valued at \$10,438 million in 1967. Production of all cyclic products (intermediates and finished products combined) in 1976 totaled 44,192 million pounds or 11.5 percent less than the 49,963 million pounds reported for 1975 and 32.0 percent more than the 33,479 million pounds reported for 1967, however, the transfer of several items, in 1976, from the cyclic intermediates section to the section on primary production from petroleum and natural gas has caused the output of cyclic products to appear much lower in relation to 1967 and 1975 than would otherwise have resulted. Production of all acyclic products in 1976 totaled 118,681 million pounds, or 12.7 percent more than the 105,283 million pounds reported for 1975 and 66.6 percent more than the 71,232 million pounds reported for 1967.

TAR

John J. Gersic

Coal tar is produced chiefly by the steel industry as a byproduct of the manufacture of coke; water-gas tar and oil-gas tar are produced by the fuel-gas industry. Production of coal tar, therefore, depends on the demand for steel; production of water-gas tar and oil-gas tar reflects the consumption of manufactured gas for industrial and household use. Water-gas and oil-gas tars have properties intermediate between those of petroleum asphalts and coal tar. Petroleum asphalts are not usually considered to be raw materials for chemicals.

The quantity of tar produced in the United States in 1976 was almost entirely coal tar, which amounted to 636 million gallons (see table 1). Production in 1976 was 1.4 percent less than the 646 million gallons of coal tar produced in 1975. Sales of coal tar in 1976 amounted to 291 million gallons compared with 285 million gallons in 1975. U.S. production of water-gas and oil-gas tars was not reported to the Commission for 1975 or 1976; production of these tars in 1968 amounted to 21 million gallons, according to trade publications.

Consumption of tar in 1976 amounted to an estimated 604 million gallons, of which 72 percent was consumed in distillation. Tar used by the producers as fuel amounted to 165 million gallons; a lesser amount, 5.5 million gallons, was consumed by coke-oven operators in miscellaneous uses (see table 1A).

TAR CRUDES

Tar crudes are obtained from coke-oven gas and by distilling coal tar, water-gas tar, and oil-gas tar. The most important tar crudes are benzene, toluene, xylene, creosote oil, and pitch of tar. Some of these products are identical with those obtained from petroleum. Data for materials obtained from petroleum are included, for the most part, with the statistics for like materials obtained from coke-oven gas and tars, and are shown in table 1 and 1B.

Domestic production of industrial and specification grades of benzene reported by coke-oven operators and petroleum refinery operators in 1976 amounted to 1,425 million gallons--39.2 percent more than the 1,024 million gallons reported for 1975. These statistics include data for benzene produced from light oil and petroleum. Sales of benzene by coke-oven operators and petroleum refiners in 1976 amounted to 637 million gallons compared with 548 million gallons in 1975. In 1976 the output of toluene (including material produced for use in blending in aviation fuel) amounted to 999 million gallons--42 percent more than the 705 million gallons reported for 1975. Sales of toluene in 1976 were 618 million gallons

compared with 441 million gallons in 1975. The output of xylene in 1976 (including that produced for blending in motor fuels) was 722 million gallons, compared with 639 million gallons in 1975. Over 99 percent of the 722 million gallons of xylene produced in 1976 was obtained from petroleum sources.

Production (or sales) figures on crude naphthalene from coal-tar oils in 1976 could not be published without disclosing the operations of individual companies. Production of petroleum-derived naphthalene in 1976 amounted to 107 million pounds, compared with 110 million pounds in 1975. Production figures on road tar for 1976 cannot be published; in 1972 production amounted to 30 million gallons.

Some of the products obtained from tar and included in the statistics in table 1 are obtained from other products for which data are also included in the table. The statistics, therefore, involve considerable duplication, and for this reason no group totals or grand totals are given.

Data for 1976 tar crudes were supplied by 9 companies and company divisions.

SECTION I

Tar and Tar Crudes

Extensive revisions were made to the 1976 SOC questionnaire. These revisions were made after consultation with an industry task force, government agencies, and considerable reflection on what the finished report's objectives should be.

A new subsection B (Inventory and Capacity of Selected Items for Fuel, Chemical and Other Uses) was added to the questionnaire for Section I; its purpose was to obtain inventory and capacity data on benzene, toluene, xylenes and benzene-toluene-xylenes concentrate. These data will increase the value of the report to its users. However, so few of the respondents have yet completed subsection B that it is not possible to publish a meaningful compilation of these data at this time.

Organic Chemicals From Coal

Although coal-tar chemicals have been around a long time, the manufacture of coal-tar dyestuffs, medicinals, and photographic chemicals was relatively unimportant in the United States until after World War I. Prior to that time Germany dominated the world's production and trade, accounting for three-fourths of world production of coal-tar dyes and even more of that of coal-tar medicinals. U.S. shortages caused by the war, coupled with increases in U.S. import duties on dyestuffs and related products, encouraged U.S. capital investment in a domestic dye industry. 1/

Coal remained the basis of the world's synthetic organic chemicals industry through the 1930's, until the development of petrochemical processes, which was due at least in part to the abundance of relatively cheap petroleum. The U.S. petrochemical industry was developed during World War II to supply synthetic materials to replace natural products which were unavailable. The industry expanded considerably after the war with the discovery of large Middle East oilfields.

Because of the availability of petroleum and its easy transport, it rapidly displaced coal as the primary fossil fuel, and at the same time petrochemicals largely displaced coal-tar chemicals.

Prospects for the "chemicals from coal" industry

Traditionally, the major source of "chemicals from coal" has been the light oils produced as coke-oven byproducts during the carbonization of coal. These oils contain benzene, toluene, and xylene along with lesser amounts of other chemicals. Few coke ovens are built today for any purpose other than the production of metallurgical coke, most of which has been used in blast furnaces for steel production. But today, owing to the use of supplemental fuels in blast furnaces, the consumption of coke per ton of metal produced is decreasing and will probably continue to decrease, at least in the near future, although metal production will probably continue to increase.

If there is to be a renaissance of production of chemicals from coal, new technology must play a leading part. Of particular concern are high manufacturing costs, sulfur content problems, and the increasing tendency of producers of light oils to sell these oils to petroleum refineries, which process them along with their petroleum fractions. This, however, does not mean that customary processes will be replaced entirely. For example, in the United Kingdom there are presently three producers of coal liquids producing some 19,000 barrels of chemical feedstock a day, with projected production of 22,000 barrels a day by 1980. 2/

1/ United States Tariff Commission, Dyes and Other Coal-Tar Chemicals, 1918, p.11.

2/ Oil and Gas Journal, Dec. 5, 1975, p. 82.

About a 10-percent increase in the price of naphtha or gas oil adds about 2 cents a pound to the ethylene transfer price, 1/ which would make ethylene from coal economically competitive.

Currently, aromatics from coal are roughly competitive with those from petroleum. The following tabulation contains cost data from aromatics arrived at in the Chem Systems study: 2/

<u>Process</u>	<u>Aromatic cost</u> <u>(cents per gallon)</u>
Hydropyrolysis	52
Crude oil processing	60
H-coal	64
COED <u>3/</u>	78

Overall, it therefore appears that chemicals from coal will probably increase in importance in the future. With our large coal deposits, raw materials should be readily available. In addition, expected domestic shortages of crude petroleum could be partially alleviated by the diversion of feedstocks intended for petrochemical manufacture to fuel uses, thus decreasing import dependence. Further, depending upon the relative prices of coal and crude petroleum, chemicals from coal could help the United States increase its healthy trade surplus in chemicals.

Trade

Though imports of benzene, toluene, and xylene doubled from 1971 to 1976 (from \$48 million to \$96 million), exports increased more than elevenfold (from \$13 million to \$156 million). The largest growth was in toluene exports, which rose from \$2.6 million in 1971 to \$75.2 million in 1976.

Benzene has had a negative trade balance (in both volume and value) since 1971. This has been due to the availability of cheap benzene from overseas sources. Imports decreased in 1976, and exports increased to the point that the trade balance was less unfavorable than in the preceding 5 years. In 1977, as the world continues to emerge from recession, benzene exports could exceed imports again, as last happened in 1970.

Toluene had a negative trade balance from 1969 through 1973. In each year since 1974 the trade balance has become increasingly favorable. Most of the toluene exports are used for octane improvement of gasoline and as solvents. As decreasing quantities of additives are permitted to improve octane, the demand for certain aromatics, including toluene, should continue to rise. However, while this means an increasing export market for toluene, it is possible that increasing demand in the United States could prevent our export trade from increasing as rapidly as otherwise might be expected.

New technology

New developments in coal technology are centered, essentially, in the areas of combined fuels/chemicals operations, synthetic natural gas, coal-chemical complexes, and flash hydrogenation. The last is the newest and perhaps the most promising route to a more attractive chemical product mix from coal. The principal products are benzene, toluene, xylene, char, and smaller quantities of methane and ethane. The aromatics would be used to make other chemicals or in gasoline. The methane would be the feedstock for synthetic natural gas, while the ethane would be the feedstock for producing ethylene. The development of flash hydrogenation is principally funded by the Government, although some private funds have also been invested in research and development. The Energy Research and Development Administration is deeply involved and has at least four outside principal contractors. 1/

The coal-chemical complexes could include synthetic natural gas plants, flash hydrogenation facilities, and acetylene-processing hardware. Such complexes could lead to a quadrupling of coal's share of markets for a dozen key chemicals from 1.6 percent in 1975 to 6.6 percent in 1985. 2/

A plan linking together 11 major process steps into a "comprehensive combined energy and petrochemicals production complex" has been presented by a prominent engineering firm at a national technical society meeting. 3/ The complex is designed to consume 66,000 tons of coal a day and produce 17 major products, including 1 billion pounds of ethylene and 434 million pounds of propylene a year, 34 million gallons of benzene, 16 million gallons of toluene and 71.5 million gallons of mixed xylenes a year and 2,395 tons of sulfur and 214 tons of ammonia a day. 4/ Assuming extensive development of such complexes, in 1980 and 1990 coal-derived chemicals could supply the following shares of U.S. demand for the following basic organic chemicals (in percent): 5/

	<u>1980</u>	<u>1990</u>
Ethylene-----	10.0	10.0
Propylene-----	8.2	8.2
Benzene-----	6.4	7.5
Toluene-----	3.8	4.6
Xylene-----	19.2	23.0

The yield pattern of chemicals from coal depends upon both the process and the type of coal used. A recent patent on flash hydrogenation indicates a yield of 46 percent benzene, plus minor amounts of toluene and

4/ Ibid., p. 8.

5/ Ibid., p. 33.

xylene. 1/ Another patent claims a 90-percent conversion of coal to liquids and gases, 2/ while an entrained-flow reactor using North Dakota lignite for feedstock yielded 15 percent benzene, 10 percent oils, 31 percent methane, 4 percent propane, and char and unreacted carbon. 3/ In general the major task for coal conversion technology is to increase the yields of gases and liquids at the expense of char and unreacted material.

Economics of coal chemicals vis-a-vis petrochemicals

To be commercially viable, any chemical-from-coal process must be able to compete with processes based on natural gas or petroleum. As most of the coal processes generate synthetic natural gas, the "wellhead" price of natural gas is obviously very important. It has been stated that coal-based projects are likely to be started as soon as the "wellhead" price reaches around \$3.00 per million Btu's. 4/ Currently, interstate natural gas is sold for a maximum of \$1.42 per thousand cubic feet (roughly 1 million Btu's), while intrastate natural gas, not being regulated, has been sold at times for as much as about \$2.50 per thousand cubic feet. The National Energy Plan proposes that "all new gas sold anywhere in the country from new reservoirs would be subject to a price limitation at the Btu equivalent of the average refiner acquisition price (without tax) of all domestic crude oil." Under this proposal the price would be approximately \$1.75 per thousand cubic feet at the beginning of 1978, 5/ and the refiner acquisition price of all domestic crude oil would have to reach approximately \$18.00 a barrel for natural gas to be priced at \$3.00 per thousand cubic feet. It appears that under the proposed oil pricing scheme outlined in The National Energy Plan such a price could only occur in the 1980's, assuming an inflation rate in the United States of 5 percent a year.

Ethylene-from-coal economics based on the two most promising coal-based routes (methanol homologation and dimethyl ether cracking) are compared with the petroleum-based routes in the following tabulation, which contain the transfer prices for ethylene which were arrived at in the Chem Systems study: 6/

<u>Process</u>	<u>Ethylene transfer price</u> <u>(cents per pound)</u>
Natural gas liquids cracking-----	16.61
Gas oil-----	17.24
Naphtha cracking-----	17.66
Dimethyl ether cracking-----	18.22
Methanol homologation-----	19.89
Coal syncrude-----	22.70

The xylene trade balance became positive in 1974 and has increased each year since. It had been negative in the previous 5 years. As with toluene, major end-uses include those as a gasoline octane improver and as a solvent. Exports have increased during each of the last 6 years and could continue, depending primarily on domestic xylene demand for use in nonleaded gasoline.

A renaissance in the chemicals-from-coal industry could greatly expand our trade surplus in benzene, toluene, and xylene. Lowered manufacturing costs resulting from technological breakthroughs in the production of aromatics from coal could enable the United States to maintain and possibly increase export markets even in the face of large-scale manufacture of aromatics in the Middle East.

TABLE 1.--TAR AND TAR CRUDES: U.S. PRODUCTION AND SALES, 1976

[Listed below are all tar crudes for which any reported data on production or sales may be published. (Leaders (...)) are used where the reported data are accepted in confidence and may not be published or where no data were reported.) Table 2 lists separately all products for which data on production and/or sales were reported and identifies the manufacturers of each]

Soft (water softening point less than 100° F): Coke-oven operators-----	1,000 tons-	516	274	25,347	92.507
Other ⁷ -----	1,000 tons-	798	710	75,093	105.765

¹ Unit value per gallon, pound, or ton as specified.

² Includes only data for coal tar reported to the Division of Fuels Data, U.S. Bureau of Mines, (Mineral Industry Surveys, Coke and Coal Chemicals, Feb. 11, 1977). Data on U.S. Production of water-gas tar and oil-gas tar are not collected by the U.S. International Trade Commission, but according to trade publications, production of these tars amounted to 21 million gallons in 1968.

³ Data reported by tar distillers are not included because publication would disclose the operations of individual companies.

⁴ Includes data for material produced for use in blending motor fuels. The annual production statistics for petroleum refiners on benzene, toluene, and xylene are not comparable with the combined monthly production figures because of fiscal year revisions.

Production of Tar and Creosote--Continued

In 1976, production of coal-tar solution containing creosote (100% solution basis) amounted to 52,439 thousand gallons; sales were 36,076 thousand gallons valued at 17,526 thousand dollars, with a unit value of \$0.486 per gallon.

Includes data for crude light oil, solvent naphtha, pyridine crude bases, crude tar-acid oils, crude cresylic acid, methylnaphthalene, crude tar for other uses, unspecified tar distillates, road tar and refined anthracene, crude tetralin, crude coal tar solvent, carbon black, and primary and refractory oil.

Includes pitch emulsion, medium and hard pitch, and small amounts of soft pitch.

Note.--Statistics for materials produced in coke and gas-retort ovens are compiled by the Division of Fuels Data, U.S. Bureau of Mines, Department of the Interior. Statistics for materials produced in tar and petroleum refineries are compiled by the U.S. International Trade Commission.

TABLE 1A.--TAR: U.S. PRODUCTION AND CONSUMPTION, 1975 AND 1976

(In thousands of gallons)			
Product	1975	1976	
PRODUCTION			
Coal tar from coke-oven byproduct plants, total ¹ -----	645,537	636,382	
CONSUMPTION			
Total-----	617,235	604,376	
Tar consumed by distillation, total-----			
Coal tar distilled or topped by coke-oven operators ¹ -----	173,147	163,051	
Coal tar and water-gas tar distilled by tar distillers ² ---	272,012	270,696	
Tar consumed by the producers chiefly as fuel ¹ -----	162,112	165,169	
Coal tar consumed at coke-oven plants in miscellaneous uses ¹ -----	4,964	5,460	

¹ Reported to the Division of Fuels Data, U.S. Bureau of Mines.

² Reported to the U.S. International Trade Commission. Represents tar purchased from companies operating coke-ovens and gas-retort plants and distilled by companies operating tar-distillation plants. Statistics also include tar consumed other than by distillation by tar distillers.

Pitch emulsion-----	JEN.

¹ Does not include manufacturers' identification codes for producers who report to the Division of Fuels Data, U.S. Bureau of Mines. Those producers are listed in the U.S. Bureau of Mines Mineral Industry Survey, November 6, 1976, entitled "Coke Producers in the U.S. in 1976."

TABLE 3.--TAR AND TAR CRUDES: DIRECTORY OF MANUFACTURERS, 1976

ALPHABETICAL DIRECTORY BY CODE

[Names of manufacturers that reported production or sales of tar and tar crudes to the U.S. International Trade Commission for 1976 are listed below in the order of their identification codes as used in table 2]

Code	Name of company	Code	Name of company
ASC	Allied Chemical Corp.	KPT	Koppers Co., Inc., Organic Materials Div.
CBT	Samuel Cabot, Inc.	KPT	Koppers Co., Inc., Roads Materials Div.
COP	Coopers Creek Chemical Corp.	NEV	Neville Chemical Co.
HUS	Husky Industries, Inc.	RIL	Reilly Tar & Chemical Corp.
JEN	Jennison-Wright Corp.		

Note.--Complete names and addresses of the above reporting companies are listed in table 1 of the appendix.

PRIMARY PRODUCTS FROM PETROLEUM AND NATURAL GAS

John J. Gersic and J. Röss Lewis, Jr.

Primary products that are derived from petroleum and natural gas¹ are related to the intermediates and finished products made from such primary materials in much the same way that crude products derived from the distillation of coal tar are related to their intermediates and finished products. Many of the primary products derived from petroleum are identical with those derived from coal tar (e.g., benzene, toluene, and xylene). Considerable duplication exists in the statistics on the production and sales of primary petroleum products because some of these primary chemicals are converted to other primary products derived from petroleum and because data on some production and sales are reported at successive stages in the conversion process. The statistics are sufficiently accurate, however, to indicate trends in the industry. Many of the primary products for which data are included in the statistics may be used either as fuel or as basic materials from which to derive other chemicals. In this report every effort has been made to exclude data on materials that are used as fuel; however, data are included on toluene and xylene which are used in blending aviation and motor fuel.

The output of primary products derived from petroleum and natural gas as a group amounted to 112,873 million pounds in 1976. Production in 1975 was 78,089 million pounds. However, these totals can not be compared owing to transfer of items from the cyclic intermediates section to this section.²

The output of aromatic and naphthenic products from petroleum amounted to 48,167 million pounds in 1976, compared with 20,605 million pounds in 1975. Sales amounted to \$2,757 million in 1976 and \$897 million in 1975. The output of 1° and 2° benzene from petroleum in 1976 (9,827 million pounds) was 40.0 percent more than the 7,019 million pounds produced in 1975.

Production of all aliphatic hydrocarbons and derivatives from petroleum and natural gas was 64,706 million pounds in 1976, compared with 57,484 million pounds in 1975. Sales of these products were valued at \$2,732 million in 1976 compared with \$2,091 million in 1975. Production of ethylene was 22,475 million pounds in 1976--9.6 percent more than the 20,499 million pounds produced in 1975. The output of 1,3-butadiene in 1976 (3,507 million pounds) increased from the production in 1975 (2,597 million pounds). Production of 1,3-butadiene (3,682 million pounds) in 1974 was a record production.

Data for 1976 crude products from petroleum and natural gas for chemical conversion were supplied by 77 companies and company divisions.

¹ Statistics on aromatic chemicals from coal tar are given in the report on "Tar and Tar Crudes."

² Items transferred from cyclic intermediates are ethylbenzene, cyclohexane, styrene, m-xylene, o-xylene, p-xylene.

SECTION II

Primary Products from Petroleum and Natural Gas
For Chemical Conversion

Three new subsections (i.e., A, B and D) were added to the 1976 SOC questionnaire for Section II. These sections were added after consultation with Government agencies, an industry task force, and extensive discussion with users of the report.

Each of the added subsections were designed to fulfill a particular need. Subsection A (Production and Sales of Selected Items for Fuel, Chemical and Other Uses) was designed to capture all of the basic aromatics and olefins that are produced regardless of use. Subsection B (Inventory and Capacity of Selected Items for Fuel, Chemical and Other Uses) was added to obtain inventory and capacity data for the basic aromatics and olefins. Subsection D's (Captive Uses of C₁ to C₄ Aliphatic Hydrocarbons for Use as Petrochemical Feedstock for Your Own Use) purpose was to capture all (nine) of the lower aliphatic hydrocarbons used as chemical feedstocks. Few respondents have yet supplied data; in many cases those sections completed must be corrected. Therefore, it is not possible to publish summaries of these sections at this time.

Olefins and Aromatics

Though the terms "olefins" and "aromatics" cover many products, most of the comments here will be directed toward ethylene, propylene, benzene, toluene, and xylene. These are the most important "building block" raw materials for all synthetic organic chemicals and are principally derived from petroleum and natural gas. They are used to make products such as chemical intermediates, plastics, synthetic fibers, synthetic rubber, pesticides, and detergents.

Primary products from petroleum and natural gas

Of the top 50 chemicals ranked by production in 1976, as compiled by a reputable trade publication, 11 were organic chemicals classifiable in section II of this report. These organic chemicals are listed in the following table by rank in the top 50 chemicals in 1975 and 1976; also included are average annual U.S. production growth rates for the periods 1966-71 and 1971-76. Of those chemicals listed, the first four are the organic chemicals with the largest production volume.

Future growth for these building-block chemicals is expected to continue to be strong. An industry forecast indicates that ethylene demand is expected to increase at an average annual rate of 8 percent a year through the end of this decade and 6 percent a year in the early 1980's. 1/ The fastest growing ethylene derivatives and their growth rates are expected to be high-density polyethylene (12 percent a year) and vinyl acetate (10 percent a year). 2/ Propylene demand is predicted to grow at a faster rate (8.5 to 9 percent a year) than ethylene through 1985 by at least one industry observer. 3/ The fastest growing derivatives will be polypropylene (12 percent a year) and propylene oxide (10 percent per year). Benzene demand growth is forecast to average about 5.6 percent a year from 1976 to 1985; however, it could be lower owing to at least a partial change from benzene to other feedstocks for the manufacture of maleic anhydride and nylon intermediates. Furthermore, benzene exposure levels as set by the Occupational Safety and Health Administration could limit its use in certain applications and increase its cost. 4/

The toluene growth rate is forecast to decrease considerably to about 4.5 percent a year from 1976 to 1980; even lower growth rates are possible from 1980 to 1985. Styrene is an important derivative of ethylene and benzene, and in 1976 its production accounted for some 44 percent of the benzene demand and about 6 percent of the ethylene demand. For the past 16 years styrene demand has grown at an average annual rate of 8.2 percent; this rate is predicted to decrease to about 6 percent through 1980 and to 5 percent from

2/ Oil and Gas Journal, Mar. 28, 1977, p. 32.

3/ Chemical and Engineering News, Apr. 4, 1977, p. 10.

4/ Ibid., May 23, 1977, p. 10.

1980 to 1985. The fastest growing derivative from 1976 to 1980 is expected to be expanded polystyrene (12 percent a year.) Butadiene demand is expected to increase slowly through 1980 and then average 3.6 percent a year from 1980 to 1985. 1/

Changes in technology, production methods, and production centers

Among the major changes expected is the increasing use of heavier feedstock for ethylene production in the United States, with the result that increasing quantities of byproduct aromatics and butadiene will become available. It is also possible that increasing quantities of olefins and aromatics destined as such or in derivative form for world trade will be made in crude-petroleum- and natural-gas-producing countries, principally those in the Organization of Petroleum Exporting Countries (OPEC). Unlike the feedstock picture in the United States, ethane is expected to be the principal steam cracker feedstock for OPEC. Also, European plants using natural gas liquids from the North Sea are expected to be built.

The following tabulation indicates the feedstocks used to make ethylene in the United States in 1976 and the forecasts for 1980 (in percent): 2/

<u>Feedstock</u>	<u>1976</u>	<u>1980</u>
Ethane-----	46	40
Heavy liquids <u>1/</u> ----	27	48
Propane-----	25	10
Butane-----	2	2
Total-----	100	100

1/ Naphtha and gas oil.

As this switch to heavier feedstocks progresses, increasing quantities of byproducts such as propylene, butadiene, benzene, toluene, and xylene will become available, and the steam cracker will increase in importance as a source of these chemicals. In addition, fuels and other similar refinery products will also be made. Since the economic viability of a heavy liquids steam cracker will depend to a considerable extent upon obtaining good prices for these byproducts, it is expected that petroleum companies, rather than chemical companies, will build most of the future heavy-liquids steam cracker capacity.

Currently, most petrochemical plants are located in the consuming nations; that is, production and consumption centers are essentially the same, whether the feedstocks are produced domestically or imported. This situation is similar to that of petroleum refineries being situated in the consuming countries. However, the likelihood is that in the future

1/ Chemical and Engineering News, Sept. 13, 1976, p. 11.

2/ Ibid., Apr. 18, 1977, p. 12.

a significant number of both petrochemical and refining facilities will be built in areas rich in feedstock rather than in the consuming areas. These facilities would be economically viable because of exports rather than local market sales. The result would be a separation of production and consumption centers with an increase in trade. To maintain security of supply in such a situation there could be a trend toward protectionism by some of the consuming centers and an increase in the use of trade as a political weapon by others.

World trade and patterns

The United States has been a leading chemical-exporting nation at least partially because of lower feedstock costs compared with those in Europe and Japan. The U.S. advantage is traceable to price-controlled domestic crude petroleum, while most of the other current petrochemical-producing nations are much more reliant on petroleum imports at world price. As the U.S. price approaches the world price under The National Energy Plan most of this advantage should disappear. 1/ U.S. exports to Europe and to third-world markets may decrease. 2/ Those U.S. products particularly involved include benzene, cyclohexane, and p-xylene.

Also working to reverse the position of U.S. exports in the future will be the expected buildup of petrochemical facilities in OPEC countries and Mexico designed primarily to supply export markets. In addition, the availability of ethane from the North Sea could decrease costs in Europe and make European production more competitive in world markets.

A comprehensive petrochemical investment plan recently unveiled by Petroleos Mexicanos if completely implemented could result in Mexico becoming a major exporter by the early 1980's. 3/ At the same time a massive buildup of Middle East petrochemical capacity is expected; the questions appear to be how massive and when it will be. Those chemicals that will probably be favored in this buildup are ethylene, ammonia, polyethylene, aromatics, polyvinyl chloride, and methanol. 4/ The following tabulation from a leading industry periodical indicates the share of forecasted 1990 demand in the United States, Western Europe and Japan that the announced 1990 Arab capacity would account for, as follows (in percent): 5/

<u>Product</u>	<u>United States</u>	<u>Western Europe</u>	<u>Japan</u>
Ethylene-----	18	16.6	52
Propylene-----	5	4	11.5
Butadiene-----	7.5	10	21.5
Benzene-----	6.5	9	16.5
o-Xylene-----	15	10	44
p-Xylene-----	8	19	19
Vinyl chloride-----	21.5	12.5	31.5
Styrene-----	16.5	12.5	31.5
Polyethylene, low density----	27.8	12.5	89
Polyethylene, high density----	14	17.5	58
Polypropylene-----	8	7.5	19

1/ Chemical and Engineering News, May 23, 1977, p. 7.

2/ See "Organic Chemicals From Coal," p.10, for comments on the possibility of coal helping the United States remain a major organic exporter in the future.

5/ Hydrocarbon Processing, Dec., 1976, p. 116.

There is no unanimity among industry observers as to the competitive problems olefins (and derivatives) facilities using natural gas liquids from the North Sea and OPEC countries could cause U.S. industry. This lack of unanimity is to a large extent due to differing assumptions as to the degree of host-country financial and subsidizing incentives that will be forthcoming to encourage such investment. It is generally accepted that under certain conditions such facilities could become competitive, particularly with new heavy-liquids steam cracker facilities in the United States. 1/ It has been indicated that the major advantages for the Middle East lie with those products that are energy intensive and have the lowest capital requirements. 2/ On the other hand, a leading foreign transporter of liquefied gases has forecast that olefins will be transported by refrigerated tankers from producing sites to countries around the world, where they would be made into the various derivatives. 3/

Aromatics manufacture in future export centers around the world is also possible, especially at those centers with refining capacity. The Middle East might be at a disadvantage because much of its crude petroleum lacks the large quantities of aromatics precursors found in crude petroleum from other geographic areas. In addition, gas-liquids steam crackers do not produce as byproducts the quantities of aromatics produced by heavy-liquids steam crackers. However, aromatics, being liquids, are more easily handled and transported than are the olefins. While ethylene and propylene would be among the most expensive chemicals to ship, benzene, toluene, and xylene would be relatively inexpensive. Accordingly, most of the Middle East countries do have active aromatics projects.

Probably the most attractive markets for exports from the Middle East and North Africa would be via the Suez Canal to--

- (1) Europe via Mediterranean and North Sea ports,
- (2) The U.S. east coast, and
- (3) The U.S. gulf coast.

Movements to the east via the Strait of Malacca would most likely go to--

- (1) Japan
- (2) The U.S. west coast,
- (3) South America via Capetown, and
- (4) India. 4/

From the above it is obvious that the United States is a prime future export market for Middle East production. It would also be looked to as the prime market by producers in both Canada and Mexico. All of this is not surprising.

4/ C. Van Den Brink, Middle East Petrochemical Logistics, Chemical Marketing Research Association Meeting, Houston, Tex., Feb. 11-14, 1975.

The United States is a favorably located, sophisticated market which will probably be beset by increasing domestic production costs, and as such would be expected to be attractive to those nations and companies seeking to increase exports. The outlook may seem unfavorable for the domestic petrochemical industry as a whole, although individual petrochemical companies may invest and produce in nations with favorable feedstock positions. The domestic organic chemical industry may also be aided by the large coal reserves and increasing production if economically favorable chemicals-from-coal processes can be implemented. 1/

¹ Calculated from rounded figures.

² The chemical raw materials designated as aromatics are in some cases identical with those obtained from the distillation of coal tar; however, the statistics given in the table above relate only to such materials as are derived from petroleum and natural gas. Statistics on production or sales of benzene, toluene, and xylene from all sources are given in tables 1 and 18 of the report "Tar and Tar Crudes."

³ Includes toluene, solvent grade, 90 percent.

⁴ Includes toluene and xylene used as solvents, as well as that which is blended in aviation and motor gasoline.

⁵ Includes data for alkyl aromatics, crude cresylic acid, distillates, solvents, and miscellaneous cyclic hydrocarbons.

⁶ Production figures on acetylene from calcium carbide for chemical synthesis are collected by the U.S. Bureau of the Census.

⁷ Includes data for refinery propylene.

⁸ The statistics represent principally the butene content of crude refinery gases from which butadiene is manufactured.

⁹ Includes data for butanes, 1-butene, and mixed C₄ streams.

¹⁰ Includes data for C₅ hydrocarbon mixtures, pentanes, and piperylenes.

¹¹ Includes data for the following molecular weight ranges: C₆-C₇; C₈-C₁₀; C₈-C₁₀; C₁₀-C₁₆; C₁₁-C₁₅; C₁₂-C₁₄; C₁₄-C₁₆; C₁₅-C₂₀; C₁₄-C₁₈; and C₁₆-C₃₀.

¹² Includes data for methyl, ethyl, propyl, butyl, octyl, nonyl, decyl, hexadecyl, and miscellaneous mercaptans, and other hydrocarbon derivatives.

¹³ Includes data for following chain lengths: C₆-C₈; C₆-C₉; C₁₀-C₁₄; C₁₀-C₁₆; C₁₅-C₁₇; and others.

¹⁴ Includes data for di-isobutylene, methane, octanes, mixtures of C₂ and C₃ hydrocarbons, triisobutylene, and other hydrocarbons, and sales of acetylene, heptene, C₉-C₁₅ hydrocarbons, mixed heptenes and others.

TABLE 2.--PRIMARY PRODUCTS FROM PETROLEUM AND NATURAL GAS FOR CHEMICAL CONVERSION WHICH U.S. PRODUCTION AND/OR SALES WERE EITHER REPORTED OR ESTIMATED IDENTIFIED BY MANUFACTURER, 1976

(CHEMICALS FOR WHICH SEPARATE STATISTICS ARE GIVEN IN TABLE 1 ARE MARKED BELOW WITH A "M"; CHEMICALS NOT SO MARKED DO NOT APPEAR IN TABLE 1 BECAUSE THE REPORTED DATA ARE ACCEPTED IN CONFIDENCE AND MAY NOT BE PUBLISHED.)

MANUFACTURERS' IDENTIFICATION CODES SHOWN BELOW ARE TAKEN FROM TABLE 3 IN "M" SIGNIFIES THAT THE MANUFACTURER DID NOT CONSENT TO HIS IDENTIFICATION WITH THE DESIGNATED PRODUCT. COMPANY IDENTIFICATION CODES WHICH ARE FOLLOWED BY AN "(E)" ARE SO LABELED BECAUSE THE COMPANY FAILED TO SUPPLY TO SUPPLY THE U. S. INTERNATIONAL TRADE COMMISSION WITH THEIR DATA IN SUFFICIENT TIME FOR ITS INCLUSION IN THIS REPORT. THE COMPANY IS PRESUMED TO HAVE CONTINUED PRODUCTION OF THE COMPOUND IN QUESTION IN 1976 AND THE VOLUME OF PRODUCTION AND SALES HAS BEEN ESTIMATED BY THE USITC STAFF MEMBERS)

CONVERSION: DIRECTOR OF MANUFACTURERS, 1976

ALPHABETICAL DIRECTORY BY CODE

[Names of manufacturers that reported production or sales of primary products from petroleum and natural gas for chemical conversion to the U.S. International Trade Commission for 1976 are listed below in the order of their identification codes as used in table 2]

Code	Name of company	Code	Name of company
ACC	Amoco Chemicals Corp.	KPP	Arco/Polymers, Inc.
ACU	Allied Chemical Corp., Union Texas Petroleum Div.	KPT	
AIP	Air Products & Chemicals, Inc.	MCB	Borg-Warner Corp., Borg-Warner Chemicals
AMO	Amoco Oil Co.	MNO	Monochem, Inc.
AMO	Amoco Texas Refining Co.	MOC	Marathon Oil Co., Texas Refining Div.
APF	American Petrofina Co. of Texas	MON	Monsanto Co.
APR	Atlas Processing Co.		
ASH	Ashland Oil, Inc.	NWP	Northern Petrochemical Co.
ATR	Atlantic Richfield Co.		
		OCC	Oxirane Chemical Co.
BFG	B. F. Goodrich Co., B. F. Goodrich Chemical Co. Div.	OMC	Olin Corp.
BRP	BP Oil, Inc.	PAN	Amoco Production Co.
		PAS	Penwalt Corp.
CBN	Cities Service Co., Petrochemical Div.	PLC	Phillips Petroleum Co.
CCP	Crown Central Petroleum Corp.	PPR	Phillips Puerto Rico Core, Inc.
CLK	Clark Chemical Co.	PRD	Ferro Corp., Productol Chemical Div.
CO	Continental Oil Co.	PTT	Petro-Tex Chemical Corp.
COL	Collier Carbon & Chemical Corp.	PUE	Puerto Rico Olefins Co.
COR	Commonwealth Oil & Refining Co., Inc.		
CPI	Commonwealth Petrochemicals, Inc.	RH	Rohm & Haas Co.
CPX	Chemplex Co.		
CPY	Copolymer Rubber & Chemical Corp.	SHC	Shell Oil Co., Shell Chemical Co. Div.
CSD	Cosden Oil & Chemical Corp.	SHO	Shell Oil Co.
CSO	Cities Service Co.	SIO	Standard Oil Co. (Ohio).
CSP	Coastal States Petrochemical Co.	SKO	Getty Refining & Marketing Co.
		SM	Mobil Oil Corp. & Mobil Chemical Co.
DOW	Dow Chemical Co.	SNO	SunOlin Chemical Co.
DUP	E. I. duPont de Nemours & Co., Inc.	SNT	Sunride Refining Co.
		SOC	Standard Oil Co. of California, Chevron Chemical Co.
EKX	Eastman Kodak Co., Texas Eastman Co. Div.	SOG	Charter International Oil Co.
ELP	El Paso Products Co.	STY	Styrochem Corp.
ENJ	Exxon Chemical Co. U.S.A.	SUN	Sun Oil Co.
		SWC	Corco Cyclohexane, Inc.
FG	Foster Grant Co., Inc.	TBO	Tauber Oil Co.
FRS	Firestone Tire & Rubber Co., Firestone Synthetic Rubber & Latex Co. Div.	TID	Getty Refining & Marketing Co.
		TNA	Ethyl Corp.
GOC	Gulf Oil Corp., Gulf Oil Chemicals Co.-U.S.	TOC	Tenneco Oil Co.
GRS	Champlin Petroleum Co.	TUS	Texas-U.S. Chemical Co.
		TX	Texaco, Inc.
HCR	Hercor Chemical Corp.	UCC	Union Carbide Corp.
HES	Amerada Hess Corp. (Hess Oil Virgin Islands Corp.)	UOC	Union Oil Co. of California
HMY	Humphrey Chemical Co.	USI	National Distillers & Chemicals Corp., U.S. Industrial Chemicals Co.
JCC	Jefferson Chemical Co., Inc.	VEL	Velsicol Chemical Corp.

Note.--Complete names and addresses of the above reporting companies are listed in table 1 of the appendix.

CYCLIC INTERMEDIATES

Roger Adams

Cyclic intermediates are synthetic organic chemicals derived principally from petroleum and natural gas and from coal-tar crudes produced by destructive distillation (pyrolysis) of coal. Most cyclic intermediates are used in the manufacture of more advanced synthetic organic chemicals and finished products, such as dyes, medicinal chemicals, elastomers (synthetic rubber), pesticides, and plastics and resin materials. Some intermediates, however, are sold as end products without further processing. For example, refined naphthalene may be used as a raw material in the manufacture of 2-naphthol or of other more advanced intermediates, or may be packaged and sold as a moth repellent or as a deodorant. In 1976 about 39 percent of the total output of cyclic intermediates was sold; the rest was consumed chiefly by the producing plants in the manufacture of more advanced intermediates and finished products.

Total product of cyclic intermediates in 1976 amounted to 19,796 million pounds. Sales of cyclic intermediates in 1976 were 7,664 million pounds, valued at \$2,387 million. These totals cannot be compared with 1975 figures because several items were transferred to the primary products from petroleum and natural gas section.¹

Intermediates whose production exceeded 1 billion pounds in 1976 were dimethyl terephthalate (7,211 million pounds), and phenol (2,121 million pounds). Other large-volume intermediates produced in 1976 were isocyanates (948 million pounds), phthalic anhydride (902 million pounds), cyclohexanone (641 million pounds), aniline (544 million pounds), dodecylbenzene (529 million pounds), bisphenol A (449 million pounds), nitrobenzene (409 million pounds), 2,4 (and 2,6)-dinitrotoluene (396 million pounds), monochlorobenzene (329 million pounds), and 2,4-dinitrotoluene (328 million pounds). The 12 chemicals noted above accounted for 75 percent of the total output of intermediates in 1976.

¹ Items transferred from cyclic intermediates to primary products from petroleum and natural gas are ethylbenzene, cyclohexane, styrene, m-xylene, o-xylene, p-xylene, and cumene.

TABLE 1.--CYCLIC INTERMEDIATES: U.S. PRODUCTION AND SALES, 1976

[Listed below are all cyclic intermediates for which any reported data on production and/or sales may be published. (Leaders (...)) are used where the reported data are accepted in confidence and may not be published or where no data were reported.) Table 2 lists alphabetically all cyclic intermediates on which data on production and/or sales were reported and identifies the manufacturers of each]

CYCLIC INTERMEDIATES	SALES

Salicylaldehyde-----	4,414	2,864	7,173	2.50
Salicylic acid, tech. grade-----	31,265	3,968	3,298	.83
Terephthalic acid, dimethyl ester ⁴ -----	7,210,613
Toluene-2,4-diamine (4-m-Tolylenediamine)-----	233,103
7,7'-Ureylenebis[4-hydroxy-2-naphthalenesulfonic acid] (J Acid urea)-----	338
All other cyclic intermediates-----	4,005,927	4,073,814	1,289,882	.32

¹ Calculated from rounded figures.

² Does not include data for coke ovens and gas-retort ovens, reported to the Division of Fuels Data, U.S. Bureau of Mines.

³ Figures include (o,m,p)-cresol from coal tar and some m-cresol and p-cresol.

⁴ The figures for terephthalic acid, dimethyl ester (DMT) include both the acid itself and the dimethyl ester.

CYCLIC INTERMEDIATES

TABLE 2.---CYCLIC INTERMEDIATES FOR WHICH U.S. PRODUCTION AND/OR SALES WERE EITHER REPORTED OR ESTIMATED, IDENTIFIED BY MANUFACTURER, 1976

(CHEMICALS FOR WHICH SEPARATE STATISTICS ARE GIVEN IN TABLE 1 ARE MARKED BELOW WITH A "B"; CHEMICALS NOT SO MARKED DO NOT APPEAR IN TABLE 1 BECAUSE THE REPORTED DATA ARE ACCEPTED IN CONFIDENCE AND MAY NOT BE PUBLISHED.)

MANUFACTURERS IDENTIFICATION CODES SHOWN BELOW ARE TAKEN FROM TABLE 3, AND "X" SIGNIFIES THAT THE MANUFACTURER DID NOT CONSENT TO HIS IDENTIFICATION WITH THE DESIGNATED PRODUCT. COMPANY IDENTIFICATION CODES WHICH ARE FOLLOWED BY AN " (B) " ARE SO LABELED BECAUSE THE COMPANY FAILED TO SUPPLY THE U. S. INTERNATIONAL TRADE COMMISSION WITH THEIR DATA IN SUFFICIENT TIME FOR ITS INCLUSION IN THIS REPORT. THE COMPANY IS PRESUMED TO HAVE CONTINUED PRODUCTION OF THE COMPOUND IN QUESTION IN 1976 AND THE VOLUME OF PRODUCTION AND SALES HAS BEEN ESTIMATED BY THE USITC STAFF MEMBERS)

TABLE 3.--CYCLIC INTERMEDIATES: DIRECTORY OF MANUFACTURERS, 1976

ALPHABETICAL DIRECTORY BY CODE

[Names of manufacturers that reported production or sales of cyclic intermediates to the U.S. International Trade Commission for 1976 are listed below in the order of their identification codes as used in table 2]

Code	Name of company	Code	Name of company
ABB	Abbott Laboratories	GIV	Givaudan Corp.
AC	American Color & Chemical Corp.	GLY	Glyco Chemicals, Inc.
ACC	Amoco Chemical Corp.	GNT	General Tire & Rubber Co., Chemical/Plastics Div.
ACS	Allied Chemical Corp., Specialty Chemicals Div.	GOC	Gulf Oil Corp., Gulf Oil Co., Chemical Co.-U.S.
ACY	American Cyanamid Co.	GP	Georgia-Pacific Corp., Rebecca Chemical Div.
ADC	Anderson Development Co.	CYR	Goodyear Tire & Rubber Co.
AIP	Air Products & Chemicals, Inc.	HEX	Hexagon Laboratories, Inc.
ALD	Aldrich Chemical Co., Inc.	HK	Hooker Chemicals & Plastics Corp.
ALF	Allied Chemical Corp., Fibers Div.	HN	Tenneco Chemicals, Inc.
ALL	Alliance Chemicals, Inc.	HPC	Hercules, Inc.
AMB	American Bio-Synthetics Corp.	HSC	Chemetron Corp., Pigments Div.
ARA	Araphahoe Chemical, Inc. Sub/Syntax Corp. (U.S.A.)	HSB	Harshaw Chemical Co. Div. of Kewanee Oil Co.
ARK	Armstrong Cork Co.	HST	American Hoechst Corp.: Hoechst Fibers Industries Rhode Island Works
ARS	Arsynco, Inc.	ICC	Inmont Corp.
ARZ	Arizona Chemical Co.	ICI	ICI United States, Inc., Specialty Chemicals Group
ASH	Ashland Oil, Inc., Ashland Chemical Co.	IMC	IMC Chemical Group, Inc.
ASL	Ansul Chemical Co.	JCC	Jefferson Chemical Co., Inc.
ATR	Atlantic Richfield Co.	KF	Kay-Fries Chemicals, Inc.
BAS	BASF Wyandotte Corp.	KLM	Kalama Chemical, Inc.
BJL	Burdick & Jackson Laboratories, Inc.	KPT	Koppers Co., Inc., Organic Materials Div.
BUC	Synalloy Corp., Blackman-Uhler Chemical Div.	LAK	Lakeway Chemicals, Inc.
CCW	Cincinnati Milacron Chemicals, Inc.	LEM	Napp Chemicals, Inc.
CEL	Celanese Corp., Celanese Chemical Co.	LIL	Eli Lilly & Co. and Puerto Rico
CGY	Ciba-Geigy Corp.	MAL	Mallinckrodt Chemical Works
CHL	Chemol, Inc.	MAY	Otto B. May, Inc.
CLX	Clark Chemical Corp.	MCB	Borg-Warner Corp.: Marbon Chemical Div. Weston Chemical Co.
CMC	Nyanza, Inc.	MER	Merichem Co.
CNP	Nipro, Inc.	MIL	Milliken Co., Milliken Chemical Div.
CO	Continental Oil Co.	MLC	Melamine Chemicals, Inc.
CRS	Carus Chemical Co.	MNR	Monroe Chemical Co.
CSD	Cosden Oil & Chemical Co.	MOB	Mobay Chemical Co.
CWN	Upjohn Co., Fine Chemicals Div.	MON	Monsanto Co.
DBC	Dow Badische Co.	MRA	Bostik South, Inc.
DCC	Dow Corning Corp.	MRK	Merck & Co., Inc.
DOW	Dow Chemical Co.	MRT	Morton Chemical Co. Div. of Morton Norwich Products, Inc.
DUP	E.I. duPont de Nemours & Co., Inc.	MTO	Montrose Chemical Corp. of California
DVC	Dover Chemical Corp. Sub of ICC Industries, Inc.	NCI	Union Camp Corp.
EGR	Eagle River Chemical Corp.	NEP	Nepera Chemical Co., Inc.
EK	Eastman Kodak Co.:	NES	Nease Chemical Co., Inc.
EKT	Tennessee Eastman Co. Div.	NIL	Nilok Chemicals, Inc.
ELP	El Paso Products Co.	NOR	Norwich Parmacal Co.
ENJ	Exxon Chemical Co. U.S.A.	NPC	Northwest Petrochemical Corp.
FER	Ferro Corp., Ottawa Chemical Div.		
FG	Foster Grant Co., Inc.		
FIN	Hexcel Corp., Fine Organics Div.		
FMP	FMC Corp., Industrial Chemical Div.		
FMT	Fairmount Chemical Co., Inc.		
FST	First Chemical Corp.		
GAF	GAF Corp., Chemical Div.		
GE	General Electric Co.		

TABLE 3.--CYCLIC INTERMEDIATES: DIRECTORY OF MANUFACTURERS, 1976--CONTINUED

Code	Name of company	Code	Name of company
OMC	Olin Corp.	SOC	Standard Oil Co. of California, Chevron Chemical Co.
OPC	Orbis Products Corp.	STC	American Hoechst Corp., Sou-Tex Works
ORO	Chevron Chemical Co.	STG	Stange Co.
ORT	Roehr Chemicals, Inc.	STP	Stepan Chemical Co.
OTC	Story Chemical Corp., Ott Div.	STY	Styrochem Corp.
PAS	Pennwalt Corp.	SW	Sherwin-Williams Co.
PCW	Pfister Chemical, Inc.	TCC	Tanatex Chemical Corp.
PD	Parke, Davis & Co. Sub. of Warner-Lambert Co.	TCH	Emery Industries, Inc., Trylon Chemical Div.
PFZ	Pfizer, Inc. & Pfizer Pharmaceutical, Inc.	TEN	Cities Service Co., Copperhill Operations
PIT	Pitt-Consol Chemical Co.	TKL	Thiokol Corp.
PLC	Phillips Petroleum Co.	TNA	Ethyl Corp.
PPG	PPG Industries, Inc.	TOC	Tenneco Oil Co.
PRD	Ferro Corp., Productol Chemical Div.	TRC	Toms River Chemical Corp.
PTO	Puerto Rico Chemical Co., Inc.	TRD	Manufacturing Enterprises, Inc., Squibb Manufacturing, Inc., Trade Enterprise, Inc., Ersana, Inc.
PTT	Petro-Tex Chemical Corp.	TX	Texaco, Inc.
QKO	Quaker Oats Co.	UCC	Union Carbide Corp.
RBC	Fike Chemicals, Inc.	UOP	UOP, Inc., UOP Chemical Div.
RCI	Reichhold Chemicals, Inc.	UPF	Jim Walter Resources, Inc.
RDA	Rhodia, Inc.	UPJ	Upjohn Co.
RH	Rohm & Haas Co.	USR	Uniroyal, Inc., Chemical Div.
RIL	Reilly Tar & Chemical Corp.	USS	USS Chemicals Div. of U.S. Steel Corp.
RPC	Millmaster Onyx Corp., Refined-Onyx Div.	VAL	Valchem Corp.
RSA	R.S.A. Corp.	VGC	Virginia Chemicals, Inc.
RUC	Rubicon Chemicals, Inc.	VPC	Mobay Chemical Corp., Verona Div.
SAL	Salsbury Laboratories	VTC	Vicksburg Chemical Co. Div. of Vertac Consolidated
SAR	Sartomer Industries, Inc.	WAY	Philip A. Hunt Chemical Corp., Organic Chemical Div.
SCC	Standard Chlorine of Delaware, Inc.	WIL	Inolex Corp., Inolex Pharmaceutical Div.
SCN	Schenectady Chemicals, Inc.	WTC	Witco Chemical Co., Inc.
SDC	Martin-Marietta Corp., Sodyeco Div.	WTH	Union Camp Corp., Chemical Div., Dover Plant
SDH	Sterling Drug, Inc.:	WTL	Pennwalt Corp., Lucidol Div.
SDW	Hilton-Davis Chemical Co. Div.	WYT	Wyeth Laboratories, Inc., Wyeth Laboratories Div. of American Home Products Corp.
SFA	Winthrop Laboratories Div.		
SFC	Stauffer Chemical Co.:		
SFS	Agricultural Div.		
SHC	Calbio Chemicals, Inc.		
SK	Specialty Chemical Div.		
SKO	Shell Oil Co., Shell Chemical Co. Div.		
SNT	Smith, Klein & French Laboratories		
	Getty Refining & Marketing Co.		
	Suntide Refining Co.		

Note.--Complete names and addresses of the above reporting companies are listed in table 1 of the appendix.

DYES

DYES

Edmund Cappuccilli

Synthetic dyes are derived in whole or in part from cyclic intermediates. Approximately two-thirds of the dyes consumed in the United States are used by the textile industry to dye natural and synthetic fibers or fabrics; about one-sixth is used for coloring paper; and the rest is used chiefly in the production of organic pigments and in the dyeing of leather and plastics. Of the several thousand different synthetic dyes that are known, more than one thousand are manufactured by one or more domestic producers. The large number of dyes results from the many different types of materials to which dyes are applied, the different conditions of service for which dyes are required, and the costs that a particular use can bear. Dyes are sold as pastes, powders, lumps, and solutions; concentrations vary from 6 percent to 100 percent. The concentration, form, and purity of a dye are determined largely by the use for which it is intended.

Total domestic production of dyes in 1976 amounted to 256 million pounds, or 24.4 percent greater than the 206 million pounds produced in 1975 (table 1). Sales of dyes in 1976 amounted to 250 million pounds, valued at \$620 million, compared with 209 million pounds, valued at \$476 million, in 1975. In terms of quantity, sales of dyes in 1976 were 19.7 percent greater than in 1975 and in terms of value, 30.4 percent greater. The average unit value of sales of all dyes in 1976 was \$2.48 per pound compared with \$2.28 per pound in 1975.

In general, the production of the six classes of dyes increased substantially in 1976. Acid dyes increased by 50.5 percent from 18.7 million pounds in 1975 to 28.2 million in 1976. The other five classes of dyes increased by the following percentages: basic dyes (24.5), direct dyes (32.3), disperse dyes (13.7), fluorescent brightening agents (13.0), and vat dyes (25.4).

TABLE 1.--DYES: U.S. PRODUCTION AND SALES, 1976

[Listed below are all dyes for which any reported data on production or sales may be published. (Leaders (...) are used where the reported data are accepted in confidence and may not be published or where no data were reported.) Table 2 lists all dyes for which data on production and/or sales were reported and identifies the manufacturers of each]

TABLE I.--DYES: U.S. PRODUCTION AND SALES, 1976--CONTINUED

DYES	PRODUCTION	SALES		
		QUANTITY	VALUE	UNIT VALUE ¹
	1,000 pounds	1,000 pounds	1,000 dollars	Per pound
VAT DYES--Continued				
Vat black dyes, total-----	3,519	3,534	6,200	\$1.75
Vat Black 25, 12-1/2%-----	1,840	1,996	3,329	1.67
Vat Black 27, 12-1/2%-----	360	239	731	3.05
All other-----	1,319	1,299	2,140	1.65
All other vat dyes-----	35,396	41,770	38,460	.92
All other dyes ² -----	20,355	19,998	30,605	1.53

¹ Calculated from rounded figures.

² The data include dyes which are similar to, but not chemically identical with, the indicated Colour Index name.

³ The data include azoic compositions, azoic coupling components, oxidation bases, ingrain dyes, sulfur dyes, and miscellaneous dyes. Statistics for those groups of dyes may not be published separately because publication would disclose information received in confidence.

TABLE IA.--DYES: U.S. PRODUCTION AND SALES, BY CLASS OF APPLICATION, 1976

CLASS OF APPLICATION	PRODUCTION	SALES		
		QUANTITY	VALUE	UNIT VALUE ¹
	1,000 pounds	1,000 pounds	1,000 dollars	Per pound
Total-----	256,250	269,887	620,294	\$2.48
Acid-----	28,248	27,006	87,108	3.23
Azoic dyes and components:				
Azoic diazo components, bases (Fast color bases)--	532	467	989	2.12
Azoic diazo components, salts (Fast color salts)--	1,370	1,350	1,572	1.16
Basic-----	14,595	14,889	49,770	3.34
Direct-----	33,527	31,606	78,772	2.49
Disperse-----	39,100	36,289	138,019	3.80
Fiber-reactive-----	3,506	3,982	21,876	5.49
Fluorescent brightening agents-----	43,429	37,948	55,464	1.46
Food, drug, and cosmetic colors-----	5,757	5,110	31,754	6.21
Mordant-----	660	656	2,149	3.28
Solvent-----	11,940	11,509	35,341	3.07
Vat-----	53,231	59,077	86,876	1.47
All other ² -----	20,355	19,998	30,604	1.53

¹ Calculated from rounded figures.

² The data include azoic composition, azoic coupling components, oxidation base, ingrain dyes, sulfur dyes, and miscellaneous dyes. Statistics for these groups of dyes may not be published separately because publication would disclose information received in confidence.

TABLE 2.--DYES FOR WHICH U.S. PRODUCTION AND/OR SALES WERE EITHER REPORTED OR ESTIMATED, IDENTIFIED BY MANUFACTURER, 1976

(CHEMICALS FOR WHICH SEPARATE STATISTICS ARE GIVEN IN TABLE 1 ARE MARKED BELOW WITH A "M"; CHEMICALS NOT SO MARKED DO NOT APPEAR IN TABLE 1 BECAUSE THE REPORTED DATA ARE ACCEPTED IN CONFIDENCE AND MAY NOT BE PUBLISHED. MANUFACTURERS' IDENTIFICATION CODES SHOWN BELOW ARE TAKEN FROM TABLE 3. AN "X" SIGNIFIES THAT THE MANUFACTURER DID NOT CONSENT TO HIS IDENTIFICATION WITH THE DESIGNATED PRODUCT. COMPANY IDENTIFICATION CODES WHICH ARE FOLLOWED BY AN "(E)" ARE SO LABELED BECAUSE THE COMPANY FAILED TO SUPPLY THE U. S. INTERNATIONAL TRADE COMMISSION WITH THEIR DATA IN SUFFICIENT TIME FOR ITS INCLUSION IN THIS REPORT. THE COMPANY IS PRESUMED TO HAVE CONTINUED PRODUCTION OF THE COMPOUND IN QUESTION IN 1976 AND THE VOLUME OF PRODUCTION AND SALES HAS BEEN ESTIMATED BY THE USITC STAFF MEMBERS.)

		WJ	Warner-Jenkinson Manufacturing Co.

Note.--Complete names and addresses of the above reporting companies are listed in table 1 of the appendix.

ORGANIC PIGMENTS

David B. Beck and Edmund Cappuccilli

Organic pigments are toners and lakes derived in whole or in part from benzenoid chemicals and colors.

Statistics on production and sales of all organic pigments in 1976 are given in table 1.¹ For a few important pigments already reported in table 1, supplemental data on sales by commercial forms are reported in table 1A. Individual toners and lakes are identified in this report by the names used in the third edition of the Colour Index.

Total production of organic pigments in 1976 was 67.7 million pounds--36.4 percent more than the 49.9 million pounds produced in 1975 and 3.0 percent less than the 69.8 million pounds produced in 1974. Total sales of organic pigments in 1976 amounted to 54.2 million pounds, valued at \$261.1 million, compared with 42.4 million pounds, valued at \$186.0 million, in 1975 and 58.5 million pounds, valued at \$227.8 million, in 1974. In terms of quantity, sales of organic pigments in 1976 were 27.9 percent greater than in 1975 and 7.3 percent smaller than in 1974; in terms of value, sales in 1976 were 40.3 percent greater than in 1975 and 14.6 percent greater than in 1974.

Production of toners in 1976 amounted to 66.0 million pounds--38.3 percent more than the 47.7 million pounds reported in 1975. Sales in 1976 were 52.8 million pounds, valued at \$256.7 million, compared with 40.8 million pounds, valued at \$182.1 million, in 1975. Sales in 1976 were 29.5 percent greater than those in 1975 in terms of quantity, and 40.9 percent greater in terms of value. The individual toners listed in the report which were produced in the largest quantities in 1976 were Pigment Yellow 12, 7.8 million pounds; Pigment Blue 15, beta form, 6.5 million pounds; Pigment Red 49, barium toner, 4.6 million pounds, and Pigment Red 53, barium toner, 3.3 million pounds.

Production of lakes totaled 1.7 million pounds in 1976--11.6 percent less than the 1.9 million pounds reported for 1975. Sales of lakes in 1976 amounted to 1.4 million pounds, valued at \$4.4 million, compared with sales in 1975 of 1.6 million pounds, valued at \$3.9 million. Sales in 1976 were 12.6 percent less than those in 1975 in terms of quantity, and 11.7 percent greater in terms of value.

For each of 8 selected pigments, or groups of pigments, table 1A gives data on sales by commercial forms. Pigment Yellow 12, Pigment Red 53, barium toner, and Pigment Blue 15, beta form, were sold principally in the flushed form. The remaining 5 pigments, or groups of pigments, for which statistics are published were sold principally in the dry full-strength form. Statistics on sales by commercial forms could not be published for Pigment Blue 15, beta form, Pigment 49, barium toner, Pigment Red 49, calcium toner and Pigment Red 52, without revealing the operations of individual companies.

¹ See also table 2 which lists these products and identifies the manufacturers by codes. These codes are listed in table 3.

TABLE 1.--ORGANIC PIGMENTS: U.S. PRODUCTION AND SALES, 1976

[Listed below are all organic pigments for which any reported data on production or sales may be published. (Leaders (...)) are used where the reported data are accepted in confidence and may not be published.) Table 2 lists separately all organic pigments for which data on production or sales were reported and identifies the manufacturers of each.]

See footnotes at end of table.

TABLE 1.--ORGANIC PIGMENTS: U.S. PRODUCTION AND SALES, 1976--CONTINUED

ORGANIC PIGMENTS	PRODUCTION	QUANTITY	SALES VALUE ¹	UNIT VALUE ²
	1,000 pounds dry basis ³	1,000 pounds dry basis ³	1,000 dollars	per pound
TONERS--Continued				
Violet toners, total--continued-----				
Pigment Violet 3, C.I. 42 535, PTA-----	43	34	312	\$ 9.25
Pigment Violet 23, C.I. 51 319-----	292	232	4,504	19.45
All other-----	1,545	1,311	19,339	14.75
Blue toners, total-----	14,219	12,074	56,678	4.69
Pigment Blue 1, C.I. 42 595, PMA-----	84	97	810	8.33
Pigment Blue 15, C.I. 74 160 alpha form-----	3,967	3,323	18,159	5.46
Pigment Blue 15:3, C.I. 74 160, beta form-----	6,479	5,191	24,984	4.81
Pigment Blue 15:4, C.I. 74 160, beta form-----	163
All other-----	3,526	3,463	12,725	3.67
Green toners, total-----	3,801	3,303	21,732	6.58
Pigment Green 2, C.I. 42 040 and 49 005, PMA-----	17	23	208	9.12
Pigment Green 2, C.I. 42 040 and 49 005, PTA-----	12	9	117	12.52
Pigment Green 7, C.I. 74 260-----	3,260	2,783	17,712	6.36
Pigment Green 36, C.I. 74 265-----	226	250	1,788	7.14
All other-----	286	238	1,907	8.01
Brown and black toners, total-----	460	295	834	2.83
Pigment Brown 5, C.I. 15 800-----	...	29	127	4.38
All other-----	460	266	707	2.66
LAKES				
Total-----	1,707	1,393	4,382	3.15
Red lakes:				
Pigment Red 60, C.I. 16 105-----	321	312	1,188	3.81
Pigment Red 83, C.I. 58 000-----	59	49	298	6.05
Violet lake: Pigment Violet 5, C.I. 58 055-----	104	91	437	4.82
Blue lakes-----	678	750	2,058	2.75
All other lakes-----	545	191	401	2.10

¹ The value of sales from toners are reported on a dry full-strength basis and the value of sales for lakes are reported on a dry form basis. All sales value data exclude the additional costs of processing or packaging in commercial forms other than the dry full-strength or dry form.

² Totals and "all other" unit values calculated from rounded figures.

³ Quantities for toners are reported as dry full-strength toner content, excluding the weight of any dispersing agent, vehicle, or extender. Quantities for lakes are reported as dry lake content, excluding the weight of any dispersing agent or vehicle.

Note.--The C.I. (Colour Index) numbers shown in this report are the identifying numbers given in the third edition of the Colour Index.

The abbreviations PMA and PTA stand for phosphomolybdic and phosphotungstic (including phosphotungstomolybdic) acids, respectively.

ORGANIC PIGMENTS

TABLE 1A.--U.S. SALES OF SELECTED DRY FULL-STRENGTH COLORS, DRY EXTENDED COLORS, DRY DISPERSIONS, AQUEOUS DISPERSIONS, AND FLUSHED COLORS, 1976

[Listed below are supplemental sales data, by commercial forms, of selected pigments that have been reported in table 1]

SELECTED PIGMENTS BY COMMERCIAL FORMS	SALES ¹		
	QUANTITY	VALUE	UNIT VALUE ²
	1,000		
	dry basis ³	1,000 dollars	per pound
Pigment Yellow 12, C.I. 21 090, total-----	5,223	17,917	\$3.43
Dry full-strength toner-----	1,632	5,398	3.31
Flushed color-----	3,529	12,311	3.49
Aqueous dispersion ⁴ and dry dispersions ⁵ -----	62	207	4.32
Pigment Yellow 13, C.I. 21 100; Pigment Yellow 14, C.I. 21 095; Pigment Yellow 17, C.I. 21 105; and other benzidine yellows, total-----	2,597	9,748	3.75
Dry full-strength toner-----	1,521	5,657	3.72
Aqueous dispersions ⁴ -----	726	2,698	3.72
Flushed color-----	337	1,336	3.97
Dry extended toner and dry dispersions ⁵ -----	13	56	4.18
Pigment Red 3, C.I. 12 120, total-----	1,635	5,672	3.47
Dry full-strength toner-----	1,015	3,497	3.44
Dry extended toner, aqueous dispersions ⁴ , and flushed color ⁵ -----	620	2,175	3.51
Pigment Red 48:2 calcium toner, C.I. 15 865, total-----	1,647	7,062	4.29
Dry full-strength toner-----	1,436	6,077	4.23
Dry extended toner, dry dispersion aqueous dispersions ⁴ and flushed color ⁵ -----	211	985	4.67
Pigment Red 53:1, C.I. 15 585, barium toner, total-----	2,633	7,228	2.75
Aqueous dispersions ⁴ -----	18	50	2.80
Flushed color-----	1,784	4,911	2.75
Dry dispersion and dry full-strength toner-----	831	2,267	2.73
Pigment Red 57:1, calcium toner, C.I. 15 850, total-----	1,938	8,230	4.25
Flushed color-----	1,507	6,423	4.26
Dry full-strength toner, dry extended toner, and aqueous dispersions ^{4,5} -----	431	1,807	4.19
Pigment Blue 15, C.I. 74 160, alpha form, total-----	3,323	18,159	5.46
Dry full-strength toner-----	1,385	8,032	5.85
Aqueous dispersions ⁴ -----	842	4,121	4.89
Dry dispersions, dry extended toner, and flushed color ⁵ -----	1,096	6,006	5.48
Pigment Green 7, C.I. 74 260, total-----	2,783	17,712	6.36
Dry full-strength toner-----	1,458	9,052	6.21
Flushed color-----	445	3,157	7.09
Aqueous dispersions ⁴ -----	683	4,079	5.97
Dry extended toner and dry dispersions ⁵ -----	197	1,424	7.23

¹ Sales quantities are identical in tables 1 and 1A; the sales value data in 1A generally exceed the value in table 1 because table 1A includes the additional processing and packaging costs of the various commercial forms.

² Calculated from whole figures.

³ Quantity of the various commercial forms is given in terms of dry full-strength toner content.

⁴ Includes presscake.

⁵ Separate data on these commercial forms may not be published without revealing the operation of individual companies.

Note.--The C.I. (Colour Index) numbers shown in this report are the identifying numbers given in the third edition of the Colour Index.

The abbreviations PMA and PTA stand for phosphomolybdic and phosphotungstic (including phosphotungstomolybdic) acids respectively.

TABLE 2.--ORGANIC PIGMENTS FOR WHICH U.S. PRODUCTION AND/OR SALES WERE EITHER REPORTED OR ESTIMATED, IDENTIFIED BY MANUFACTURER, 1976

(CHEMICALS FOR WHICH SEPARATE STATISTICS ARE GIVEN IN TABLE 1 ARE MARKED BELOW WITH A "Q"; CHEMICALS NOT SO MARKED DO NOT APPEAR IN TABLE 1 BECAUSE THE REPORTED DATA ARE ACCEPTED IN CONFIDENCE AND MAY NOT BE PUBLISHED. MANUFACTURERS IDENTIFICATION CODES SHOWN BELOW ARE TAKEN FROM TABLE 3. AND "Q" SIGNIFIES THAT THE MANUFACTURER DID NOT CONSENT TO HIS IDENTIFICATION WITH THE DESIGNATED PRODUCT. COMPANY IDENTIFICATION CODES WHICH ARE FOLLOWED BY AN "E" ARE SO LABELED BECAUSE THE COMPANY FAILED TO SUPPLY THE U. S. INTERNATIONAL TRADE COMMISSION WITH THEIR DATA IN SUFFICIENT TIME FOR ITS INCLUSION IN THIS REPORT. THE COMPANY IS PRESUMED TO HAVE CONTINUED PRODUCTION OF THE COMPOUND IN QUESTION IN 1976 AND THE VOLUME OF PRODUCTION AND SALES HAS BEEN ESTIMATED BY THE USITC STAFF MEMBERS)

TABLE 3.--ORGANIC PIGMENTS: DIRECTORY OF MANUFACTURERS, 1976

ALPHABETICAL DIRECTORY BY CODE

[Names of organic pigment manufacturers that reported production or sales to the U.S. International Trade Commission for 1976 are listed below in the order of their identification codes as used in table 2]

Code	Name of company	Code	Name of company
ACS	Allied Chemical Corp., Specialty Chemicals Div.	KCW	Keystone Color Works, Inc.
ACY	American Cyanamid Co.	KUN	H. Kohnstamm & Co., Inc.
AMS	Ridgway Color & Chemical	LVR	C. Lever Co., Inc.
APO	Apollo Colors, Inc.	MGR	Magruder Color Co., Inc.
BAS	BASF Wyandotte Corp.	MRA	Bostik South, Inc.
BNS	Binney and Smith, Inc.	MRX	Max Marx Color & Chemical Co.
BOR	Borden, Inc., Printing Ink Div.	POP	Pope Chemical Corp.
BUC	Synalloy Corp., Blackman-Uhler Chemical Div.	ROM	United Merchants & Manufacturers, Inc., Roma Chemical Div.
CIK	Flint Ink Corp., Cal/Ink Div.	S	Sandoz, Inc., Colors & Chemicals Div.
DUP	E. I. duPont de Nemours & Co., Inc.	SDC	Martin-Marietta Corp., Sodyeco Div.
GAF	GAF Corp., Chemical Div.	SDH	Sterling Drug, Inc., Hilton-Davis Chemical Co. Div.
HPC	Hercules, Inc.	SNA	Sun Chemical Corp.
HSC	Chemetron Corp., Pigments Div.	SW	Sherwin-Williams Co.
HSB	Harshaw Chemical Co. Div. of Kewanee Oil Co.	TMS	Sterling Drug, Inc., Thomasset Colors Div.
HST	American Hoechst Corp., Rhode Island Works	TNI	Gillette Co., Chemical Div.
ICC	Inmont Corp.	UHL	Paul Uhlich & Co., Inc.

Note.--Complete names and addresses of the above reporting companies are listed in table 1 of the appendix.

MEDICINAL CHEMICALS

Tedford C. Briggs

Medicinal chemicals include the medicinal and feed grades of all organic chemicals having therapeutic value, whether obtained by chemical synthesis, by fermentation, by extraction from naturally occurring plant or animal substances, or by refining a technical grade product. They include antibiotics and other anti-infective agents, antihistamines, autonomic drugs, cardiovascular agents, central nervous system depressants and stimulants, hormones and synthetic substitutes, vitamins, and other therapeutic agents for human or veterinary use and for animal feed supplements.

The table shows statistics for production and sales of medicinal chemicals grouped by pharmacological class. The statistics shown are for bulk chemicals only; finished pharmaceutical preparations and products put up in pills, capsules, tablets, or other measured doses are excluded.¹ The difference between production and sales reflects inventory changes, processing losses, and captive consumption of medicinal chemicals processed into ethical and proprietary pharmaceutical products by the primary manufacturer. In some instances, the difference may also include quantities of medicinal grade products used as intermediates, e.g., penicillin G salts used as intermediates in the manufacture of semi-synthetic penicillins. All quantities are given in terms of 100-percent content of the pure bulk drug.

Total U.S. production of bulk medicinal chemicals in 1976 amounted to 235.8 million pounds, or 13.2 percent more than the 208.4 million pounds produced in 1975 and 4.0 percent less than the 246.5 million pounds produced in 1974. Total sales of bulk medicinal chemicals in 1976 amounted to 160.8 million pounds, valued at \$741.5 million, compared with sales in 1975 of 148.8 million pounds, valued at \$772.1 million, and sales in 1974 of 177.5 million pounds, valued at \$814.8 million.² In terms of quantity, sales in 1976 were thus 8.1 percent more than in 1975 and 9.0 percent less than in 1974. In terms of value, sales in 1976 were 4.0 percent less than in 1975 and 9.0 percent less than in 1974.²

Production of the more important groups of medicinal chemicals in 1976

¹ Complementary statistics on the dollar value of manufacturers' shipments of finished pharmaceutical preparations, except biologicals, are published annually by the U.S. Department of Commerce, Bureau of the Census, in Current Industrial Reports, Series MA-28G. Many pharmaceutical manufacturers who report to the Bureau of the Census are excluded from the U.S. International Trade Commission report because they are not primary producers of medicinal chemicals, that is, they do not themselves produce the bulk drugs which go into their pharmaceutical products but purchase their drug requirements from domestic or foreign producers.

² Sales value and, to a lesser extent, sales quantity were overstated in 1974 and 1975 because a company erroneously reported sales of an antibiotic in dosage form.

was as follows: Antibiotics, 20.5 million pounds (12.0 percent more than in 1975), of which 10.4 million pounds was for medicinal use and 10.0 million pounds was for other uses; anti-infective agents other than antibiotics, 27.6 million pounds (3.0 percent less than in 1975); central nervous system depressants and stimulants, 52.7 million pounds (10.5 percent more); and vitamins, 33.3 million pounds (11.2 percent more).

Production of some of the more important individual products listed in the table was as follows: Choline chloride, 47.0 million pounds (21.5 percent larger than in 1975); aspirin, 28.3 million pounds (11.2 percent more); penicillins (except semi-synthetic), 7.1 million pounds (21.0 percent more); tetracyclines, 5.7 million pounds (22.0 percent more); and vitamin E, 4.6 million pounds (111.5 percent more).

Medicinal Chemicals

According to a recent report the drug industry suffered continued declines in profit margins in 1976. ^{1/} The study surveyed the performance of 10 major drug firms which account for more than 50 percent of the industry's profits and sales. In 1976, before-tax profits for the 10 companies were 15.2 percent of sales, down from 18.1 percent in 1975, 19.6 percent in 1974, and 21.0 percent in 1973. After-tax profits of the 10 firms climbed 9.1 percent in 1976 from 1975, whereas sales went up 10.8 percent. After-tax profits as a percentage of sales sank, therefore, even lower than 1975, which had the lowest value in more than a decade.

One factor in the profit decline is that patents have been running out on whole families of drugs developed during the 1950's, resulting in increased competition, especially foreign, and lower prices and profits for those products. Another factor lowering profits is pressure by the Department of Health, Education, and Welfare for the prescribing of drugs by generic name rather than by the usually more costly brand-name products.

The drug industry benefits from heavy investment in offshore tax havens, chiefly Puerto Rico and Ireland. The tax rate for the 10 companies was 36.4 percent in 1976, up slightly from the 36.0-percent rate in 1975. Until 1976 the tax rate for drug companies had been dropping steadily since 1969, when it was 49 percent--the high point for the past decade.

One factor which would affect future growth in drug sales volume would be the passage of some form of national health insurance. With passage of such a program, the prescribing of drugs would be expected to increase.

The best hope for growth in drug profitability may be in the new generations of drugs. Here, the chief complaint from industry is Government regulations. Reportedly, before 1962, about 2 years usually elapsed between the discovery of a new drug and final approval by the Food and Drug Administration (FDA) for marketing. Now 7 to 10 years may be required because of increased time for tests to meet newer FDA regulations.

Future trends in the drug industry

Whole new generations of drugs, products of major breakthroughs in molecular biology and biochemistry, are building up in drug-company laboratories. Some have already been introduced abroad while others are awaiting FDA approval. Many of the newer drugs are hoped to be more specific in their actions so that they will attack only disease-causing agents or infected cells while having little or no toxic effect on the patient.

^{1/} "Drug Industry Performance Continues to Slip," Chemical and Engineering News, May 2, 1977, pp. 11-12.

The empirical approach to drug development, in which thousands of organic chemicals are tested for therapeutic effects, is now giving way to specific drug design in which medicinal chemicals are modified in ways that are likely to produce desired results. Computer programs are sometimes used in the complex strategy involved in deciding which changes to make in a drug molecule so that it will precisely fit its intended target in the human body.

Among the new drug developments is a custom-designed drug with highly promising results in the treatment of peptic ulcers; another development is an antiviral drug believed to be present in the human body in minute amounts. This drug may have broad-spectrum antiviral activity and may eventually be used to destroy cold and flu virus. Another discovery is a possibly nonaddictive analgesic more effective than morphine. Drug companies have developed new antihypertensive agents and at least one drug that may be useful in the treatment of chronic heart failure. Some scientists feel that drugs that control the levels of cyclic nucleotides in the body will be useful in treating asthma and other diseases.

Another new approach in medicinal chemistry is the development of new drugs resembling hormones that either produce a metabolic response or block or reduce such a response. Antihistamines are an example of older drugs of this type in that these antagonists prevent the hormone histamine from binding to cell receptor sites. Not since the days of the discovery and development of cortisone has a natural hormone attracted so much attention in endocrinology, chemistry, and pharmacology as have the prostaglandins. Most major drug companies have active drug development programs focused around the chemistry of these potent and multiaction natural hormones. In addition, receptor research recently led to the discovery of a new class of brain hormones which appear to mediate a large number of brain functions.

So, while the introduction of new drugs has slowed in the last 10 years, most drug companies remain optimistic about the future of the industry. In view of Government and industry spending, medicinal chemistry is one of the more active areas in the chemistry of the organic compounds. 1/

Production of drugs in Puerto Rico and in Ireland

Puerto Rico will strengthen its position as one of the principal producing areas for medicinal chemicals when a new \$70 million plant built by Hoffman-LaRoche reaches full production in 1978. 2/ Hoffman-LaRoche joins a host of other pharmaceutical companies with plants in Puerto Rico, including Eli Lilly, Upjohn, Squibb, Bristol Myers, Merck, Sharp and Dohme, Searle, Smith Kline & French, Warner-Lambert, Abbott, Johnson & Johnson, Parke Davis, Richardson Merrell, Baxter Travenol, Lenderele, Seifel, Pfizer, Schering Plough, Sterling Drug, and Endo Labs.

1/ Donald A. Buyske, "Drugs from Nature," Chemtech, June 1975, pp.361-369. "Future Drugs That Will Be Lifesavers," Fortune, December 1976, pp. 152-162.

2/ "Roche Opening of Pharmaceutical Unit Seen as Spur to Puerto Rico Drug Trade," Chemical Marketing Reporter, Dec. 12, 1976.

In 10 years the value of exports of drugs from Puerto Rico has increased from \$31.4 million in 1966 to \$352.6 million in 1976. Employment in the industry was up to 6,300 in 1976. The principal incentive for locating plants in Puerto Rico is the 10 to 30 years of tax exemption. Other factors are, reportedly, good worker productivity and a favorable climate.

Another area noted for its concentration of pharmaceutical plants is the Republic of Ireland. Production plants owned by 11 of the world's top 16 drug companies are located in Ireland. Ireland's attraction to drug producers, like that of Puerto Rico, is the tax exemption given for plants located in Ireland. Ireland gives complete tax exemption on export-derived profits until 1990, and Ireland reportedly exports over 95 percent of its drug production. There have been reports that changes will be imposed by the European Economic Community Commission in Brussels to reduce Ireland's tax holiday, presumably as part of its long-promised harmonization of European Community investment incentives. The Industrial Development Authority of Ireland declares, however, that there will be no changes in any existing agreements. Another incentive offered to industry by Ireland are grants ranging from \$6,000 to \$10,000 for each job created. ^{1/}

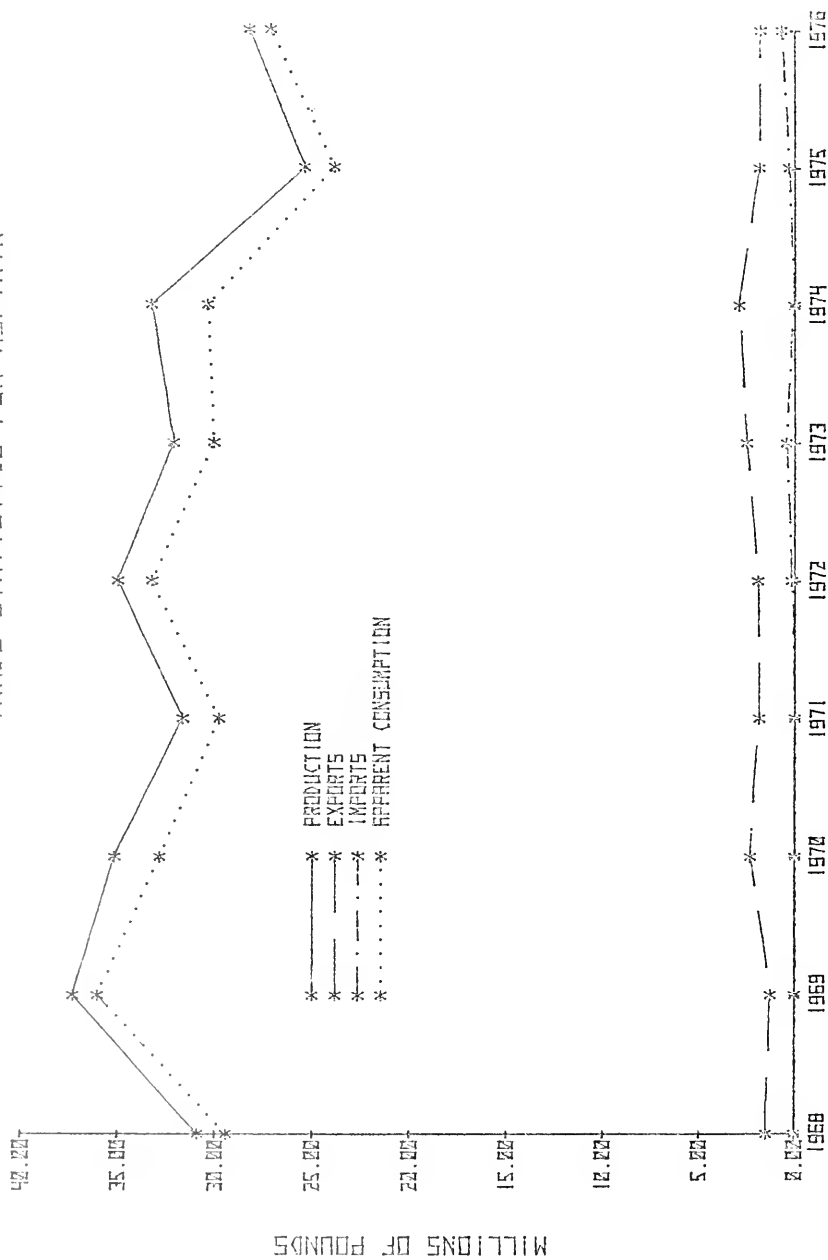

Production, foreign trade, consumption, and market trends of aspirin

Aspirin (acetylsalicylic acid) has been used to relieve pain, inflammation, and fever since 1899. Consumption of aspirin is probably more than that of any other drug with about 27 million pounds consumed during 1976 in the United States alone. The following figure shows a general declining trend in domestic aspirin production and consumption during 1968-76. The principal factor believed to be responsible for the decline in aspirin consumption is the substitution of acetaminophen by many individuals who formerly used aspirin. Imports are not yet a major factor in the aspirin market, accounting for less than 3 percent of domestic consumption in 1976. This does not mean, however, that imports of aspirin will not become important. And, in fact, there are reasons to expect that imports will capture an increasing share of the domestic market. Imports jumped from none in 1971 to 164,000 pounds in 1972 and 702,000 pounds in 1976. In 1975 almost all of the imports came from Poland, while in 1976 most of the imports of aspirin came from Poland and Romania. Exports of aspirin peaked in 1974 and declined in the 2 subsequent years.

The decline in aspirin consumption will probably not continue as aspirin remains one of the most effective drugs for the treatment of connective-tissue diseases such as arthritis. These diseases affect, to a varying degree, a large segment of the population with the incidence generally increasing with age. Demographers predict a steady increase in median age of the domestic population, and it is reasonable to predict increased use of the drugs effective in geriatrics. Domestic production may continue to decline as aspirin is a low-cost drug widely made throughout the world.

^{1/} "Another U.S. Pharmaceutical Project for Ireland," European Chemical News, Sept. 10, 1976.

TRADE STATISTICS FOR ASPIRIN

Production may shift to those countries that have the lowest production cost.

Studies are now underway to determine if aspirin is useful in preventing heart attacks. Aspirin is known to block prostaglandin synthesis and is being tested in a clinical study sponsored by the National Heart, Lung and Blood Institute to see whether aspirin can protect against heart attacks. It is known that some of the prostaglandins promote blood clotting and some scientists feel prostaglandins may be important in the processes causing heart attacks or stroke. However, the discovery in late 1976 that some of the prostaglandins inhibit blood clotting and arterial contraction has led some investigators to question whether taking aspirin would, in fact, prevent heart attacks. Perhaps the trial called the aspirin myocardial infarction study (AMIS) will answer these questions. The test group includes over 4,000 patients who have suffered at least one heart attack. The experimental phase of AMIS will be completed by August 1979, and the results will be closely watched by the medical profession.

In late 1976 a review panel studying nonprescription drugs for the FDA recommended that labeling of over-the-counter pain relievers, such as aspirin and acetaminophen, be restricted to indicate use for headaches, minor aches and pain, and fever. The panel also recommended warnings on the labels about the dangers of overdosage. Drug industry reaction to the recommendations was fear that the \$715 million market for the mild pain relievers would be severely hurt if patients are forced to rely on more expensive and powerful, and possibly more toxic, prescription drug products for relief of specific pain symptoms. The panel's recommendations were based upon its desire to curb what it feels is an overuse of nonprescription pain relievers. The FDA is studying the panel's proposals before taking action.

MEDICINAL CHEMICALS

TABLE 1.--MEDICINAL CHEMICALS: U.S. PRODUCTION AND SALES, 1976

[Listed below are all synthetic organic medicinal chemicals for which any reported data on production or sales may be published. Leaders (...) are used where the reported data are accepted in confidence and may not be published or where no data were reported.) Table 2 lists all medicinal chemicals for which data on production and/or sales were reported and identifies the manufacturers of each]

MEDICINAL CHEMICALS	PRODUCTION ¹		SALES ¹	
	1,000 pounds	1,700 pounds	QUANTITY	UNIT VALUE ²
			1,000 pounds	Per pound
Grand total-----	235,805	160,834	741,521	\$ 4.61
Acyclic-----	99,431	81,253	98,692	1.21
Benzenoid ³ -----	114,905	63,140	402,117	6.37
Cyclic nonbenzenoid ⁴ -----	21,469	16,441	240,712	14.64
Antibiotics, total ⁵ -----	20,472	6,520	211,529	32.44
Penicillins (except semisynthetic), total-----	7,132	2,888	34,365	11.90
Penicillin G, potassium for medicinal use-----	2,182
All other, for all uses-----	4,950	2,888	34,365	11.90
Semisynthetic penicillins, for medicinal use, total-----	1,433	485	43,121	88.91
Ampicillin-----	900
All other-----	533	485	43,121	88.91
Tetracyclines, for all uses-----	5,695	378	16,763	44.35
Other antibiotics, total-----	6,212	2,769	117,280	42.35
For medicinal use ⁶ -----	2,680	868	92,166	108.69
For nonmedicinal uses ⁷ -----	3,532	1,921	25,114	13.07
Antihistamines, total-----	489	231	6,459	27.96
Chlorpheniramine maleate-----	30
All other-----	459	231	6,459	27.96
Anti-infective agents (except antibiotics), total-----	27,640	15,693	72,412	4.61
Anthelmintics, total-----	11,133	6,116	36,363	5.95
Piperazine dihydrochloride-----	1,649	1,517	2,021	1.33
All other-----	9,484	4,599	34,342	7.47
Antifungal agents-----	820	870	1,310	1.51
Antiprotozoan agents-----	7,079	4,760	17,871	3.75

Vitamins, total-----	33,315	22,746	142,527	6.27
Vitamin B-----	8,017	8,705	38,783	4.46
Vitamin B ¹² -----	13	9	2,754	306.00
Vitamin E, total ¹⁰ -----	4,595	3,406	48,573	14.26
All other vitamins-----	20,690	10,626	52,417	4.93
Miscellaneous medicinal chemicals ¹¹ -----	41,400	29,517	37,034	1.25

¹ The data on production and sales are for bulk medicinal chemicals only; they exclude finished preparations and dosage-form products, which are manufactured from bulk chemicals. All quantities are given in terms of 100% active ingredients.

² Calculated from rounded figures.

³ The term "benzenoid" as used in this report, describes any cyclic medicinal chemical whose molecule contains either a six-membered carbocyclic ring with conjugated double bonds (e.g., the benzene ring or the quinone ring) or a six-membered heterocyclic ring with 1 or 2 hetero atoms and conjugated double bonds, except the pyrimidine ring (e.g., the pyridine ring or the pyrazine ring.)

⁴ Includes antibiotics of unknown structure.

⁵ With the exception of bacitracin, the penicillins (except semisynthetic), and a few other antibiotics which were reported in terms of U.S.P. units, all quantities for antibiotics were reported as kilograms (kg) of antibiotic base. (Thus production of 481 kg of tetracycline hydrochloride, for example, would have been reported as 444 kg of tetracycline base.) For inclusion in the statistical table, all quantities were converted from kg of antibiotic base to pounds of antibiotic base (1 kg = 2.2046 pounds), or from U.S.P. units to pounds (22.7 million units of bacitracin, 458 million units of procaine penicillin G, 723 million units of potassium penicillin G, etc. = 1 pound). Sales quantity and value are lower than in previous years because in previous years a significant quantity of an antibiotic in dosage form was reported incorrectly as sales.

⁶ Production of all antibiotics for medicinal use amounted to 10,438,000 pounds, sales amounted to 2,741,000 pounds, valued at \$162,299,000. Includes antifungal and antibacterial antibiotics.

⁷ Production of all antibiotics for animal feeds and other nonmedicinal uses amounted to 10,034,000 pounds, sales amounted to 3,779,000 pounds, valued at \$49,230,000.

⁸ Includes sales of urinary antiseptics.

⁹ Includes production and sales of amphetamines, general anesthetics, and stimulants; also includes sales of antidepressants and tranquilizers.

¹⁰ All quantities for vitamins A, B₁₂, D, and E were reported in terms of kg or units, but were converted to pounds for inclusion in the statistical table (1.317 billion units of vitamin A acetate; 0.824 billion units of vitamin A palmitate; 0.4536 kg of vitamins B₁₂; 18.14 billion units of vitamin D; 617,000 units of d-alpha tocopheryl acetate; 454,000 units of dl-alpha tocopheryl acetate, etc. = 1 pound.)

¹¹ Includes production and sales of antineoplastic agents, diagnostic agents, methionine (hydroxy analog, calcium salt), salicylic acid, smooth muscle relaxants, and unclassified medicinal chemicals.

TABLE 2.--MEDICINAL CHEMICALS FOR WHICH U.S. PRODUCTION AND/OR SALES WERE EITHER REPORTED OR ESTIMATED, IDENTIFIED BY MANUFACTURER, 1976

(CHEMICALS FOR WHICH SEPARATE STATISTICS ARE GIVEN IN TABLE 1 ARE MARKED BELOW WITH A "a"; CHEMICALS NOT SO MARKED DO NOT APPEAR IN TABLE 1 BECAUSE THE REPORTED DATA ARE ACCEPTED IN CONFIDENCE AND MAY NOT BE PUBLISHED. MANUFACTURERS' IDENTIFICATION CODES SHOWN BELOW ARE TAKEN FROM TABLE 3. AN "X" SIGNIFIES THAT THE MANUFACTURER DID NOT CONSENT TO HIS IDENTIFICATION WITH THE DESIGNATED PRODUCT. COMPANY IDENTIFICATION CODES WHICH ARE FOLLOWED BY AN "(E)" ARE SO LABELED BECAUSE THE COMPANY FAILED TO SUPPLY THE U. S. INTERNATIONAL TRADE COMMISSION WITH THEIR DATA IN SUFFICIENT TIME FOR ITS INCLUSION IN THIS REPORT. THE COMPANY IS PRESUMED TO HAVE CONTINUED PRODUCTION OF THE COMPOUND IN QUESTION IN 1976 AND THE VOLUME OF PRODUCTION AND SALES HAS BEEN ESTIMATED BY THE USIC STAFF MEMBERS)

MEDICINAL CHEMICALS	MANUFACTURERS' IDENTIFICATION CODES (ACCORDING TO LIST IN TABLE 3)
ANTIBIOTICS:	
ANTIFUNGAL AND ANTITUBERCULAR ANTIBIOTICS, FOR MEDICINAL USE:	
ANTIPUNGAL ANTIBIOTICS:	
AMPHOTERICIN B	OMS, TRD.
CANDICIDIN	PEN.

SULFADIMETHOXINE	HOF.
SULPAMERAZINE	ACY.

TABLE 2.--MEDICINAL CHEMICALS FOR WHICH U.S. PRODUCTION AND/OR SALES WERE EITHER REPORTED OR ESTIMATED, IDENTIFIED BY MANUFACTURER, 1976--CONTINUED

MEDICINAL CHEMICALS	MANUFACTURERS' IDENTIFICATION CODES (ACCORDING TO LIST IN TABLE 3)
@ANTI-INFECTION AGENTS (EXCEPT ANTIBIOTICS)--CONTINUED	
@SULFONAMIDES--CONTINUED	
SULFAMETHAZINE	ACY, LEM, ELS.
SULFAMETHAZINE, SODIUM	LEM, SAL.
SULFAMETHAZOLE	ACY.
SULFAMETHOXAZOLE	HOP.
SULFANILAMIDE	SAL.
SULFANILIC ACID	ED.
SULFANILIN	SAL.
SULFAPYRIDINE	ACY, LEM, SAL.
SULFATHIAZOLE	LEM, PER.
SULFATHIAZOLE, SODIUM	PER.
SULFISOXAZOLE	MRK, SAL.
@OTHER ANTI-INFECTION AGENTS:	
@ANTIFUNGAL AGENTS:	
BENZOIC ACID	MON.
CALCIUM UNDECYLENATE	WTL.
SODIUM CAPRYLATE	LEM.
UNDECYLENIC ACID	NL.
ZINC UNDECYLENATE	NL, WTL.
ANTILEPROTIC AND ANTITUBERCULAR AGENTS:	
AMINOSALICYLIC ACID	MLS.
ISONIAZID	RIL.
SODIUM AMINOSALICYLATE	MLS.
ANTIVIRAL AGENTS:	
AMANTADINE	ALD.
MERCURY COMPOUNDS:	
MEBROLEN	HYN.
THIERSOL	LIL.
@URINARY ANTISEPTICS:	
METHENAMINE HIPERATE	RIL.
METHENAMINE HANDELATE	ARN, NEF.
METHYLENE BLUE	ACY.
NITROFURANTOIN	MOR.
PHENAZOPYRIDINE HYDROCHLORIDE	HOP, NEF.
GENERAL ANTISEPTICS AND ANTIBACTERIAL AGENTS:	
AMINACRINE HYDROCHLORIDE	SDM.

TABLE 2.--MEDICINAL CHEMICALS FOR WHICH U.S. PRODUCTION AND/OR SALES WERE EITHER REPORTED OR ESTIMATED, IDENTIFIED BY MANUFACTURER, 1976--CONTINUED

MEDICINAL CHEMICALS	MANUFACTURERS' IDENTIFICATION CODES (ACCORDING TO LIST IN TABLE 3)
ANTI-INFECTIVE AGENTS (EXCEPT ANTIBIOTICS)--CONTINUED	
OTHER ANTI-INFECTIVE AGENTS--CONTINUED	
GENERAL ANTISEPTICS AND ANTIBACTERIAL AGENTS--CONTINUED	
TIRUED	
BENZALKONIUM CHLORIDE--	SDM.
BETANAPTHOL--	ACY.
BROMOPFORM--	DOM.
CABBADOX--	PEN, PPZ.
CETALKONIUM CHLORIDE	PIN, SDM.
CETILPYRIDINIUM CHLORIDE	PIN, HEX.
CHLOROBUTANOL--	SPS.
CHLOROTHYMOLO--	OPC.
8-HYDROXY-5-QUINOLINESULFONIC ACID	MRK.
IODOPFORM--	MAL, PEN.
NALIDIXIC ACID--	SDH.
OXOLINIC ACID--	NEP.
OXQUINOLINE--	ASH, MRK.
OXQUINOLINE BENZOATE--	LEM.
OXQUINOLINE CITRATE--	ASH, MRK.
OXQUINOLINE SULFATE--	ASH, LEM, MRK.
OXQUINOLINE ZINC--	MRK.
POVIDONE-- IODINE COMPLEX--	GAF.
RESORCINOL--	RPT.
THYMOL--	GIV.
TRIMETHOPRIM--	MAL.
TRIMETHOPRIM--	BUR.
AUTONOMIC DRUGS:	
SYMPATHOMIMETIC AGENTS:	
CINNAMEDRINE HYDROCHLORIDE--	SDM.
CYCLOPENTAMINE HYDROCHLORIDE	LIL.
EHEDRINE--	UPJ.
ISOPROTERENOL HYDROCHLORIDE--	SDM.
LEVARTERENOL BITARTRATE--	SDM.
MEPENTERMINE--	ARA.
METARAMINOL BITARTRATE--	MRK.
METHOXYPHENAMINE HYDROCHLORIDE	MIS.
NAPHAZOLINE HYDROCHLORIDE--	CGY.
NORDEPRIN HYDROCHLORIDE--	SDM.
NYLIDRIN HYDROCHLORIDE--	BKL.
PHENYLEPHRINE--	SDM.

TABLE 2.--MEDICINAL CHEMICALS FOR WHICH U.S. PRODUCTION AND/OR SALES WERE EITHER REPORTED OR ESTIMATED, IDENTIFIED BY MANUFACTURER, 1976--CONTINUED

MEDICINAL CHEMICALS	MANUFACTURERS' IDENTIFICATION CODES (ACCORDING TO LIST IN TABLE 3)
@AUTONOMIC DRUGS--CONTINUED	
@SYMPATHOMIMETIC AGENTS--CONTINUED	
@PHENYLEPHRINE HYDROCHLORIDE	GAN, SDW.
@PHENYLPROPANOLAMINE HYDROCHLORIDE	ARS, GAN, NEP, ORT, X.
PROXYLHEDRINE	SK.
PSEUDOEPHEDRINE HYDROCHLORIDE	BUR, GAN, SDW, UBJ.
PSEUDOEPHEDRINE SULFATE	GAN.
TETRAHYDROZOLINE HYDROCHLORIDE	PPZ.
@OTHER AUTONOMIC DRUGS:	
@ANGIOTIC BLOCKING AGENTS:	
TETRAETHYLAMMONIUM CHLORIDE	RSA.
@PARASYMPATHOLYTIC QUATERNARY AMMONIUM COMPOUNDS (EXCEPT TROPANE DERIVATIVES):	
CARBIDOPA	MRK.
DIPHEMANIL METHYL SULFATE	SCH.
HEXOXYCILIUM BETHIS SULFATE	ABB.
ISOPROFANIDE IODIDE	SK.
MEFENZOLATE BROMIDE	LKL.
THIDIXETHYL IODIDE	ACY.
@PARASYMPATHOLYTIC TERTIARY AMINES (EXCEPT TROPANE DERIVATIVES):	
ADIPHELINE HYDROCHLORIDE	CGY.
CYCRIMINE HYDROCHLORIDE	LIL.
DICLOMINE HYDROCHLORIDE	BKC.
ORPHEMARIN CITRATE	PD, RIK.
OXYPERCYCLINE HYDROCHLORIDE	PPZ.
PIPERIDOLATE HYDROCHLORIDE	LKL.
TETHEXYPHENIDYL HYDROCHLORIDE	ACY, SDW.
@PARASYMPATHOLYTIC TROPANE DERIVATIVES:	
AMISOTIOPINE METHYLBROMIDE	ARA.
BENZTROPINE MESYLATE	ARA.
HOMATROPINE HYDROBROMIDE	ARA.
HOMATROPINE METHYLBROMIDE	ARA.
@PARASYMPATHOMIMETIC AGENTS:	
PYRIDOSTIGMINE BROMIDE	HOP.
URECHOLINE CHLORIDE	MRK.
@SYMPATHOLYTIC AGENTS:	
ERGONINE MALEATE	LIL.

TABLE 2.--MEDICINAL CHEMICALS FOR WHICH U.S. PRODUCTION AND/OR SALES WERE EITHER REPORTED OR ESTIMATED, IDENTIFIED BY MANUFACTURER, 1976--CONTINUED

MEDICINAL CHEMICALS	MANUFACTURERS' IDENTIFICATION CODES (ACCORDING TO LIST IN TABLE 3)
①CENTRAL DEPRESSANTS AND STIMULANTS--CONTINUED	
②ANALGESICS, ANTIPIRETTICS, AND NONHORMONAL ANTI-INFLAMMATORY AGENTS--CONTINUED	
SALICYLIC ACID DERIVATIVES--CONTINUED	
POTASSIUM SALICYLATE	HN.
SALICYLAMIDE	PN.
SALICYLIC ACID	PD.
SODIUM SALICYLATE	HN.
③OTHER ANALGESICS AND ANTIPIRETTICS: ²	
ACTAMINOPHEN	ARA, ATP, HAL, MLS, NEP, NOR, PEN, SDH.
AMINOZEOIC ACID	ARA, SAN.
AUROTHIOGLUCOSE	SCH.
CALCIUM SUCCINATE	LEM.
ETHOHEPTAZINE CITRATE	WYT.
GOLD SODIUM THIOALATE	MRK.
IBUPROFEN	CWN, DPJ.
INDOMETHACIN	MRK.
MECLOFENAMIC ACID, SODIUM SALT	PD.
MEFENAMIC ACID	PD.
@MEPERIDINE HYDROCHLORIDE	PN, SDW, WYT.
@METHADONE HYDROCHLORIDE	LIL, HAL, PEN.
MORPHINE	MRK, X.
NAPROXEN	ARA.
OXYCODONE HYDROCHLORIDE	EN.
OXYCODONE TEREPHTHALATE	EN.
OXYPHENBUTAZONE	CGY(E).
PHENACETIN	MON.
PHENYLBUTAZONE	CGY(E).
POTASSIUM AMINOBEZOATE	GAN.
PROPXYPHENE HYDROCHLORIDE	LIL.
PROPOXYPHENE NAPSYLATE	LIL.
SODIUM AMINOBEZOATE	GAN.
③ANTICONVULSANTS, HYPNOTICS, AND SEDATIVES:	
ANTICONVULSANTS (EXCEPT BARBITURATES):	
DIPHENYLDANTOIN	PD.
DIPHENYLDANTOIN, SODIUM	PD.
ETHOSUXIMIDE	PD.
ETHOTOIN	ABB.
METHSUXIMIDE	PD.
PHENACEMIDE	ABB.

SEE FOOTNOTES AT END OF TABLE.

TABLE 2.--MEDICINAL CHEMICALS FOR WHICH U.S. PRODUCTION AND/OR SALES WERE EITHER REPORTED OR ESTIMATED, IDENTIFIED BY MANUFACTURER, 1976--CONTINUED

METHYRONE AND ITS HYDROXY ANALOGUE:

 METHYRONE, HYDROXY ANALOGUE, CALCIUM SALT - - - - - DUP, MON.

SALICYLIC ACID:

 SALICYLIC ACID - - - - - DOH, HN.

SMOOTH MUSCLE RELAXANTS:

 ALVERINE - - - - - ARA.

 ALVERINE CITRATE - - - - - ARA.

 ALVERINE HYDROCHLORIDE - - - - - ARA.

 FLAVOXATE HYDROCHLORIDE - - - - - SK.

 PARAVERINE HYDROCHLORIDE - - - - - LIL.

UNCLASSIFIED MEDICINAL CHEMICALS:

 ALLOPURINOL - - - - - BUR.

 ETHOXZOLAMIDE (CARBONIC ANHYDRASE INHIBITOR) - - - - - ARA.

¹ INCLUDE ANTI-FUNGAL AND ANTI-TUBERCULAR ANTIBIOTICS.

² INCLUDE SALES OF ASPIRIN, AND PRODUCTION AND SALES OF SALICYLIC ACID DERIVATIVES (OTHER THAN ASPIRIN).

³ INCLUDE SALES OF ANTI-DEPRESSANTS AND TRANQUILIZERS.

TABLE 3.--MEDICINAL CHEMICALS: DIRECTORY OF MANUFACTURERS, 1976

ALPHABETICAL DIRECTORY BY CODE

[Names of manufacturers that reported production or sales of medicinal chemicals to the U.S. International Trade Commission for 1976 are listed below in the order of their identification codes as used in table 2]

Code	Name of company	Code	Name of company
ABB	Abbott Laboratories	LEM	Lemp Chemicals, Inc.
ACY	American Cyanamid Co.	LIL	Eli Lilly & Co. and Puerto Rico
ADC	Anderson Development Co.	LKL	Richardson-Merrell, Inc., Merrell-National Laboratories Div.
ALD	Aldrich Chemical Co.	MAL	Mallinckrodt Chemical Works

FLAVOR AND PERFUME MATERIALS

Anne Klein

Flavor and perfume materials are organic chemicals used to impart flavors and odors to foods, beverages, cosmetics, and soaps. These aromatic chemicals are also utilized to neutralize or mask unpleasant odors in industrial processes and products as well as in consumer products.

Total domestic production of flavor and perfume materials in 1976 amounted to 128.8 million pounds (table 1). Sales of these materials in 1976 amounted to 110.9 million pounds, valued at \$195.3 million, compared with 82.7 million pounds, valued at \$143.4 million, in 1975. These totals do not include benzyl alcohol, which, before 1973, was included in flavor and perfume materials but is now shown in the miscellaneous cyclic section of this series. U.S. production of flavor and perfume materials in 1976 increased 27.1 percent from the level in 1975 and the quantity of sales increased by 25.5 percent.

Production of cyclic flavor and perfume materials in 1976 amounted to 55.1 million pounds; sales amounted to 48.5 million pounds, valued at \$125.5 million. Individual publishable chemicals in the cyclic group produced in the greatest volume in 1976 were terpineols, anethole, benzyl acetate, and benzyl salicylate.

U.S. output of acyclic flavor and perfume materials in 1976 amounted to 73.8 million pounds; sales of these materials amounted to 62.4 million pounds, valued at \$69.8 million. Monosodium glutamate was by far the most important of the acyclic chemicals in 1976, although the data are not publishable. Other important acyclic compounds included linalyl alcohol, geraniol, citronellol and hydroxycitronellal.

Flavor and Perfume Materials

U.S. production, sales, and consumption

Production in the United States of flavor and perfume chemicals in 1976 amounted to 128.8 million pounds, 27.1 percent higher than the 1975 level but not high enough to completely recoup the 1974-to-1975 decline. Sales by domestic producers increased to 110.9 million pounds in 1976 and thus recovered by more than the 1974-to-1975 decline. The value of sales in 1976 reached \$195.3 million.

The benzenoid, other cyclic, and acyclic breakdown of the flavor and aroma chemicals section accommodates tariff classification requirements rather than industry practice. In 1976, acyclic compounds constituted 57 percent of total output, benzenoid cyclic, 31 percent, and other cyclic, 12 percent. Ranked in order of value of sales, the top-ranking single chemicals were monosodium glutamate (MSG), vanillin, saccharin, anethole, coumarin, methyl salicylate, geranial, linalyl alcohol, geraniol, and hydroxycitronella, whose aggregate value of sales amounted to \$98.8 million, or 53 percent of the total. The top-ranking single chemicals were monosodium glutamate (sales value not publishable), anethole (\$8.1 million), linalyl alcohol (\$5.1 million), geraniol (\$4.9 million), and hydroxycitronellal (\$4.3 million). MSG was the leader in both 1975 and 1976. The value of sales of MSG as well as those of all other top-ranking chemicals increased in 1976 over their 1975 levels.

U.S. apparent consumption of flavor and aroma chemicals as a whole rose by about 19 percent during 1970-76, to a 1976 level of 110 million pounds, valued at \$226 million. This rise, however, was interrupted by depressed levels in 1971 and in 1975. MSG consumption in 1976 accounted for a significant share of the total consumption of all flavor and perfume chemicals rose by 32 percent. The following factors suggest that this rise in demand will continue and perhaps accelerate:

(1) There is believed to be increasing public acceptance of substitution of flavor and perfume chemicals for natural oils which are subject to high prices and/or supply problems.

(2) Aroma chemicals are raw materials in products whose sales are expected to grow at accelerating rates. Retail sales of cosmetics and toiletries, according to industry statistics and estimates, grew from \$4.7 billion to \$7.6 billion between 1970 and 1977 at an annual rate of increase ranging between 5.4 percent and 8.2 percent (the latter in 1977). The industry expects that growth in sales of perfumes, colognes, aftershave, and other fragrance products will be at the rate of 10 percent a year until 1980; sales of cosmetics designed for blacks will grow by 20 percent

annually; and sales of men's fragrances, aftershave lotions, and colognes will increase 10 percent annually. The value of industry shipments of aftershave preparations grew by 62 percent between 1967 and 1972, from \$93 million to \$150.4 million. The value of industry shipments of all toilet preparations rose steadily from \$2.8 billion in 1967 to \$5 billion in 1975. It is estimated that shipments of toilet preparations will reach \$6.2 billion in 1977.

(3) U.S. disposable personal incomes increased by 81.6 percent during the 1970-77 period. Median incomes of all families and of black families grew by 40 percent and 35 percent, respectively, between 1970 and 1975, according to Commerce Department statistics. From 1974 to 1975, median family incomes increased for all families by 6.3 percent and for black families (a recent growing market for cosmetics) by 9.6 percent. This pattern will probably continue through the 1977-80 period. Increased disposable income tends to increase consumption of luxury products such as prepared foods, cosmetics, and toilet preparations--end-use products in which flavor and aroma chemicals are raw materials.

The industry

Although the flavor and aroma chemical industry still largely consists of privately owned companies, it is traditionally international in orientation, and will probably continue to be so, particularly the aroma chemical segment. Of all companies reporting sales of flavor and perfume chemicals to the International Trade Commission for 1976, those companies having affiliates in one to four foreign countries accounted for about 29 percent of total sales value and were represented among the top nine companies ranked by sales values. For aroma chemicals alone, aggregate sales value of companies having foreign affiliates accounted for 36 percent of the total. The foreign affiliates are located in the United Kingdom, France, Switzerland, the Netherlands, Italy, Mexico, and Brazil. During 1976, ninth-ranking Universal Oil Products Fragrances division of UOP, Inc., became a part of Naarden International N.V. of the Netherlands.

The concentration profile of producers of flavor and perfume chemicals has changed, but not dramatically, during the 1970's. In 1971, 4 companies together accounted for 42 percent of total sales value and 19 companies for 72 percent of this total. In 1976, 4 companies together accounted for 49 percent, but only 9 companies accounted for almost 75 percent of total sales value.

In discussing the products and sales of this industry, it must be noted that important products not included here are flavor and perfume oil blends, and synthetic essential oils (worth probably over \$100 million). For reporting companies, the mean total sales of included flavor and aroma chemicals for 1976 was \$4.4 million, the median, \$1.8 million. The number of companies which reported production and/or sales

of flavor and perfume chemicals trended downward slightly during 1970-76, from 50 in 1970 to 47 in 1976, having fluctuated in the interim. The increasing use by this industry of sophisticated technology and instrumentation in research and development and production will probably continue to slow entry of smaller scale producers.

Continuation is foreseen in the use of crude sulfate turpentine, a byproduct of kraft paper mills, as a raw material in the production of about half, in terms of sales value, of all flavor and aroma chemicals. Petroleum-based raw materials (e.g., acetylene) are used in the production of the remainder.

Regulation

The flavor and perfume chemicals considered here are widely used in food products or in cosmetics and toiletries. The scope and extent of regulation of these chemicals varies, more when used in foods than in cosmetics, the latter probably being the least regulated of all consumer products. Consumer advocate groups have, however, in recent years catalyzed the trend toward increasing controls and regulation for cosmetics ingredients. Managerial, technical, and legal personnel in the industry are thus focusing increasingly on problems of compliance with Government directives deriving from authority under the Food, Drug, and Cosmetic Act.

In 1970 the Food and Drug Administration (FDA) removed the flavor enhancer monosodium glutamate from baby foods but not from its Generally Regarded As Safe (GRAS) list. Consumption of MSG, which was the largest volume chemical produced and sold in 1976 of any in the flavor and perfume materials group, has, nonetheless, grown during the period 1970-76, and is estimated to reach 56 million pounds for 1977. The sweeteners cyclamates and saccharin fared less well. The FDA, under the Delaney clause, a 1958 amendment to the Food, Drug, and Cosmetic Act which bans food additives found carcinogenic for man or animals, banned cyclamates for use in the United States in 1969 and this past March issued a proposal, albeit postponed, to ban saccharin. Debate on the Delaney clause is current, stimulated largely by the diet food industry, which says that 50 million people in the United States demand its products to control overweight, itself a health hazard. There remain ongoing searches by industry and universities for alternative artificial sweeteners.

Regulations governing perfume and cosmetic ingredients are relatively new. FDA regulations begun in 1976 affecting aroma chemicals as raw materials are involved in the following two labeling requirements for cosmetic products: (1) the listing of ingredients in descending order of prominence, effective for all labels ordered after May 31, 1976, and for all products filled and shipped after November 30, 1976; and (2) the

obligation of the producer to substantiate the safety of the product inherent in the requirement to designate ingredients on the label whose safety has not been substantiated.

Several years ago the cosmetics industry initiated self-regulation, still ongoing, by asking its member producers, on a voluntary basis, to supply to FDA (1) a register of all manufacturing plants, (2) formula information, and (3) semiannual product experience reports including reported injuries from cosmetic use. During 1976, industry increased self-regulation by sponsoring and financing research panels to carry out a review of the safety of some 2,700 cosmetic and fragrance ingredients. In view of the cosmetic industry's initiatives in these areas, Government regulation will probably not be a retarding factor in research, development, and shipments of perfume and cosmetic ingredients during 1977-80. The labeling requirements for cosmetic products may, however, impede the growth of imports of the ingredients.

International trade

The level of imports of all flavor and aroma chemicals in 1976 reached 28 million pounds, valued at \$86 million--35 percent in terms of quantity and 25 percent in terms of value over the 1975 levels. Imports of monosodium glutamate, principally from Korea and Japan, alone amounted to 13.5 million pounds or 48 percent of the total quantity, but their value of \$7.2 million constituted only 8 percent of total value. Other important sources of imports were France, Switzerland, and Canada. Important items imported in 1976 other than MSG were saccharin, vanillin, ethyl vanillin, and various artificial musks.

Exports fluctuated during 1970-76, but rose (46 percent) in 1976 in terms of quantity and 25 percent in terms of value from 1975 levels. France and Spain were the principal markets for U.S. exports in 1976, which amounted to 25.3 million pounds valued at \$45.6 million.

Imports exceeded exports during 1970-76 except for the period 1971-73. This unfavorable balance of trade in flavor and perfume chemicals broadened in 1976. The ratio of exports to imports was 93.6 percent in 1970 and 98.2 percent in 1974, then it dropped to 95.9 percent in 1975 and to 90.9 percent in 1976. For monosodium glutamate, imports consistently exceeded exports by a large margin during the 1970's. The ratio of exports to imports was 54.6 percent in 1970 but it declined to 30.2 percent in 1976. The multinational orientation of the principal producers of perfume or aroma chemicals will likely lead to a continuation of this unfavorable balance of trade, or trade deficit, during the 1977-80 period.

Monosodium glutamate produced in the United States became less competitive with imports, particularly those from Korea in 1976. The unit values of producers' sales of MSG in 1975 and 1976 were 69 cents and 65 cents per pound, respectively, while those of imports were 59 cents and 53 cents per pound, respectively. Imports, even with duty added, have a price advantage.

Brazil, the principal U.S. export market for monosodium glutamate, is the site of a new MSG-producing plant which was constructed by a major Japanese producer and became operational in late 1976. U.S. exports of MSG will likely diminish during the 1977-80 period.

TABLE 3.--FLAVOR AND PERFUME MATERIALS: DIRECTORY OF MANUFACTURERS, 1976

ALPHABETICAL DIRECTORY BY CODE

[Names of manufacturers that reported production or sales of flavor and perfume materials to the U.S. International Trade Commission for 1976 are listed below in the order of their identification codes as used in table 2]

Code	Name of Company	Code	Name of Company
ABB	Abbott Laboratories	NCI	Union Camp Corp.
AIP	Air Products & Chemicals, Inc.	NFO	Norda Inc.
AMB	American Bio-Synthetics Corp.	NTL	NL Industries, Inc.
ARS	Arsynco, Inc.	NW	Northwestern Chemical Co.
ARZ	Arizona Chemical Co.	OPC	Orbis Products Corp.
BJL	Burdick & Jackson Labs., Inc.	OTC	Story Chemical Corp.
CI	Chem-Fleur, Inc.	PD	Parke, Davis & Co. Sub of Warner-Lambert Co.
CWN	Upjohn Co., Fine Chemical Div.	PEN	CPC International, Inc., Penick Div.
DOW	Dow Chemical Co.	PFW	Polak's Frutal Works, Inc.
ELN	Elan Chemical Co.	PFZ	Pfizer, Inc.
FB	Fritzsche, Dodge & Olcott, Inc.	RDA	Rhodia, Inc.
FEL	Felton International, Inc.	RSA	R.S.A. Corp.
FLO	Florasynth, Inc.	RT	Ritter International
FMT	Fairmount Chemical Co., Inc.	SDH	Sterling Drug, Inc., Hilton-Davis Chemical Co. Div.
GAF	GAF Corp., Chemical Div.	Stauf	Stauffer Chemical Co.:
GIV	Givaudan Corp.	SFF	Food Ingredients Div.
GLD	SCM Corp., Glidden-Durkee Div.	SFS	Specialty Div.
GRW	Great Western Sugar Co.	SKG	Sunkist Growers, Inc.
HN	Tenneco Chemicals, Inc.	SLV	Sterwin Chemicals, Inc.
HOF	Hoffmann-LaRoche, Inc.	STP	Stepan Chemical Co.
HPC	Hercules, Inc.	SW	Sherwin-Williams Co.
IFF	International Flavors & Fragrances, Inc.	UCC	Union Carbide Corp.
IMC	IMC Chemical Group, Inc.	UNG	Ungerer & Co.
MON	Monsanto Co.	UOP	UOP, Inc., UOP Chemical Div.
		VEL	Velsicol Chemical Corp.

Note.--Complete names and addresses of the above reporting companies are listed in table 1 of the appendix.

PLASTICS AND RESIN MATERIALS

Anne Klein

Plastics and resin materials are high molecular weight polymers which, at some stage in their manufacture, exist in such physical condition that they can be shaped or otherwise processed by the application of heat and pressure. Depending on the chemical composition, manufacturing process or intended use, the commercial products may contain plasticizers, fillers, extenders, stabilizers, coloring agents, or other additives. Plastics materials may be molded, cast, or extruded into semi-finished or finished solid forms. Resin materials may be in the form of solutions, pastes, or emulsions for applications such as protective coatings, adhesives, or paper and textile treatment.

Statistics on U.S. production and sales of synthetic plastics and resin materials for 1976 are given in table 1. U.S. production of plastics and resin materials in 1976 totaled 29,680 million pounds, or 21 percent more than the 24,509 million pounds produced in 1975. Sales in 1976 totaled 24,837 million pounds, valued at \$8,619 million compared with 20,955 million pounds, valued at \$7,003 million in 1975.

Thermosetting materials are those which harden with a change in composition in the final treatment so that they cannot again be softened by heat or solvents. U.S. production of thermosetting materials totaled 5,970 million pounds in 1976 compared with 5,140 million pounds in 1975. Production of the most important products in 1976 included polyether and polyester polyols for urethanes (1,346 million pounds), phenolic resins (1,305 million pounds), amino (or urea and melamine) resins (1,230 million pounds), polyester resins, (unsaturated) (865 million pounds) and alkyd resins (705 million pounds).

Thermoplastic materials are those which can be repeatedly softened by heat and shaped. U.S. production of thermoplastic materials totaled 23,710 million pounds in 1976 compared with 19,728 million pounds in 1975. Production of the most important products in 1976 included polyethylene (8,775 million pounds), vinyl resins (5,553 million pounds), and styrene type materials (4,743 million pounds).

TABLE 1.--PLASTICS AND RESIN MATERIALS: U.S. PRODUCTION AND SALES, 1976

Quantities and values are given in terms of the total weight of the materials (dry basis). Listed below are all plastics and resin materials, urethane type elastomers, and certain precursors for which any reported data on production or sales may be published. (Leaders (...) are used where the reported data are accepted in confidence and may not be published and/or where no data were reported.) Table 2 lists all products for which data on production and/or sales were reported and identifies the manufacturers of each]

MATERIAL	PRODUCTION	SALES		
		QUANTITY	VALUE	UNIT VALUE ¹
	1,000 pounds dry basis ²	1,000 pounds dry basis ²	1,000 dollars	Per pound
Grand total-----	29,680,253	24,836,847	8,619,353	\$0.35
Plastics and resin materials, benzenoid ³ -----	8,943,083	7,684,865	3,113,430	.41
Plastics and resin materials, nonbenzenoid-----	20,737,170	17,151,982	5,505,923	.32
THERMOSETTING RESINS				
Total-----	5,969,844	4,680,620	1,878,462	.40
Alkyd resins, total ⁴ -----	704,647	470,715	201,637	.43
Phthalic anhydride type-----	626,575	433,249	181,707	.42
Polybasic acid type-----	40,696	23,681	13,519	.57
Styrenated-alkyds or copolymer alkyds-----	34,502	12,108	5,876	.49
Other copolymer alkyds-----	2,874	1,677	1,035	.62
Dicyandiamide resins-----	1,950	1,815	1,699	.94
Epoxy resins: ^{5,6}				
Unmodified-----	202,576	187,391	135,413	.72
Advanced-----	57,669	50,182	49,025	.98
Furfuryl type resins-----	7,510
Melamine-formaldehyde resins(an amino resin)-----	188,374	146,923	79,681	.58
Phenolic and other tar acid resins-----	1,305,294	999,930	382,986	.34
Polyester resins, unsaturated ⁷ -----	865,198	707,443	303,927	.43
Polyether and polyester polyols for urethanes ⁸ -----	1,346,337	988,729	344,282	.34
Polyurethane elastomer and plastic products, total--	207,524	170,023	159,722	.94
Elastomers ⁹ -----	81,182	65,404	84,307	1.29
Plastics ¹⁰ -----	126,342	104,619	75,415	.72
Silicone resins-----	15,223	13,084	31,348	2.40
Urea-formaldehyde resins (an amino resin)-----	1,041,360	920,866	168,453	.18
Other thermosetting resins-----	26,182	23,519	20,289	.86
THERMOPLASTIC RESINS				
Total-----	23,710,409	20,156,227	6,740,891	.33
Acrylic resins ^{11,12} -----	888,469
Engineering plastics ¹³ -----	92,723	98,879	96,800	.98
Petroleum hydrocarbon resins-----	306,143	293,480	69,649	.24
Polyamide resins, nylon type ^{11,14} -----	124,313	77,131	86,303	1.12
Polyamide resins, non-nylon type-----	30,967	27,951	31,413	1.12
Polyester resins, saturated ^{11,15} -----	107,910	62,663	68,021	1.09
Polyethylene resins, total-----	8,774,658	7,583,224	2,193,686	.29
Density 0.940 and below-----	5,661,328	4,720,630	1,385,531	.29
Density over 0.940-----	3,113,330	2,862,594	808,155	.28
Polyimides and amide-imide polymers-----	2,153
Polypropylene resins-----	2,550,950	2,063,442	582,339	.28
Polyterpene resins-----	13,055	12,778	5,850	.46
Polytetrafluoroethylene (PTFE)-----	15,567	13,015	45,453	3.49
Rosin esters, unmodified (ester gums)-----	20,950	22,248	9,161	.41
Rosin esters, modified-----	43,421	41,254	17,799	.43
Styrene plastics materials, total-----	4,742,895	4,390,297	1,530,761	.35
Acrylonitrile-butadiene-styrene (ABS) resins-----	1,003,074	938,861	540,878	.46
Straight polystyrene-----	2,207,887	1,988,801	582,399	.29
Rubber modified polystyrene-----	778,208	773,426	218,764	.28
Other styrene copolymers-----	251,053	221,019	131,136	.59
Styrene-butadiene latexes-----	303,205	298,751	103,589	.35
All other styrene latexes-----	29,851	24,387	9,551	.39
All other styrene type plastics materials-----	169,617	145,052	54,444	.37

PLASTICS AND RESINS MATERIALS

TABLE 1.--PLASTICS AND RESIN MATERIALS: U.S. PRODUCTION AND SALES, 1976--CONTINUED

PLASTICS AND RESIN MATERIALS	PRODUCTION	SALES		
		QUANTITY	VALUE	UNIT VALUE ¹
	1,000	1,000	1,000	
	pounds	pounds	dollars	Per
	dry basis ²	dry basis ²		pound
THERMOPLASTIC RESINS--Continued				
Vinyl resins, total ¹⁶ -----	5,553,205	4,427,173	1,343,119	\$0.30
Polyvinyl chloride and copolymers-----	4,544,811	3,579,067	925,609	\$0.26
Polyvinyl acetate ¹⁷ -----	617,152	548,276	216,743	.40
Polyvinyl alcohol ¹⁸ -----	126,465	105,628	67,091	.65
Polyvinyl butyral resins-----	...	42,913	64,336	1.50
Polyvinylidene chloride latex resins-----	16,640	16,053	9,483	.59
Other vinyl and vinylidene resins-----	248,137	135,236	59,857	.44
All other thermoplastic resins ¹⁹ -----	443,030	1,042,692	660,537	.63

¹ Calculated from rounded figures.

² Dry weight basis unless otherwise specified. Dry weight basis is the total weight of the materials including resin and coloring agents, extenders, fillers, plasticizers, and other additives, but excluding water and other liquid diluents unless they are an integral part of the materials.

³ Includes benzenoid plastics and resin materials as defined in part 1 of schedule 4 of the Tariff Schedules of the United States; also includes urethane type elastomers which are not defined in part 1 of schedule 4 of the TSUS.

⁴ The total now includes data for styrene alkyd polyesters.

⁵ Includes reactive diluents which are an integral part of the resin. Excludes the weight of hardeners sold in association with the resin as part of a two-component system.

⁶ Data shown for advanced epoxy resins are that part of the unmodified epoxy resins which is further processed.

⁷ Polyester resins are unsaturated alkyd resins, later to be copolymerized with a monomer (such as styrene or methyl methacrylate), and polyallyl resins (such as diallyl phthalate and diglycol carbonate). Data are on an "as sold" basis, including monomer if part of the resin system.

⁸ In addition to the polyols, the other principal starting materials used in the production of urethane products are the isocyanic acid derivatives, mainly the 80/20 mixture of toluene-2,4- and 2,6-diisocyanate. Statistics for the isocyanic acid derivatives are reported in the cyclic intermediates section of the Synthetic Organic Chemicals report.

⁹ Data for urethane type elastomers are now included in this section of the Synthetic Organic Chemicals report; these statistics previously were reported under the elastomers (synthetic rubber) section. The data on urethane elastomers are believed to be not fully representative of the total urethane market in view of the very large number of urethane elastomer producers.

¹⁰ The term plastic encompasses compounds containing additives such as plasticizers (Whittington's Dictionary of Plastics, First Edition, published by Technomic Publishing Co., Inc.).

¹¹ Does not include production or sales for fiber use.

¹² Includes data for acrylic resins reported to the U.S. International Trade Commission as thermosetting resins.

¹³ Engineering plastics: Includes acetal, polycarbonate, polyimide (sales only; production separately shown), polysulfone, and polyphenylene oxide. Engineering plastics are defined in Whittington's Dictionary of Plastics, as "Those [plastics] which have mechanical, chemical and thermal properties suitable for use in construction, machine components and chemical processing equipment". The above list of plastics (all of which are thermoplastic) was selected from a larger group in this source. The other plastics named in Whittington's Dictionary as engineering plastics, ABS resins and nylon resins, are not included in the above list as they are published separately.

¹⁴ Statistics for nylon 6 and nylon 6/6 which are used in plastic applications (e.g., molding etc.) are included here.

¹⁵ Statistics for polyethylene terephthalate which is used in plastics applications (e.g., molding, etc.) are included here.

¹⁶ Data are on the basis of dry resin content, excluding the weight of plasticizers, extenders, fillers, coloring agents, stabilizers, or impact modifiers, unless otherwise noted.

¹⁷ Data for polyvinyl acetate produced and sold in latex form includes the weight of any protective colloids which are used as emulsion stabilizers and form an integral part of the resin system. Production and sales do not include polyvinyl acetate used as a reactive intermediate for polyvinyl alcohol or other vinyl resins.

¹⁸ Production and sales do not include polyvinyl alcohol used as a reactive intermediate for polyvinyl butyral or other vinyl resins.

¹⁹ Includes acrylic resins (sales only), cellulose plastics and resins, coumarone-indene resins, polybutylene type resins, fluorocarbon resins except PTFE, and other thermoplastic materials.

Note.--Data reported to the U.S. International Trade Commission do not necessarily coincide with that reported to the Society of the Plastics Industry (SPI) because of differences in both the reporting instructions and in the coverage of certain resins.

TABLE 2.--PLASTICS AND RESIN MATERIALS FOR WHICH U.S. PRODUCTION AND/OR SALES WERE EITHER REPORTED OR ESTIMATED, IDENTIFIED BY MANUFACTURER, 1976

MATERIAL	MANUFACTURERS' IDENTIFICATION CODES (ACCORDING TO LIST IN TABLE 3)
THERMOSETTING RESINS	
THERMOSETTING RESINS:

TABLE 3.--PLASTICS AND RESIN MATERIALS: DIRECTORY OF MANUFACTURERS, 1976

ALPHABETICAL DIRECTORY BY CODE

[Names of manufacturers that reported production or sales of plastics and resin materials to the U.S. International Trade Commission for 1976 are listed below in the order of their identification codes as used in table 2]

Code	Name of company	Code	Name of company
ABS	Abex Corp., Friction Products Group	DSO	DeSoto, Inc.
ACC	Amoco Chemical Corp.	DUP	E.I. duPont de Nemours & Co., Inc.
ACR	CPC International, Inc., Acme Resin Co. Div.	ECC	Eastern Color & Chemical Co.
ACS	Allied Chemical Corp., Specialty Chemical Div.	EFH	E.F. Houghton & Co.
ACY	American Cyanamid Co.		Eastman Kodak Co.:
AEP	A & E Plastics Pak Co., Inc.	EKT	Tennessee Eastman Co. Div.
AIP	Air Products & Chemicals, Inc.	EXX	Texas Eastman Co. Div.
ALF	Allied Chemical Corp., Fibers Div.	EMR	Emery Industries, Inc.
AME	Stauffer Chemical Co.	EMI	Exxon Chemical Co. U.S.A.
AMR	Pacific Resins & Chemical Co.	EPI	Egel Pitcher Industries, Inc., Ohio Rubber Co.
APT	Whittaker Corp., Whittaker Coatings & Chemical, Mol Res Resins	EW	Westinghouse Electric Corp., Industrial Plastics Div., Chemical Products Plant
APX	Apex Chemical Co., Inc.		
ARK	Armstrong Cork Co.		
ASH	Ashland Oil, Inc., Ashland Chemical Co. Div.	FAR	Syncon, Inc., Farnow Div.
ASY	American Synthetic Rubber Corp.	FCD	Synres Chemical Corp.
ATR	Atlantic Richfield Co.	FG	Foster Grant Co., Inc.
AZS	AZS Corp., AZ Products Co. Div.	FIR	Firestone Tire & Rubber Co., Firestone Plastics Co. Div.
		FLH	H.B. Fuller Co.
BAL	Baltimore Paint & Chemical Corp.	FLN	Franklin Chemical Corp.
BAS	BASF Wyandotte Corp.	FLW	Fuller-O'Brien Corp.
BCM	Belding Chemical Industries	FMP	FMC Corp., Industrial Chemical Div.
BEN	Bennett's	FMS	First Mississippi Corp.
BFG	B.F. Goodrich Co., B.F. Goodrich Chemical Co. Div.	FOC	Handschy Chemical Co., Parac Oil & Chemical Co. Div.
BLS	Life Savers, Inc.	FOM	Formica Corp.
BME	Bendix Corp., FMD Div.	FRE	Freeman Chemical Corp.
BOR	Borden Co., Borden Chemical Co. Div.	FRF	Firestone Tire & Rubber Co., Firestone Synthetic Fibers Co.
BRU	M.A. Bruder & Sons, Inc.	FRP	FRP Company
		FRS	Firestone Tire & Rubber Co., Firestone Synthetic Rubber & Latex Co. Div.
CBD	Chembond Corp.	GAF	GAF Corp., and Chemical Div.
CBM	Carborundum Co.	GE	General Electric Co.:
CBN	Cities Service Co., Petrochemicals Div.	GEI	Insulating Materials Products Sec.
CBY	Crosby Chemicals, Inc.	GIL	Gilman Paint & Varnish Co.
CEL	Celanese Corp.:	GLC	General Latex & Chemical Corp.
	Celanese Plastics Co.	GLD	SCM Corp., Coatings and Resins Div.
	Celanese Polymer Specialties Co.	GNM	General Mills Chemicals, Inc.
CGL	Cargill, Inc.	GNT	General Tire & Rubber Co., Chemical Plastics Div.
CGY	Ciba-Geigy Corp., Resins Dept.	GOC	Gulf Oil Corp., Gulf Oil Chemicals Co.-U.S.
CHC	Choate Chemical Co.	GOR	Carl Gordon Industries, Inc.
CHP	C.H. Patrick & Co., Inc.	GP	Georgia-Pacific Corp.:
CLK	Clark Chemical Corp.		Rebecca Chemical Div. Resins Operations
CMP	Commercial Products Co., Inc.	GFM	General Plastics Manufacturing Co.
CNE	Conchemco, Inc.	GRA	Great American Chemical Corp.
CNI	Conap, Inc.	GRD	W.R. Grace & Co., Polymers Chemicals Div.
CNT	CertainTeed Corp.	GRC	P.D. George Co.
CO	Continental Oil Co.	GRV	Guardsman Chemical Coatings, Inc.
COO	The Terrell Corp.	GYR	Goodyear Tire & Rubber Co.
CPV	Cook Paint & Varnish Co.		
CPX	Chemplex Co.		
CSD	Cosden Oil & Chemical Co.	HAN	Hanna Chemical Coating Corp.
CTR	Customs Resins, Inc.	HER	Heresite & Chemical Co.
CWN	Upjohn Co., Fine Chemical Div.	HKD	Hooker Chemical Corp., Durez Div.
		HLM	U.S. Industries, Inc., E. Helman Co. Div.
DA	Diamond Shamrock Corp.		
DAN	Dan River, Inc.		
DCC	Dow Corning Corp.		
DEG	Degan Oil & Chemical Co.		
DEO	Day-Glo Color Corp.		
DNS	Dennis Chemical Co.		
DOW	Dow Chemical Co.		
DPP	Dixie Pine Products Co., Inc.

Note.--Complete names and addresses of the above reporting companies are listed in table 1 of the appendix.

RUBBER-PROCESSING CHEMICALS

David B. Beck

Rubber-processing chemicals are organic compounds that are added to natural and synthetic rubber to give them qualities necessary for their conversion into finished rubber goods. In this report, statistics are given for cyclic and acyclic compounds by use--such as accelerators, antioxidants, blowing agents, and peptizers. Data on production and sales of rubber-processing chemicals in 1976 are given in table 1¹.

Production of rubber-processing chemicals as a group in 1976 amounted to 384 million pounds, or 37.8 percent more than the 279 million pounds in 1975. Sales of rubber-processing chemicals in 1976 amounted to 224 million pounds, valued at \$247 million, compared with 204 million pounds, valued at \$207 million, in 1975.

The production of cyclic rubber-processing chemicals in 1976 amounted to 304 million pounds, or 35.1 percent more than the 225 million pounds in 1975. Sales in 1976 were 186 million pounds, valued at \$218 million, compared with 173 million pounds, valued at \$187 million, in 1975. Of the total production of cyclic rubber-processing chemicals in 1976, accelerators, activators, and vulcanizing agents accounted for 42.3 percent and antioxidants, antiozonants, and stabilizers for 52.8 percent. Production of antioxidants, antiozonants, and stabilizers, which amounted to 160.3 million pounds in 1976, included 121.2 million pounds of amino compounds and 39.1 million pounds of phenolic and phosphite compounds. Sales of amino antioxidants, antiozonants, and stabilizers in 1976 amounted to 80.1 million pounds, valued at \$94.4 million, sales of phenolic and phosphite antioxidants, antiozonants, and stabilizers, were 26.0 million pounds, valued at \$30.4 million.

Production of acyclic rubber-processing chemicals in 1976 amounted to 49.7 million pounds, or 8.0 percent less than the 54.0 million pounds reported for 1975. Sales in 1976 totaled 37.9 million pounds, valued at \$28.6 million, compared with 31.2 million pounds, valued at \$20.0 million, in 1975. Dithiocarbamic acid derivatives accounted for 15.0 percent of sales (based on quantity) of acyclic rubber-processing chemicals in 1976 and bis(dimethylthiocarbamoyl) disulfide accounted for 12.9 percent.

¹/ See also table 2 which lists these producers and identifies the manufacturers by codes. These codes are given in table 3.

RUBBER-PROCESSING CHEMICALS

TABLE 1.--RUBBER-PROCESSING CHEMICALS: U.S. PRODUCTION AND SALES, 1976

[Listed below are all rubber-processing chemicals for which any reported data on production or sales may be published. (Leaders (...) are used where the reported data are accepted in confidence and may not be published or where no data were reported.) Table 2 lists separately all rubber-processing chemicals for which data on production and/or sales were reported and identifies the manufacturers of each]

RUBBER-PROCESSING CHEMICALS	PRODUCTION	SALES		
		QUANTITY	VALUE	UNIT VALUE ¹
	1,000 pounds	1,000 pounds	1,000 dollars	Per pound
Grand total-----	384,423	224,272	246,857	\$1.10

Bis(dimethylthiocarbamoyl) disulfide-----	3,282	1,963	3,853	1.96
Bis(dimethylthiocarbamoyl) disulfide-----	5,358	4,895	3,832	.78
Shortstops: Dimethyldithiocarbamic acid, sodium salt-----	2,266	2,034	3,069	1.51
All other acyclic rubber-processing chemicals ⁶ -----	3,080
Shortstops: Dimethyldithiocarbamic acid, sodium salt-----	30,890	25,173	13,883	.55

^{1/} Calculated from rounded figures.

^{2/} Includes guanidines and other uses not separately shown.

^{3/} Includes aldehyde- and acetone-amine reaction products (production only) and N-phenyl-2-naphthylamine (sales only).

^{4/} Includes blowing agents and other uses not separately shown.

^{5/} Data on dithiocarbamates included in this table are for materials used chiefly in the processing of natural and synthetic rubber. Data on dithiocarbamates which are used chiefly as fungicides are included in the report "Pesticides and Related Products".

^{6/} Includes "other" thiurams, xanthates, sulfides, conditioning and lubricating agents, polymerization regulators, shortstops, and other uses not separately shown.

TABLE 2.--RUBBER PROCESSING CHEMICALS FOR WHICH U.S. PRODUCTION AND/OR SALES WERE EITHER REPORTED OR ESTIMATED, IDENTIFIED BY MANUFACTURER, 1976

(CHEMICALS FOR WHICH SEPARATE STATISTICS ARE GIVEN IN TABLE 1 ARE MARKED BELOW WITH A "®"; CHEMICALS NOT SO MARKED DO NOT APPEAR IN TABLE 1 BECAUSE THE REPORTED DATA ARE ACCEPTED IN CONFIDENCE AND MAY NOT BE PUBLISHED.)

MANUFACTURERS IDENTIFICATION CODES SHOWN BELOW ARE TAKEN FROM TABLE 3, AND "X" SIGNIFIES THAT THE MANUFACTURER DID NOT CONSENT TO HIS IDENTIFICATION WITH THE DESIGNATED PRODUCT. COMPANY IDENTIFICATION CODES WHICH ARE FOLLOWED BY AN "®" ARE SO LABELED BECAUSE THE COMPANY FAILED TO SUPPLY THE U. S. INTERNATIONAL TRADE COMMISSION WITH THEIR DATA IN SUPPLEMENT TIME FOR ITS INCLUSION IN THIS REPORT. THE COMPANY IS PRESUMED TO HAVE CONTINUED PRODUCTION OF THE COMPOUND IN QUESTION IN 1976 AND THE VOLUME OF PRODUCTION AND SALES HAS BEEN ESTIMATED BY THE USITC STAFF MEMBERS)

		VNC	Vanderbilt Chemical Copr.

Note.--Complete names and address of the above reporting companies are listed in table 1 of the appendix.

ELASTOMERS

David B. Beck

Elastomers (synthetic rubber) are high polymeric materials with properties similar to those of natural rubber. The term "elastomers" as used in this report, means a substance, whether in bale, crumb, powder, latex, and other crude form, which can be vulcanized or similarly processed into a material that can be stretched to at least twice its original length and, after having been so stretched and the stress removed, will return with force to approximately its original length. U.S. production and sales of elastomers in 1976 are shown in table 1¹.

Total U.S. production² of synthetic rubber in 1976 amounted to 5,386 million pounds, an increase of 18 percent from that produced in 1975. Total sales² of elastomers in 1976 amounted to 3,710 million pounds, a decrease of 6 percent from that produced in 1975.

Styrene-butadiene rubber (SBR, or S-type rubber) in 1976 continued to be the elastomer produced in the greatest quantity as it has been for more than a quarter of a century. U.S. production of S-type rubber, including 30 million pounds of its vinylpyridine sub-type, amounted to 3,010 million pounds in 1976, an increase of 14 percent from that reported for 1975. Solution polymerized butadiene rubber, a stereo type elastomer, was produced domestically in 1976 in the next largest amount--752 million pounds; production of isoprene and ethylene-propylene rubbers, the other stereo types, amounted to 164 million³ and 303 million pounds, respectively. Total U.S. production of these stereo type elastomers amounted to 1,219 million pounds in 1976--an increase of 25 percent from 1975. Other principal types of synthetic elastomers for which U.S. production data are reported separately are isobutylene-isoprene (butyl) rubber, production of which was 277 million pounds³ in 1976, acrylonitrile-butadiene (N-type) rubber, production of which was 166 million pounds, and polychloroprene (Neoprene) rubber, production of which was 383 million pounds³.

Sales of S-type rubber by U.S. producers in 1976 (including its vinylpyridine sub-type) amounted to 1,786 million pounds, a decrease of 18 percent from sales reported for 1975. Sales of solution polymerized butadiene rubber amounted to 413 million pounds, and those of ethylene-propylene rubber to 245 million pounds. Sales of N-type rubber in 1976 amounted to 130 million pounds. Sales of solution polymerized butadiene rubber in 1976 decreased from sales in 1975 by 12 percent, and sales of ethylene-propylene rubber increased 27 percent. Sales of N-type rubber in 1976 were 23 percent above those in 1975.

¹ See also Table 2 which lists these products and indicates the manufacturers of each by code. The codes are identified by company name in table 3.

² Does not include urethane type elastomers.

³ Reported by the Rubber Manufacturers' Association.

Synthetic Elastomers

During 1976 the U.S. synthetic elastomers industry was hampered by 1) the United Rubber Workers (URW) strike against the Big Four tire producers, and 2) a cancer scare which set the National Institute of Occupational Safety and Health (NIOSH) and certain producers to the task of researching potential occupational hazards germane to the rubber industry. Despite these and other developments, overall production of synthetic elastomers was up from 1975, and the outlook for 1977 and beyond is favorable.

Styrene-butadiene rubber workers and leukemia

B.F. Goodrich reported in March 1976 that three employees of its Port Neches, Texas, styrene-butadiene rubber (SBR) plant had died of leukemia since 1971. A quick check by other SBR producers revealed that several other leukemia-related deaths and illnesses had similarly occurred.

NIOSH began an investigation having the same urgency as its vinyl chloride monomer study. Pinpointing the potential carcinogen in SBR is complicated, however, by the fact that SBR production involves over 200 monomers and rubber-processing chemicals. Two university studies funded by the rubber industry to research occupational diseases have been in progress since 1970, but some producers now have initiated inquiries of their own. The International Institute of Synthetic Rubber Producers (IISRP) is also concentrating a massive factfinding effort on butadiene monomers.

United Rubber Workers strike

Contract negotiations between the URW and the Big Four tire producers broke down in 1976, as they had in 1967, 1970, and 1973. But the 1976 URW strike was to last longer (140 days) than any previous one. The key issues were a cost-of-living escalator clause and wage differentials between tire workers and other rubber-product workers.

The effects of the strike were not immediately felt because tire inventories were initially high (55 million units compared with a normal inventory of 40 to 50 million units), and stocks of the monomers butadiene and styrene were low. Production of the monomers, SBR elastomers, and rubber-processing chemicals continued at a normal pace through April to build supply in anticipation of heavy tire production once the strike was settled.

The strike was not settled as soon as most hoped. As stocks rose, throughout May and August, SBR production dropped 12 to 26 percent (see the following figure). This triggered declines in the demand for, and in the price of, styrene and butadiene monomers.

Synthetic rubber: Monthly U.S. production of total synthetic rubber and styrene-butadiene rubber (SBR), 1976

The strike curbed what could have been a very good year for tire producers. When the strike ended in August, tire inventories had dropped to 20 million units, and at yearend they were about 10 million units short of normal reserves. Sales for the year generally increased 5 to 6 percent over 1975, but after-tax profits fell almost 30 percent for some companies.

While hose and belting generally rebounded from the 1975 recession, flat belt sales (serving high capital expenditure markets such as coal mining) were dampened by the length of the strike. Producers of fibers, tire yarn, and other products related to tire manufacture also reported feeling the impact of the strike.

Production and sales

Production of synthetic elastomers in 1976 amounted to 5.3 billion pounds, up almost 15 percent from 4.6 billion pounds in 1975. The following tabulation shows that all major types of elastomers made a good recovery from 1975:

<u>Type of rubber</u>	<u>Production</u>		<u>Percentage increase</u>
	<u>1975</u> (1,000 pounds)	<u>1976</u> (1,000 pounds)	
SBR-----	2,607,907	2,980,253	14
Butyl-----	182,039	277,685	53
N-type-----	118,767	165,924	40
Polybutadiene-----	655,778	780,756 <u>1/</u>	19
Polyisoprene-----	135,154	164,115	21
EPDM-----	187,392	303,056	62
Silicone-----	31,221	38,974	25
Styrene-butadiene- vinylpyridine-----	29,500	29,832	1
Total synthetic rubber-----	4,578,725	5,220,956 <u>1/</u>	14

However, in the overall perspective, only polybutadiene and EPDM managed to exceed the 1974 levels of production.

Sales of SBR in 1976 amounted to 1,775,333 thousand pounds compared with 2,607,907 thousand pounds in 1975, or a decrease of 32 percent. Sales value of SBR declined 17 percent from \$572 million in 1975 to \$473 million in 1976. Similarly, production and sales of solution-polymerized polybutadiene declined 12 percent and 9 percent, respectively. Changes in sales quantities and values for other synthetic elastomers were as follows:

1/ Census data.

<u>Type of rubber</u>	<u>Percentage change in</u>	<u>Percentage change in</u>
	<u>sales quantity:</u>	<u>sales value:</u>
	<u>1976 from 1975</u>	<u>1976 from 1975</u>
Butyl-----	1/	1/

EPDM-----	27	39
Silicone-----	39	32
Styrene-butadiene-		
vinylpyridine-----	-35	-34

1/ Withheld to avoid disclosure of company confidential data.

Foreign trade

In synthetic elastomers, the United States maintained a favorable export/import ratio of about 2.3 in 1976 (see figure on p. 206). That ratio has varied no more than 0.3 from the average during 1972-76. However, if the quantity of natural rubber imports is included (the United States does not produce natural rubber, yet it consumes about one-fifth of the world's total, annually), the export/import ratio drops to a less favorable 0.36 for 1976 (see figure on p. 207).

The ratio of imports to consumption of synthetic rubber alone was steady at 4.7 to 5.7 percent during 1972-76. If natural rubber data are considered, the ratio of imports to consumption shows a steady (but gradual) increase from 24.8 percent in 1972 to 30.3 percent in 1976.

As the U.S. economy was depressed in 1975, so too were U.S. exports of rubber. Export problems included currency devaluations, inflation, raw materials costs, tariff barriers, and transportation costs. These factors, coupled with increased foreign competition and the prospects of little growth in U.S. tire demand, provided strong incentive for U.S. producers to expand their facilities overseas, especially in the developing countries.

World demand and foreign competition

Latin America's automobile consumption in 1980 will be more than double that in 1970. Similarly, Southeast Asia's demand for original-equipment tires will increase at least 50 percent in the same period. Both these regions, along with the Middle East and Africa, are ripe for industrial development, which means that nontire rubber demand (especially for hose and belting) will be strong in the coming decade.

U.S. multinational rubber companies face a number of problems in meeting increasing demand overseas. The biggest question is whether expansion can

Synthetic rubber: U.S. export quantity and U.S. import quantity, 1972-76

Synthetic and natural rubber: U.S. export quantity (including shipments of natural rubber from the U.S. Government stockpile) versus U.S. import quantity, 1972-76

occur fast enough to meet growing demand for U.S. rubber technology. Many countries which are potential sites for new plants or for the expansion of existing facilities are demanding a bigger share of the multinationals' gross receipts. Cheap labor is becoming a scarcity and raw materials costs are increasing. Foreign government red tape also tends to retard expansion of U.S. industry abroad. Meanwhile, Japan and Western Europe are constantly developing newer and better rubber know-how of their own and promise to be strong competition for U.S.-owned companies in foreign markets.

Natural rubber

U.S. consumption of natural rubber (NR) in 1976 was about 1.5 billion pounds, or 25 percent of total U.S. rubber consumption--second only to SBR. Tire production accounted for 65 percent of SBR consumption and 73 percent of NR consumption, and together the two accounted for 77 percent of total rubber consumption by the tire industry.

In years to come the fraction of tire rubber accounted for by NR will probably increase at the expense of SBR. There are two reasons: (1) New radial tread designs for passenger tires are already consuming up to twice the NR per tire used in older designs. Furthermore, the radial designs are being tested for nonpassenger tires as well. (2) Consumption of NR since World War II has been limited by supply, but higher yield agricultural techniques, commercial redevelopment of guayule as a source of NR, and a breakthrough in the battle against South American leaf blight (which wiped out the Brazilian rubber industry at the turn of the century) will contribute to increased future NR availability. World NR production is projected to rise from 3.5 million metric tons, or 32 percent of world rubber consumption, in 1976 to an estimated 10 to 12 million metric tons, or 35 to 40 percent of projected world consumption, by the end of the century.

A significant step was taken in August by the Association of Natural Rubber Producing Countries (ANRPC) toward stabilizing the erratic NR prices prevalent in recent years. Through an international buffer stock and strategic open market purchases, the ANRPC (which accounts for over 90 percent of world NR production) hopes to maintain NR supply in relative balance with demand and thereby make prices more stable and NR more competitive.

Industry outlook: 1977 and beyond

The biggest factor in rubber industry growth in 1977 will be tires. Production and sales of tires have been predicted to break all previous years' records because of increasing demand and the efforts to replenish inventories depleted by the 1976 strike.

Radial tires for automobiles (and for trucks and buses) will gain a larger percentage of the domestic market in 1977. Some producers fear that in the long run the greater mileage life of radials could put a damper on

annual growth; but others agree that most Americans tend to underinflate their tires and usually realize less than half of the 50-percent extra tread life that radials allegedly offer. In any case, foreign tire sources made further inroads into the U.S. market during the 1976 strike, and U.S. producers will have an uphill battle to regain those lost sales.

Nontire synthetic elastomers will see strong growth at least through 1980. Industrial hose markets are projected to grow 5 percent per year with the upswing in production of hydraulic, offshore drilling, and mining equipment and with the recovery of the automobile industry. Rubber hose will also be used as a less expensive alternative to rigid metal piping in more and more applications.

Rubber and reinforced rubber belting have enjoyed tremendous growth since 1974. The coal industry is the major contributing factor--conveyor belting is the most efficient and economical way to handle bulk materials such as coal and other mined products. Sales of belting are expected to climb 8 to 9 percent annually through 1980.

A conservative estimate for growth of U.S. synthetic rubber consumption through 1980 would be about 3 percent annually, barring unusual economic conditions. At that rate U.S. consumption will reach 2.4 billion pounds by 1980. Total U.S. consumption of all rubber could reach over 7 billion pounds by the year 2000. This estimate allows for longrun growth of less than 3 percent, taking into account recessionary periods and other possible (temporary) negative economic influences.

TABLE 1.--ELASTOMERS (SYNTHETIC RUBBER):¹ U.S. PRODUCTION AND SALES, 1976

[Listed below are all elastomers (synthetic rubber) for which reported data on production or sales may be published. (Leaders (...) are used where the reported data are accepted in confidence and may not be published or where no data were reported.) Table 2 lists all elastomers for which data on production and/or sales were reported and identifies the manufacturers of each]

ELASTOMERS	PRODUCTION ²	SALES		
		QUANTITY ²	VALUE	UNIT VALUE ³
	1,000	1,000	1,000	Per
	pounds	pounds	dollars	pound
Grand total-----	5,385,800	3,710,137	1,529,062	\$0.41
Cyclic-----	3,146,083	1,970,636	560,386	.28

Styrene-butadiene-vinylpyridine type-----	29,832	10,567	7,308	.69
Urethane type-----	(⁷)	(⁷)	(⁷)	(⁷)
All other elastomers ⁸ -----	1,099,914	1,088,530	615,085	.57

¹ The term "elastomers" is defined as substances in bale, crumb, powder, latex, and other crude forms which can be vulcanized or similarly processed into materials that can be stretched at 68° F. to at least twice their original length and, after having been stretched and the stress removed, will return with force to approximately their original length.

² Includes oil content of oil-extended elastomers.

³ Calculated from rounded figures.

⁴ Included in "All other elastomers". The production of polychloroprene rubber in 1976 was reported by the Rubber Manufacturers' Association to be 164,581 metric tons (362,839,000 pounds).

⁵ Included in "All other elastomers". The production of butyl rubber in 1976 was reported by the Rubber Manufacturers' Association to be 125,493 metric tons (276,662,000 pounds).

⁶ Included in "All other elastomers". The production of polyisoprene rubber in 1976 was reported by the Rubber Manufacturers' Association to be 74,428 metric tons (164,084,000 pounds).

⁷ The data on production and sales of urethane elastomers are reported in the section "Plastics and Resin Materials" with urethane plastics and polyols.

⁸ Includes production and sales data for acrylic ester, butyl, chloroprene, epichlorohydrin, fluorinated, isobutylene, isoprenes, and polysulfide elastomers, certain solution elastomers, carboxylated SBR latex, chlorinated rubber, chlorosulfonated polyethylene, thermoplastic rubber, miscellaneous elastomers.

TABLE 2.--ELASTOMERS FOR WHICH U.S. PRODUCTION AND/OR SALES WERE EITHER REPORTED OR ESTIMATED, IDENTIFIED BY MANUFACTURER, 1976

(CHEMICALS FOR WHICH SEPARATE STATISTICS ARE GIVEN IN TABLE 1 ARE MARKED BELOW WITH A "@"; CHEMICALS NOT SO MARKED DO NOT APPEAR IN TABLE 1 BECAUSE THE REPORTED DATA ARE ACCEPTED IN CONFIDENCE AND MAY NOT BE PUBLISHED. MANUFACTURERS IDENTIFICATION CODES SHOWN BELOW ARE TAKEN FROM TABLE 3. AND "X" SIGNIFIES THAT THE MANUFACTURER DID NOT CONSENT TO HIS IDENTIFICATION WITH THE DESIGNATED PRODUCT. COMPANY IDENTIFICATION CODES WHICH ARE FOLLOWED BY AN "(E)" ARE SO LABELED BECAUSE THE COMPANY FAILED TO SUPPLY THE U. S. INTERNATIONAL TRADE COMMISSION WITH THEIR DATA IN SUFFICIENT TIME FOR ITS INCLUSION IN THIS REPORT. THE COMPANY IS PRESUMED TO HAVE CONTINUED PRODUCTION OF THE COMPOUND IN QUESTION IN 1976 AND THE VOLUME OF PRODUCTION AND SALES HAS BEEN ESTIMATED BY THE USYC STAFF MEMBERS)

PLASTICIZERS

Edmund Cappuccilli and Louis N. DeToro

Plasticizers are organic chemicals that are added to synthetic plastics and resin materials to (1) improve workability during fabrication, (2) extend or modify the natural properties of these materials, or (3) develop new improved properties not present in the original material. Table 1 presents statistics on U.S. production and sales of plasticizers in as great a detail as is possible without revealing the operations of individual producers.

U.S. production of plasticizers totaled 1,587 million pounds in 1976, an increase of 17.4 percent from the 1,352 million pounds reported for 1975. Sales of plasticizers totaled 1,466 million pounds, valued at \$566 million, in 1976, compared with 1,338 million pounds, valued at \$470 million, in 1975.

Production of cyclic plasticizers in 1976, which consisted chiefly of the esters of phthalic anhydride, phosphoric acid, and trimellitic acid, amounted to 1,186 million pounds, an increase of 14.2 percent from the 1,038 million pounds reported for 1975. Sales of cyclic plasticizers in 1976 totaled 1,111 million pounds, valued at \$360 million, compared with 1,042 million pounds, valued at \$308 million, in 1975. The most important cyclic plasticizer was di(2-ethylhexyl) phthalate, with production of 297 million pounds, in 1976.

Production of acyclic plasticizers in 1976 totaled 402 million pounds, an increase of 28.1 percent from the 313 million pounds reported for 1975. Sales of acyclic plasticizers totaled 355 million pounds, valued at \$206 million, in 1976, compared with 296 million pounds, valued at \$162 million, in 1975. Epoxidized soya oils were the most important acyclic plasticizer in 1976 with production of 91 million pounds.

TABLE 1.--PLASTICIZERS:¹ U.S. PRODUCTION AND SALES, 1976

[Listed below are plasticizers for which any reported data on production and/or sales may be published. (Leaders (...) are used where the reported data are accepted in confidence and may not be published or where no data were reported.) Table 2 lists separately all plasticizer chemicals for which data on production and/or sales were reported and identifies the manufacturers of each.]

PLASTICIZERS	SALES				
	PRODUCTION	QUANTITY			UNIT VALUE ²
		1,000 pounds	1,000 pounds	1,000 dollars	
Grand total-----	1,587,434	1,465,711	566,265	\$0.39

All other acyclic plasticizers ⁶ -----	118,350	100,300	73,450	.73

¹ Includes data for compounds used principally (but not exclusively) as primary plasticizers. Does not include clearly defined extenders of secondary plasticizers.

² Calculated from rounded figures.

³ Includes benzenoid products as defined in part 1 of schedule 4 of the Tariff Schedules of the United States Annotated.

⁴ Includes data for dibutyl phenyl phosphate, diphenyl octyl phosphate, tricresyl phosphate and other phosphate esters.

⁵ Includes data for alkylated naphthalene, glycol dibenzoates, isopropylidenediphenoxypropanol, toluenesulfonamides, tetrahydrofurfuryl oleate, and other cyclic plasticizers.

⁶ Includes data for azelaic, citric and acetylcitric, myristic, palmitic, pelargonic, ricinoleic, acetylricinoleic, glyceryl, and glycol esters, and other acyclic plasticizers.

TABLE 2.--PLASTICIZERS FOR WHICH U.S. PRODUCTION AND/OR SALES WERE EITHER REPORTED OR ESTIMATED, IDENTIFIED BY MANUFACTURER, 1976

(CHEMICALS FOR WHICH SEPARATE STATISTICS ARE GIVEN IN TABLE 1 ARE MARKED BELOW WITH A "®"; CHEMICALS NOT SO MARKED DO NOT APPEAR IN TABLE 1 BECAUSE THE REPORTED DATA ARE ACCEPTED IN CONFIDENCE AND MAY NOT BE PUBLISHED.)

MANUFACTURERS IDENTIFICATION CODES SHOWN BELOW ARE TAKEN FROM TABLE 3, AND "X" SIGNIIES THAT THE MANUFACTURER DID NOT CONSENT TO HIS IDENTIFICATION WITH THE DESIGNATED PRODUCT. COMPANY IDENTIFICATION CODES WHICH ARE FOLLOWED BY AN "®" ARE SO LABELED BECAUSE THE COMPANY FAILED TO SUPPLY THE U. S. INTERNATIONAL TRADE COMMISSION WITH THEIR DATA IN SUFFICIENT TIME FOR ITS INCLUSION IN THIS REPORT. THE COMPANY IS PRESUMED TO HAVE CONTINUED PRODUCTION OF THE COMPOUND IN QUESTION IN 1976 AND THE VOLUME OF PRODUCTION AND SALES HAS BEEN ESTIMATED BY THE USITC STAFF MEMBERS)

KF	Kay-Fries Chemicals, Inc.		
MON	Monsanto Co.		

Note.--Complete names and addresses of the above reporting companies are listed in table 1 of the appendix.

SURFACE-ACTIVE AGENTS

Edmund Cappuccilli

The surface-active agents included in this report are organic chemicals that reduce the surface tension of water or other solvents and are used chiefly as detergents, dispersing agents, emulsifiers, foaming agents, or wetting agents in either aqueous or nonaqueous systems. Waxes and products used chiefly as plasticizers are excluded. Surface-active agents are produced from natural fats and oils, from silvichemicals such as lignin, rosin, and tall oil, and from chemical intermediates derived from coal tar and petroleum. A major part of the output of the bulk chemicals shown in this report is consumed in the form of packaged soaps and detergents for household and industrial use. The remainder is used in the processing of textiles and leather, in ore flotation and oil-drilling operations, and in the manufacture of agricultural sprays, cosmetics, elastomers, foods, lubricants, paint, pharmaceuticals, and many other products.

The statistics for production and sales of surface-active agents are grouped by ionic class and by chemical class and subclass. All quantities are reported in terms of 100-percent organic surface-active ingredient and thus exclude all inorganic salts, water, and other diluents. Sales statistics reflect sales of bulk surface-active agents only; sales of formulated products are excluded.

Total U.S. production of surface-active agents in 1976 amounted to 4,582 million pounds, or 5.4 percent greater than the 4,349 million pounds reported for 1975. Sales of bulk surface-active agents in 1976 amounted to 2,512 million pounds, valued at \$821 million, compared with sales in 1975 of 2,182 million pounds, valued at \$717 million. In terms of quantity, sales in 1976 were 15.2 percent greater than in 1975; in terms of value, sales in 1976 were 14.5 percent greater than in 1975.

Production of anionic surface-active agents in 1976 amounted to 3,356 million pounds, or 73.2 percent of the total output reported for 1976. Sales of anionics in 1976 amounted to 1,440 million pounds valued at \$317 million.

Production of cationic surface-active agents in 1976 amounted to 252 million pounds, 11.9 percent greater than the 226 million pounds reported in 1975. Nonionic surface-active agents, however, continued to decline in production as only 957 million pounds were reported in 1976; 8.6 percent less than the 1,047 million pounds reported in 1975. Sales in both classes, however, showed increases over 1975. In terms of value, sales increased 12.0 percent for cationic surface-active agents and 17.2 percent for nonionic surface-active agents.

The difference between production and sales reflects inventory changes and captive consumption of soaps and surface-active agents by synthetic rubber producers, and by manufacturers of cosmetics, packaged detergents, bar soaps, and other formulated consumer products. In some instances the difference may also reflect quantities of surface-active agents used as chemical intermediates, e.g., non-ionic alcohol and alkylphenol ethoxylates which may be converted to anionic surface-active agents by phosphation or sulfation.

Surfactants

Although many analysts expected the surfactant industry to improve significantly in 1976, production increased by only 5 percent to 4.6 billion pounds. Sales of surface-active agents, however, increased by 15 percent over the 1975 figures to 2.5 billion pounds. The value of sales for 1976 also increased by 15 percent while, the average unit value remained at \$0.33.

The somewhat disappointing production figures are probably the result of a decrease in consumer demand in 1975 and the buildup of excess inventories which were liquidated in 1976. Some companies also reported a decrease in production in the fourth quarter of 1976 due to severe weather which curtailed production at some plants. This combination of factors, which made 1976 unique in the surfactant industry, are not expected to recur.

Several factors will affect the surfactant industry, and in particular the synthetic detergent industry, for the next several years. Some of the more important ones are the establishment of new markets, environmental or governmental controls, and the introduction of new surfactants into the market.

New markets may occur in the petroleum industry where the high price of crude oil justifies employment of new methods to increase production from old oil fields. Large amounts of sulfonated surfactants and cosurfactants such as ethoxylated alcohols will be employed for a promising process known as micellar flooding of old wells. Approximately 5 to 8 pounds of sulfonates and 1 pound of cosurfactant will be needed to recover one barrel of oil using this method. It has been estimated that between 30 and 40 billion barrels of oil can be recovered by micellar flooding.

Governmental controls on surfactant-containing products will probably increase over the next few years as consumers and Government officials become more aware of the potential hazard of certain products either to the consumer of the environment. The surfactant industry will thus be required to spend more time and research on the potential hazards of new products long before they reach the consumer market. The increased amount of time and research required for new products may cause some existing formulations, which have yet to be marketed, to be modified or terminated because of the increased cost. As a result, the surfactant producers will probably emphasize more research on the development of cheaper processes for existing major surfactants which have been proven to be consumer and environmentally safe. This decrease in basic research on surfactants should lead to fewer new products being introduced in the next several years.

Synthetic detergents

One of the main factors affecting the future of synthetic detergent formulations is the degree of restrictions placed by the U.S. Government

on phosphate content. Recent pressure by environmentalists and consumer groups has resulted in legislation being drafted to effectively ban phosphate-containing detergents in eight States bordering the Great Lakes. If this legislation becomes law, the detergent producers must either reformulate their products to conform with the new restrictions or introduce entirely new products for these States.

Because of the trend away from phosphates in detergents, the heavy-duty liquid detergents, which contain no phosphates, have come into prominence in the past few years. The following is a typical heavy-duty nonphosphate liquid detergent formulation (in percent):

Anionic surfactant (linear alkylbenzenesulfonate)	-----10
Nonionic surfactant (alcohol ethoxylate)	-----35
Ethanol	-----10
Triethanolamine	-----5
Water	-----35
Miscellaneous	-----5

As can be seen by this information, approximately 45 percent of the detergent is composed of surface-active agents, chiefly alcohol ethoxylates. This development began about 1965 and has been responsible for the fast growth in the production of alcohol ethoxylates, as follows (in millions of pounds): 1/

	<u>Linear alcohol</u> <u>ethoxylates</u>	<u>Dodecylbenzene</u> <u>sulfonates</u>
1965	-----190	565
1970	-----328	561
1975	-----506	520
1976	-----540	538

The growth in the use of the alcohol ethoxylates should continue as phosphates are phased out of heavy-duty powder detergents.

Another boost for the (higher-priced) alcohol ethoxylates came after the Arab oil embargo when the prices of raw materials for the benzene sulfonates increased at a faster rate than those for the alcohol ethoxylates. This advantage has now run its course; future price increases may actually favor the benzene sulfonates.

Foreign trade and industry

Imports of surfactants and, in particular, synthetic detergent formulations have generally not been increasing substantially during the past few years.

1/ From U.S. International Trade Commission publications.

In 1975, imports of synthetic detergents (TSUS items 405.35 and 466.30) reached their highest level with 5.7 million pounds. However, in the following year, 1976, imports dropped to 5.0 million pounds. This trend seems likely to continue well into 1977.

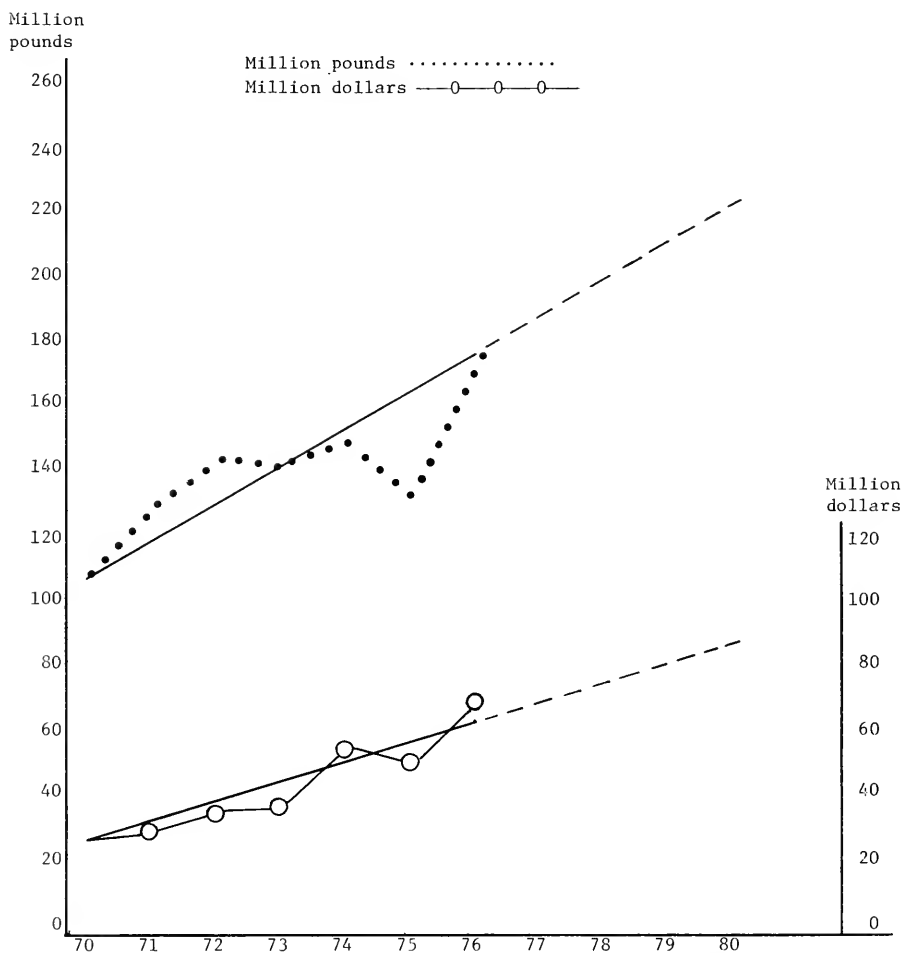

One of the main reasons for this decline is that the U.S. industry supplies virtually all the U.S. market demand at strongly competitive prices. Even in the peak import year, 1975, the import-to-consumption ratio was only 1 percent.

The level of imports is expected to remain in the range of 4 to 7 million pounds for the next several years. Any increase in imports would probably be due to an increased demand for specialty products and not to an increase in overall domestic demand.

Exports, on the other hand, have been increasing over the past few years at approximately 25 percent per year. The following chart projects exports to 1980. The projection is based on the expected increased costs of raw materials, fuel, transportation, wages, and the increasing production of detergents by foreign industries.

Japan is one country that has recovered quite rapidly from the recent economic recession. Their total production and exports of synthetic detergents for 1977 are expected to exceed their previous alltime high production level. Similar situations exist in other major exporting countries, possibly causing increasing competition for the world markets in synthetic detergents in the coming years. These factors are responsible for the expectation that export growth through 1980 will be in the range of 7 to 10 percent per year rather than the 25 percent-per-year level of the recent past.

Hexadecyl alcohol, ethoxylated-----	651	761	666	\$0.87
Mixed linear alcohols, ethoxylated-----	228,282	363,235	105,674	.29
Mixed linear alcohols, ethoxylated and pro-				
poxylated-----	17,441	14,281	6,080	.43
9-Octadecenyl alcohol, ethoxylated-----	944	763	607	.79
Octadecyl alcohol, ethoxylated-----	1,759	894	953	1.07
All other-----	99,567	2,325	1,647	.64
Other ethers and thioethers, total-----	65,991	51,924	27,063	.52
Tridecyl alcohol, ethoxylated-----	8,188	7,111	3,871	.54
All other-----	57,803	44,813	23,192	.52
Other nonionic surface-active agents-----	3,286	2,920	3,538	1.21

¹ All quantities are given in terms of 100 percent organic surface-active ingredient.

² Sales include products sold as bulk surface-active agents only.

³ Calculated from rounded figures.

⁴ The term "benzenoid," used in this report, describes any surface-active agent, except lignin derivatives, whose molecular structure includes 1 or more 6-membered carbocyclic or heterocyclic rings with conjugated double bonds (e.g., the benzene ring or the pyridine ring).

⁵ Includes ligninsulfonates.

⁶ Includes production of "all other" sulfated alcohols and other acids, amides, and esters, sulfated.

⁷ Includes ethoxylated sorbitol esters, polyglycerol esters, and miscellaneous esters.

TABLE 2.--SURFACE-ACTIVE AGENTS FOR WHICH U.S. PRODUCTION AND/OR SALES WERE EITHER REPORTED OR ESTIMATED, IDENTIFIED BY MANUFACTURER, 1976

(CHEMICALS FOR WHICH SEPARATE STATISTICS ARE GIVEN IN TABLE 1 ARE MARKED BELOW WITH A "®"; CHEMICALS NOT SO MARKED DO NOT APPEAR IN TABLE 1 BECAUSE THE REPORTED DATA ARE ACCEPTED IN CONFIDENCE AND MAY NOT BE PUBLISHED.)

MANUFACTURERS IDENTIFICATION CODES SHOWN BELOW ARE TAKEN FROM TABLE 3. AND "X" SIGNIFIES THAT THE MANUFACTURER DID NOT CONSENT TO HIS IDENTIFICATION WITH THE DESIGNATED PRODUCT. COMPANY IDENTIFICATION CODES WHICH ARE FOLLOWED BY AN "(E)" ARE SO LABELED BECAUSE THE COMPANY FAILED TO SUPPLY THE U. S. INTERNATIONAL TRADE COMMISSION WITH THEIR DATA IN SUFFICIENT TIME FOR ITS INCLUSION IN THIS REPORT. THE COMPANY IS PRESUMED TO HAVE CONTINUED PRODUCTION OF THE COMPOUND IN QUESTION IN 1976 AND THE VOLUME OF PRODUCTION AND SALES HAS BEEN ESTIMATED BY THE USITC STAFF MEMBERS)

SURFACE-ACTIVE AGENTS	MANUFACTURERS IDENTIFICATION CODES (ACCORDING TO LIST IN TABLE 3)
A M P H O T E R I C

Note.--Complete names and addresses of the above reporting companies are listed in table 1 of the appendix.

PESTICIDES AND RELATED PRODUCTS

PESTICIDES AND RELATED PRODUCTS

Edmund Cappuccilli

Pesticides and related products include fungicides, herbicides, insecticides, rodenticides, and related products such as plant growth regulators, seed disinfectants, soil conditioners, soil fumigants, and synergists. The data are given in terms of 100 percent active materials; they thus exclude such materials as diluents, emulsifiers, and wetting agents.

U.S. production of pesticides and related products in 1976 amounted to 1,364 million pounds--14.9 percent less than the 1,603 million pounds reported for 1975 (table 1).¹ Sales in 1976 were 1,193 million pounds, a decrease of 10.2 percent, as compared with 1,328 million pounds reported in 1975; the value of sales was \$2,410 million in 1976, compared with \$2,366 million in 1975--a small increase of 1.8 percent.

The output of cyclic pesticides and related products amounted to 940 million pounds in 1976--21.4 percent less than the 1,196 million pounds produced in 1975. Sales in 1976 were 839 million pounds, valued at \$1,844 million, compared with 965 million pounds, valued at \$1,891 million in 1975. Production of acyclic pesticides and related products in 1976 amounted to 424 million pounds, compared with 407 million pounds reported for 1975, an increase of 4.3 percent. Sales in 1976 were 354 million pounds, a decrease of about 2.6 percent, as compared with 363 million pounds reported in 1975; the value of sales was \$566 million in 1976, compared with \$475 million in 1975--an increase of 19.1 percent.

¹ See also table 2 which lists these products and identifies the manufacturers by codes. These codes are given in table 3.

Pesticides

In 1976, while other sectors of the chemical industry were rebounding from the recession of 1975, the production of synthetic organic pesticides decreased by approximately 15 percent. The quantity of sales also declined from the 1975 figures by 10 percent. The value of sales, however, remained at its 1975 level as the average unit value for pesticides increased from \$1.78 in 1975 to \$2.02 in 1976.

Weather conditions in various parts of the country and surplus inventories in the hands of both distributors and consumers are the causal factors behind the declines in production and in the quantity of sales. These factors, which depressed the industry in 1976, were temporary, and the statistics for 1977 should show improvement. The value of sales in 1976 (and 1977) has shown signs of slowing down as compared with previous years' increases. In 1974 and 1975, increases were approximately 32 percent per year while the unit values went from \$1.33 to \$1.78. These earlier increases were attributed principally to higher costs for fuel, labor, transportation, and raw materials which were often in short supply.

Herbicides

Herbicides were again the leading class of pesticides produced in the United States in 1976, accounting for approximately 50 percent of the total pesticides production as compared with 49 percent of the total in 1975. Herbicides' share of the total pesticide market in 1976 had earlier been estimated by industry to be much larger than 50 percent because of increased planting of certain crops in 1976. However, drought conditions in the Midwest and the West coupled with the price resistance of farmers all but eliminated the predicated larger increase. Production of most types of herbicides has been increasing over the past few years; however, for one class, the phenoxyacetic acids and their derivatives, production has been slowly declining. The main products in the group are 2,4-dichlorophenoxyacetic acid (2,4-D), 2,4,5-trichlorophenoxyacetic acid (2,4,5-T), and their derivatives. In 1970, 10 companies were actively producing approximately 60 million pounds of these herbicides for consumption both here and abroad. By 1976, only seven companies were producing approximately the same amount of these herbicides while the total production of herbicides had increased from 404 million pounds in 1970 to over 800 million pounds in 1976. The two major reasons for the lack of growth of the phenoxyacetic acid herbicides are the increased use in the recent years of newer herbicides (e.g., triazine and urea-derivative herbicides), increased environmental controls, and greater competition by foreign pesticide producers.

Insecticides

The most significant trend in the production of insecticides in recent years has been the decrease of the organochlorine insecticides

(e.g., DDT) and the rise in the production of the organophosphorous insecticides (e.g., methyl parathion). This trend is illustrated in the following graph. The decline in the output of the organochlorine-type of insecticides can be attributed to two major factors: (1) a decrease in product effectiveness, and (2) an increase in regulations by the Environmental Protection Agency (EPA). With regard to product effectiveness, it has become apparent that insects exposed to a certain insecticide over a long period of time begin to develop immunity to that insecticide. The use of alternate products, such as organophosphorous insecticides, every other year decreases the degree of immunity.

In 1972, the EPA banned the use of DDT in the United States except in cases of extreme infestation. Since then, that agency has banned or severely limited the use of several other chlorinated insecticides, among them aldrin, chlordane, dieldrin, heptachlor, and mirex. Additional organochlorine insecticides are under investigation by the EPA for possible restriction in the near future. Further restrictions and controls will decrease the production of organochlorine insecticides still further in the next few years.

The production of organophosphorous insecticides surpassed the production of organochlorine insecticides for the first time in 1975 as pesticides producers began to increase production of alternative insecticides for farm use to replace aldrin and dieldrin, which were banned in 1974. The production of other insecticides, mainly the organophosphorous compounds, should increase rapidly over the next several years.

Imports and foreign industry

During the past few years, imports of benzenoid pesticides (TSUS item 405.15) have increased at a dramatic rate. In 1975, 50.4 million pounds of pesticides were imported into the United States. This was a 78-percent increase over 1974 when only 28.3 million pounds were imported. In 1976, benzenoid pesticide imports amounted to 62.1 million pounds, an increase of 23 percent over 1975, and they accounted for 7 percent of domestic consumption.

A sharp decline in the level of domestic inventories of pesticides in 1974 was a major reason for the large increase in imports of pesticides in 1975 over 1974. This drop in inventories was attributed to the oil embargo which led to raw material shortages and a resultant slowdown in the production of pesticides. Inventories were more than restored in 1975. The unit values and prices of imports have also increased, owing to an increase in demand as well as increases in the costs of transportation and fuel. The following table shows the increase in the value of imported benzenoid pesticides which occurred between 1974 and 1975. The 1975 value

of \$97.1 million was 127 percent over the 1974 value. The value of imports in 1976 amounted to \$128.8 million, an increase of 33 percent over that in 1975. It is expected that future increases in the value of pesticides will average about 10 to 15 percent per year.

For the past few years, imports of pesticides into the United States have come principally from four countries: Japan, Switzerland, the United Kingdom, and West Germany. As shown in the following table, these four countries have annually accounted for well over half of the imports under TSUS item 405.15 during the period 1973-76. From 1973 to 1975, United Kingdom producers annually allocated a large share of their expenditures to pesticide research and development. These producers have two distinct advantages over their U.S. counterparts in the area of research and development of new pesticides. First, it costs considerably less in the United Kingdom to develop a new pesticide than in the United States; approximately 50 percent less in some cases. Second, the United Kingdom has a more favorable working relationship between government and industry concerning the registration of new pesticides for public use. In addition, their firms aggressively market their new pesticide products in all the world markets, especially in the United States.

It does not seem likely that the growth of production and sale of pesticides in the future will match the gains of the past. Increasing pesticide prices caused by rising costs of raw materials, research, and Government registration will probably keep sales from rising at their previous rate. However, increased food production for both domestic and foreign markets and increased exports of pesticides to foreign markets should provide the industry with moderate growth in the near future.

U.S. Imports of pesticides, 1/ 1973-76

Principal sources of imports

	Source	1973	1974	1975	1976
Quantity (in 1,000 lbs)	United Kingdom	15,381	16,759	17,587	12,988
	West Germany	2,962	3,125	7,362	15,732
	Japan	3,634	2,293	3,922	5,613
	Switzerland	1,337	1,131	6,388	10,885
	Canada	987	1,793	4,842	2,289
	All other countries	<u>4,550</u>	<u>3,241</u>	<u>10,315</u>	<u>14,607</u>
	Total imports		28,851	28,342	50,416
Value (in \$1,000)	United Kingdom	17,121	22,197	29,493	19,904
	West Germany	5,138	7,327	20,035	48,643
	Japan	3,936	3,210	6,323	10,599

ORGANOCHLORINE INSECTICIDES AND ORGANOPHOSPHOROUS INSECTICIDES:
U.S. PRODUCTION, 1970-76

1/ Includes aldrin, chlordan, DDT, dieldrin, endrin, heptachlor, and others.

2/ Includes acephate, diazinon, fonofos, methyl parathion, parathion, phorate, and others.

Source: Compiled from data contained in various U.S. International Trade Commission publications.

Note: Data are partially estimated.

PESTICIDES AND RELATED PRODUCTS

TABLE 1.--PESTICIDES AND RELATED PRODUCTS: U.S. PRODUCTION AND SALES, 1976

[Listed below are all pesticides and related products for which any reported data on production or sales may be published. (Leaders (...)) are used where the reported data are accepted in confidence and may not be published or where no data were reported.) Table 2 lists all pesticides and related products for which data on production and/or sales were reported and identifies the manufacturers of each]

PESTICIDES AND RELATED PRODUCTS	PRODUCTION		SALES	
	QUANTITY	VALUE	QUANTITY	UNIT VALUE ¹

See footnotes on following page.

SYNTHETIC ORGANIC CHEMICALS, 1976

Footnotes for Table 1

- ¹ Calculated from rounded figures.
- ² Includes benomyl, captafol, captan, chlorothalonil, dinocap, DMTT, folpet, pentachloronitrobenzene, sodium pentachlorophenate, 2,4,5-trichlorophenol salts, all other phenylmercury compounds, and others.
- ³ Includes alachlor, atrazine, barban, benefin, bensulide, 2,4-D acid (esters and salts), 2,4-DB, dicamba, dimethylurea compounds, dinitrophenol compounds, isopropyl phenylcarbamates (IPC and ClPC), MCPA, molinate, NPA, picloram, propanil, silvex and its esters, 2,4,5-T acid (esters and salts), triazines, trifluralin, uracils, and others.
- ⁴ Includes carbophenothion, diazinon, dioxathion, fensulfothion, methyl parathion, parathion, ronnel, and other phosphorothioates and phosphorodithioates, and others.
- ⁵ Includes carbaryl, carbofuran, chlorinated insecticides (BHC + lindane, chlordan, chlorobenzilate, DDT, dicofol, endosulfan, endrin, heptachlor, methoxychlor, and others), insect attractants, DEET and other insect repellents, small amounts of rodenticides, piperonyl butoxide and other synergists, and others.
- ⁶ Includes ferbam, maneb, nabam, PETD, and zineb, plus the remaining dithiocarbamates which are used chiefly as fungicides.
- ⁷ Includes dodine, and others.
- ⁸ Includes cacodylic acid, CDAA, dalapon, methanearsonic acid salts, sodium TCA, thiocarbamates, thiolcarbamates, and organophosphorus herbicides, and others.
- ⁹ Includes dichlorvos, disulfoton, ethion, malathion, monocrotophos, naled, phorate, and other organophosphorus insecticides.
- ¹⁰ Includes DBCP, soil conditioners and fumigants, aldicarb, small quantities of rodenticides, and others.

Note.--Does not include data for the insect fumigant, p-dichlorobenzene nor the fungicide, o-phenylphenol. These data are included in the section on cyclic intermediates. It also does not include data for the fungicides, dimethyl-dithiocarbamic acid, sodium salt and dimethylidithiocarbamic acid, zinc salt (i.e., ziram). These data are included in the section on "Rubber-Processing Chemicals." The data for ethylene dibromide, a fumigant, are included in the "Miscellaneous End-Use Chemicals and Chemical Products" section.

TABLE 2.--PESTICIDES AND RELATED PRODUCTS FOR WHICH U.S. PRODUCTION AND/OR SALES WERE EITHER REPORTED OR ESTIMATED, IDENTIFIED BY MANUFACTURER, 1976

(CHEMICALS FOR WHICH SEPARATE STATISTICS ARE GIVEN IN TABLE 1 ARE MARKED BELOW WITH A "a"; CHEMICALS NOT SO MARKED DO NOT APPEAR IN TABLE 1 BECAUSE THE REPORTED DATA ARE ACCEPTED IN CONFIDENCE AND MAY NOT BE PUBLISHED. MANUFACTURERS IDENTIFICATION CODES SHOWN BELOW ARE TAKEN FROM TABLE 3. AND "X" SIGNIFIES THAT THE MANUFACTURER DID NOT CONSENT TO HIS IDENTIFICATION WITH THE DESIGNATED PRODUCT. COMPANY IDENTIFICATION CODES WHICH ARE FOLLOWED BY AN "E" ARE SO LABELED BECAUSE THE COMPANY FAILED TO SUPPLY THE U. S. INTERNATIONAL TRADE COMMISSION WITH THEIR DATA IN SUFFICIENT TIME FOR ITS INCLUSION IN THIS REPORT. THE COMPANY IS PRESUMED TO HAVE CONTINUED PRODUCTION OF THE COMPOUND IN QUESTION IN 1976 AND THE VOLUME OF PRODUCTION AND SALES HAS BEEN ESTIMATED BY THE USIC STAFF MEMBERS)	PESTICIDES AND RELATED PRODUCTS	MANUFACTURERS IDENTIFICATION CODES (ACCORDING TO LIST IN TABLE 3)

KF	Kay-Fries Chemicals, Inc.	USR	Uniroyal, Inc., Chemical Div.
LAK	Lakeway Chemicals, Inc.	VCC	Vinings Chemical Co.
LIL	Eli Lilly & Co.	VEL	Velsicol Chemical Corp.
MAL	Mallinckrodt Chemical Works	VIN	Vineland Chemical Co.
MCJ	Mooney Chemical Corp.	VNC	Vanderbilt Chemical Corp.
		VTC	Vicksburg Chemical Co. Div. of Vertac Consolidated
		WTC	Witco Chemical Co., Inc.

Note.--Complete names and addresses of the above reporting companies are listed in table 1 of the appendix.

MISCELLANEOUS END-USE CHEMICALS AND CHEMICAL PRODUCTS

K. James O'Connor, Jr. and Thomas O'Connell

The Miscellaneous Chemicals section was extensively revised in 1976 to incorporate the proposed suggestions of an industry task force. Because there is a radical shift in the composition of this section as well as in many of the subgroups within this section, the 1976 data are not strictly comparable with previous reports. Production of the end-use groups contained within other sections generally increased over 1975 levels paralleling the organic sector as a whole. This section incorporates those end-use groups which are not readily classifiable within the prior sections of this report. Both cyclic and acyclic chemicals now fall with this section.

In 1976, the production of miscellaneous end-use chemicals exceeded 15.8 billion pounds. Sales in 1976 reached 9.2 billion pounds, valued at \$2.3 billion. Polymers for fibers and urea collectively accounted for 84 percent of the 1976 production of these miscellaneous end-use chemicals. Urea, alone, accounted for 71 percent of the 1976 sales quantity of these chemicals although in terms of value it accounted for only 17 percent of the total value of merchant sales.

Production of gasoline additives for 1976 totalled 1.1 billion pounds. Sales exceeded 931 million pounds, valued at \$736 million. The future growth of the lead additive portion of this market is seriously threatened by pending environmental legislation governing its use.

Methanol

Methanol production rebounds in 1976

In 1976, methanol ranked 20th among the 50 most important U.S. industrial chemicals with production in excess of 6.2 billion pounds. This volume represented a significant increase of 21.6 percent over the 1975 level of 5.2 billion pounds, a figure which reflected the doldrums that industrial chemical producers faced in the recession of 1975. Despite this encouraging increase in the 1976 production of methanol, it, nonetheless, lagged 1973 and 1974 output figures and remained slightly below the recent trend line shown in figure 1. On a more optimistic note, methanol fared better in 1976 than the organic chemicals sector as a whole, which registered an overall increase of 18 percent in production over the 1975 level.

Moderate growth of 5 to 6 percent projected for methanol

Industry sources are projecting, amid considerable speculation, that methanol production for nonfuel use will expand at a moderate rate of 5 to 6 percent a year for the remainder of this decade and into the early 1980's. These projections are predicated to some extent on the level of new housing starts reaching 1.5 to 2.0 million a year for the remainder of the decade. The correlation between methanol and the number of housing starts stems from methanol's major end use as an adhesive in the production of plywood and particle board, products which are sensitive to changes in the rate of new housing construction. On this score, methanol producers have reason to be encouraged with the renewed activity in the housing sector in recent months. In 1976, total new housing starts numbered 1.55 million, 32 percent more than in 1975. Through the first quarter of 1977, the 370,000 recorded new housing starts are well ahead of the 283,000 recorded in the first quarter of 1976 and dramatically ahead of the 194,000 recorded in the first quarter of 1975.^{1/} Despite this upward trend, producers remain guarded in their projections, in that a sustained surge in housing construction will be largely dependent upon the Nation's ability to contain its inflation rate and to maintain a prime rate low enough to encourage new housing.

The 5 to 6 percent projected growth rate is also dependent upon the producers' ability to achieve moderate growth in methanol's other multiple commercial markets, such as the polyester fiber and solvent markets.

Domestic capacity expected to keep pace with projected demand through 1980

There is a general consensus among industry experts that new capacity additions scheduled for completion by 1980 will keep pace with projected

^{1/} U.S. Department of Commerce, Survey of Current Business, November 1976 (vol. 56, No. 11) and May 1977 (vol. 57, No. 5).

demand requirements. By 1980, U.S. capacity for methanol production is projected to reach 11 billion to 12 billion pounds a year, representing a 20-percent increase over current capacity levels. DuPont, alone, is scheduled to place a new plant with a capacity of 1.3 billion pounds a year on stream by 1980.

Domestic demand estimates, excluding methanol produced for fuel use, border on 8 billion pounds a year for 1980, representing an increase of 5 to 6 percent a year in the domestic demand for methanol.

Methanol may make inroads into new markets

There is continued speculation as to whether methanol will make new inroads into two potentially significant markets; one for clean-burning automotive fuel and the other for an intermediate in the production of a synthetic food source--single-cell protein.

In recent years methanol has undergone considerable testing for use in automotive fuel applications, the results of which have not to date been encouraging. However, testing continues, and industry sources forecast that if a breakthrough occurs, there will be a dramatic shift in the composition of the industry away from traditional chemical producers and toward the oil producers and refiners. The reason for this possible shift is that methanol (a primary chemical feedstock) is derived directly from natural gas, and is very close in the vertical chain to traditional oil producers' and refiners' markets. It must be pointed out, however, that such a breakthrough and consequential shift in production is certainly not expected over the short term and is questionable on a cost/performance basis over the long term.

The outlook is unclear for methanol's use as an intermediate in the production of single-cell protein, a product which is still very much in its experimental stages. The benefits of single-cell protein in alleviating some of the world's nutritional needs are potentially great, and one would expect significant markets to open for this product if technical and commercial difficulties can be overcome. Although inconclusive, current research indicates a leaning away from methanol as an intermediate in the production of single-cell protein in favor of ethanol.

Methanol imports on the rise

Imports of methanol for nonfuel use reached a record high of 277 million pounds valued at \$8.5 million, in 1976, representing nearly a 150-percent increase by volume over the 1975 level. These imports supplied approximately 4 to 5 percent of domestic demand in 1976, or more than twice as much as in any other year in this decade; more than 70 percent come from Canada. Imperial Chemical Industries and Alberta Gas Chemicals are believed to be the major exporting companies to the United States.

According to Public Law 93-482, enacted October 26, 1974, methanol can be imported into the United States under TSUS item 427.96 free of duty (col. 1 rate) for fuel use or for use in producing synthetic natural gas. In 1976, 6.9 million pounds of methanol valued at \$289,000 entered the United States under this category, a significant increase over the 3,700 pounds of methanol imported under this category in 1975.

Imports of methanol under the nonfuel use category in the first quarter of 1977 were substantially higher than those in the first quarter of 1976, indicating that imports are continuing their rising trend. Imports through the first quarter of 1977 reached 79 million pounds, compared with 53 million pounds imported through the first quarter of 1976. There were no imports of methanol for fuel use recorded in the first quarter of 1977.

Exports increase 22 percent over the 1975 level

Exports of methanol, both natural and synthetic, increased from 458 million pounds, valued at \$16.8 million, in 1975 to 561 million pounds, valued at \$23.2 million in 1976. There is no indication of fundamental changes in the composition of U.S. export markets for methanol.

The international outlook for methanol through 1980's is unclear

There is little question that the chief determinant in the future competitiveness of world methanol producers will be raw material costs. The most economic technology, the Imperial Chemical Industries process, is readily licensable, and as such is no longer a crucial variable in establishing a nation's comparative advantage vis-a-vis other producing nations. Labor cost differences are not likely to be major determinants in the competitiveness of methanol producers, given the facts that the labor input in methanol production is low and that these differences in labor costs have equilibrated in recent years. Thus, it would seem that the future competitiveness of world methanol producers will greatly depend upon their ability to secure an adequate long-term raw material supply at a competitive price.

Given this determinant, all eyes are directed toward the announced plant construction in the Middle East, which, if it materializes could substantially alter established trading patterns not only in methanol but in many other commodity chemicals as well. There are, however, a number of indeterminate factors which may well mitigate the raw material cost advantages that these oil-rich nations currently enjoy. Their construction and distribution costs are presently much higher than those in the developed nations. In addition, these oil-rich nations may well decide to upgrade the commodity chemicals with low unit costs into intermediate and end-use products with higher unit values; the trade impact would then be felt in those sectors.

Figure 1.--Methanol: United States Production, Exports, and Imports, 1971-76

MISCELLANEOUS END-USE CHEMICALS AND CHEMICAL PRODUCTS

TABLE 1.--MISCELLANEOUS END-USE CHEMICALS AND CHEMICAL PRODUCTS: U.S. PRODUCTION AND SALES, 1976

(Listed below are all miscellaneous end-use chemicals and chemical products for which any reported data on production and/or sales may be published. (Leaders (...) are used where the reported data are accepted in confidence and may not be published or where no data were reported.) Table 2 lists alphabetically all miscellaneous end-use chemicals and chemical products on which data on production and/or sales were reported and identifies the manufacturers of each.)

All other polymers for fiber-----	907,778	560,957	488,051	.87
Polymers, water soluble, total-----	⁶ 185,312	⁶ 161,018	⁶ 164,766	1.02
Cellulose ethers and esters, total-----	⁶ 115,294	⁶ 99,256	⁶ 101,250	1.02
Polyacrylamide-----	41,507	36,829	41,479	1.13
Polyacrylic acid salts, total-----	17,302	16,265	9,596	.59
Sodium polyacrylate-----	6,783
All other polyacrylic acid salts-----	10,519	16,265	9,596	.59
All other water soluble polymers-----	11,209	8,668	12,441	1.44
Tanning materials, synthetic-----	59,468	54,541	22,365	.41
Urea, total-----	8,161,726	6,524,000	376,363	.06
In feed compounds-----	490,378	421,679	26,585	.06
In liquid fertilizer-----	2,268,234	2,175,599	99,973	.05
In solid fertilizer-----	4,176,474	3,500,481	217,588	.06
In plastics-----	392,636	298,360	24,526	.08
All other-----	834,004	127,881	7,691	.06
All other miscellaneous end-use chemicals and chemical products ⁷ -----	43,374	28,296	93,518	3.30

See footnotes on following page.

SYNTHETIC ORGANIC CHEMICALS, 1976

Footnotes for Table 1

- ¹ Calculated from rounded figures.
- ² Not available.
- ³ Statistics exclude production and sales of tricresyl phosphate. Statistics on tricresyl phosphate are given with the section on "Plasticizers."
- ⁴ Quantities are given on the basis of solid naphthenate.
- ⁵ Statistics exclude production and sales of copper naphthenate. Statistics for copper naphthenate are given in the section on "Pesticides and Related Products."
- ⁶ Greater than 10 percent of this total is data which were estimated. It was necessary to estimate these data because one or more manufacturers of the compounds failed to supply the U.S. International Trade Commission with their data in sufficient time for its inclusion in this report. Such manufacturers are presumed to have continued production of the compound in question in 1976, therefore the volume of production and sales has been estimated by the USITC staff members.
- ⁷ Includes all other items listed in table 2 which are not individually publishable or publishable as groups.

TABLE 2.--MISCELLANEOUS END-USE CHEMICALS AND CHEMICAL PRODUCTS FOR WHICH U.S. PRODUCTION AND/OR SALES WERE EITHER REPORTED OR ESTIMATED, IDENTIFIED BY MANUFACTURERS, 1976

(CHEMICALS FOR WHICH SEPARATE STATISTICS ARE GIVEN IN TABLE 1 ARE MARKED BELOW WITH A "a": CHEMICALS NOT SO LABELED DO NOT APPEAR IN TABLE 1 BECAUSE THE REPORTED DATA ARE ACCEPTED IN CONFIDENCE AND MAY NOT BE PUBLISHED. MANUFACTURERS' IDENTIFICATION CODES SHOWN BELOW ARE TAKEN FROM TABLE 3. AN "X" SIGNIFIES THAT THE MANUFACTURER DID NOT CONSENT TO HIS IDENTIFICATION WITH THE DESIGNATED PRODUCT. COMPANY IDENTIFICATION CODES WHICH ARE FOLLOWED BY AN "(B)" ARE SO LABELED BECAUSE THE COMPANY FAILED TO SUPPLY THE U. S. INTERNATIONAL TRADE COMMISSION WITH THEIR DATA IN SUFFICIENT TIME FOR ITS INCLUSION IN THIS REPORT. THE COMPANY IS PRESUMED TO HAVE CONTINUED PRODUCTION OF THE COMPOUND IN QUESTION IN 1976 AND THE VOLUME OF PRODUCTION AND SALES HAS BEEN ESTIMATED BY THE USITC STAFF MEMBERS)

MISCELLANEOUS END-USE CHEMICALS AND CHEMICAL PRODUCTS	MANUFACTURERS' IDENTIFICATION CODES (ACCORDING TO LIST IN TABLE 3)
③CHELATING AGENTS, NITRILACIDS AND SALTS:	
(DIETHYLENEDINITRILLO)PENTAACETIC ACID	HMF.
(DIETHYLENEDINITRILLO)PENTAACETIC ACID, MONOSODIUM HYDROGEN FERRIC SALT	CGY (E).
③(DIETHYLENEDINITRILLO)PENTAACETIC ACID, PENTASODIUM SULFATE	CGY (E), DAN, DOW, HMF.
(DIETHYLENEDINITRILLO)PENTAACETIC ACID, SODIUM SALT	CGY (E), RPC.
N,N-DIHYDROXYETHYLENEGLICINE, SODIUM SALT	DAN, DOW, HMF.
ETHANOLDIGLYCINE, DISODIUM SALT	HMF.
(ETHYLENEDINITRILLO)TETRAACETIC (ETHYLENEDIAMINETETRAACETIC ACID) (EDTA)	DOW, HMF.
(ETHYLENEDINITRILLO)TETRAACETIC ACID, CALCIUM DISODIUM SALT	CGY (E), DOW.
(ETHYLENEDINITRILLO)TETRAACETIC ACID, DIAMMONIUM SALT	DOW, HMF.
(ETHYLENEDINITRILLO)TETRAACETIC ACID, DIPOTASSIUM ZINC SALT	HMF.
(ETHYLENEDINITRILLO)TETRAACETIC ACID, DISODIUM SALT	DOW, HMF.
(ETHYLENEDINITRILLO)TETRAACETIC ACID, DISODIUM COPPER SALT, DIHYDRATE	CGY (E), HMF.
(ETHYLENEDINITRILLO)TETRAACETIC ACID, DISODIUM ZINC SALT, DIHYDRATE	HMF.
(ETHYLENEDINITRILLO)TETRAACETIC ACID, MANGANESE SALT	HMF.
(ETHYLENEDINITRILLO)TETRAACETIC ACID, MONOAMMONIUM FERRIC SALT	HMF.
(ETHYLENEDINITRILLO)TETRAACETIC ACID, MONOSODIUM IRON SALT	HMF.
(ETHYLENEDINITRILLO)TETRAACETIC ACID, TETRAAMMONIUM SALT	DOW.
(ETHYLENEDINITRILLO)TETRAACETIC ACID, TETRAPOTASSIUM SALT	CGY (E), HMF.

TABLE 2.--MISCELLANEOUS END-USE CHEMICALS AND CHEMICAL PRODUCTS FOR WHICH U.S. PRODUCTION AND/OR SALES WERE EITHER REPORTED OR ESTIMATED, IDENTIFIED BY MANUFACTURER, 1976--CONTINUED

MISCELLANEOUS END-USE CHEMICALS AND CHEMICAL PRODUCTS	MANUFACTURERS IDENTIFICATION CODES (ACCORDING TO LIST IN TABLE 3)
③CHELATING AGENTS, NITRILACIDS AND SALTS--CONTINUED	
③(ETHYLENEDINITRILLO)TETRAACETIC ACID, TETRASODIUM SALT	CGY(E), CRT, DAN, DOM, HMP, JOR, RPC.
③(ETHYLENEDINITRILLO)TETRAACETIC ACID, TRISODIUM SALT--	HMF.
③(N-HYDROXYETHYLETHYLENEDINITRILLO) TRIACETIC ACID	HMF.
③(N-HYDROXYETHYLETHYLENEDINITRILLO) TRIACETIC ACID, IRON SALT	HMF.
③(N-HYDROXYETHYLETHYLENEDINITRILLO) TRIACETIC ACID, MAGNE SIUM SALT	HMP.
③(N-HYDROXYETHYLETHYLENEDINITRILLO) TRIACETIC ACID, TRISO DIUM SALT	CRT, DAN, DOM, HMP, RPC.
③IMINOACETIC ACID, DISODIUM SALT	HMF.
③NITRILOTRIACETIC ACID	HMP, MON.
③NITRILOTRIACETIC ACID, DISODIUM SALT	HMP.
③NITRILOTRIACETIC ACID, TRISODIUM SALT	HMP.
③CHELATING AGENTS, NITRILACIDS AND SALTS, ALL OTHER--	CGY(E), DOM.
CHEMICAL INDICATORS	EM, FIN, GFS, MLC.
CHEMICAL REAGENTS	EM, GFS, BSA, UCC.
③ENZYMES:	
HYDROLYTIC ENZYMES:	
AMYLASES:	
AMYLASES, ALL OTHER--	BAX, MLS, PPZ, RH, X.
PROTEASES:	
BROMELAIN--	DOL.
FICIN--	PEZ.
PAPAIN--	PEH(E), PFZ.
PEPSIN--	CHH, PFZ, X.
RENNIN--	CHH, PFZ.
PROTEASES, ALL OTHER--	BAX, MLS, PFZ, PIC, PMP, X.
HYDROLYTIC ENZYMES INCLUDING PECTIC ENZYMES AND LIPA SE, ALL OTHER--	BAX, JFR, MLS, PFN, PMP, RH, WBC, X.
NON-HYDROLYTIC ENZYMES:	
GLUCOSE OXIDASE--	DLI.
NONHYDROLYTIC ENZYMES--	MLS, OMS, PLB.
③PLATATION REAGENTS:	
PHOSPHORODITHIOATES (DITHIOPHOSPHATES):	
DICRESYLPHOSPHODITHIOIC ACID	ACY.
DICRESYLPHOSPHODITHIOIC ACID, AMMONIUM SALT	ACY.
DICRESYLPHOSPHODITHIOIC ACID, SODIUM SALT	KCU.

TABLE 2.--MISCELLANEOUS END-USE CHEMICALS AND CHEMICAL PRODUCTS FOR WHICH U.S. PRODUCTION AND/OR SALES WERE EITHER REPORTED OR ESTIMATED, IDENTIFIED BY MANUFACTURER, 1976--CONTINUED

MISCELLANEOUS END-USE CHEMICALS AND CHEMICAL PRODUCTS	MANUFACTURERS IDENTIFICATION CODES (ACCORDING TO LIST IN TABLE 3)
③ FLOTATION REAGENTS--CONTINUED	
OTHER FLOTATION REAGENTS:	
2,2'-DIMETHYLTHIOCARBANILIDE (DI-ORTHO-TOLYLTHIOUR EA)	
NOKES BEAGENT	RBC.
ROSIN AMINES	KCU.
THIOCARBANILIDE	HFC.
	ACY.
③ GASOLINE ADDITIVES:	
N-SEC-BUTYL-N-PHENYLPHENYLENEDIAMINE	X.
4,4'-DI-SEC-BUTYLAMINODIPHENYL METHANE	X.
2,6-DI-TERT-BUTYL-ALPHA-DIMETHYLAMINO-PARA-CRESOL	TNA.
2,6-DI-TERT-BUTYLPHENOL	TNA.
N,N'-DI-SEC-BUTYL-FARA-PHENYLENEDIAMINE	DUP, USR, X.
2,6-DIETHYLANILINE	TNA(E).
N,N'-DIISOPROPYL-FARA-PHENYLENEDIAMINE	DUP, USR, X.
N,N'-DISALICYLIDENE-1,2-PROPANEDIAMINE	DUP, PER, TX, X.
ETHYLENE DIBBOHIDE	DOM, PPG, TNA.
METHYLCYCLOPENTADIENYMANGANESE TRICARBONYL	TNA.
METHYLENE-BRIDGED POLYALKAL PHENOLS	TNA.
4,4'-METHYLENEBIS(2,6-DI-TERT-BUTYLPHENOL)	TNA.
TETRAETHYL LEAD	DUP, PPG, TNA.
TETRAMETHYL-ETHYL LEAD, (TEL-TML, REACTED)	DUP, TNA.
TETRAMETHYLEAD	MLC, TNA(E).
1,3,5-TRIS(3,5-DI-TERT-BUTYL-6-HYDROXYBENZYL) MESITYLEN E	TNA.
③ GASOLINE ADDITIVES: ALL OTHER--	ASH, GLY, TNA, UPM, X.
③ LUBRICATING OIL AND GREASE ADDITIVES:	
CHLOROSULFURIZED AND SULFURIZED COMPOUNDS: USED AS L	
LUBRICATING OIL AND GREASE ADDITIVES:	
CHLOROSULFURIZED AND SULFURIZED COMPOUNDS: USED AS L	
LUBRICATING OIL AND GREASE ADDITIVES, ALL OTHER--	GLY.
OIL-SOLUBLE PETROLEUM SULFONATES:	
OIL-SOLUBLE PETROLEUM SULFONATE, AMMONIUM SALT	NLI.
OIL-SOLUBLE PETROLEUM SULFONATE, BARIUM SALT	PAR, WTC, X.
OIL-SOLUBLE PETROLEUM SULFONATE, CALCIUM SALT	ENS(E), ORG, PAR, PLC, TX, WTC, X.
OIL-SOLUBLE PETROLEUM SULFONATE, MAGNESIUM SALT	WTC.
OIL-SOLUBLE PETROLEUM SULFONATE, SODIUM SALT	ENS(E), MOR, PAR, SHC, SOC, MTC, X.
OIL-SOLUBLE PETROLEUM SULFONATE, ALL OTHER	SHC.

TABLE 2.--MISCELLANEOUS END-USE CHEMICALS AND CHEMICAL PRODUCTS FOR WHICH U.S. PRODUCTION AND/OR SALES WERE EITHER REPORTED OR ESTIMATED, IDENTIFIED BY MANUFACTURER, 1976--CONTINUED

PHOTOGRAPHIC CHEMICALS:	
2-(4-AMINO-N-ETHYL-BETA-TOLUIDINO) ETHYL METHANE-SULFONAMIDE	X.
2-(4-AMINO-N-ETHYL-META-TOLUIDINO) ETHYL SULFATE	X.
3-AMINO-1,2,4-TRIAZOLE	PMT.
BENZOTRIAZOLE	PMT.
CATECHOL	CRZ.
3-CHLORO-4-DIETHYLAMINO BENZENE DIAZONIUM CHLORIDE (PARA-DIAZO-2-CHLORO-N-DIETHYL ANILINE)	ESA, PMT.
4-DIAZO-3,5-DIETHOXYTHIORESOL SALTS	PMT.
2,5-DIETHOXY-4-MORPHOLINO BENZENE DIAZONIUM CHLORIDE	ALL, ESA.
P-DIETHYLAMINO BENZENE DIAZONIUM CHLORIDE (P-DIAZO-N,N-DIETHYL ANILINE)-ZINC CHLORIDE	ESA, PMT, WAY.
N,N-DIETHYL-P-PHENYLENEDIAMINE HYDROCHLORIDE	EKT.
N,N-DIETHYLOLENE-2,5-DIAMINE, MONOHYDROCHLORIDE	EKT, WAY.
P-DIETHYLAMINO BENZENE DIAZONIUM CHLORIDE (P-DIAZO-N,N-DIETHYL ANILINE)-ZINC CHLORIDE	ESA, PMT.
PARA-DIPHENYLAMINE DIAZONIUM SULFATE	PMT.
PARA-(N-ETHYLENEDIAMINO) BENZENE DIAZONIUM CHLORIDE (PA-BA-DIAZO-N-BENYL-N-ETHYL ANILINE)-ZINC CHLORIDE	PMT.
PARA-ETHYL(2-HYDROXYETHYL) AMINO BENZENE DIAZONIUM CHLORIDE (PARA-DIAZO-N-ETHYL-N-HYDROXYETHYL ANILINE)-ZINC CHLORIDE	ESA, PMT, WAY.
N-ETHYL-N-HYDROXYETHYL-PARA-PHENYLENEDIAMINE SULFATE	WAY.
HYDROQUINONE	EKT.
PARA-(2-HYDROXYETHYL) METHYLAMINO BENZENE DIAZONIUM CHLORIDE (PARA-DIAZO-N-HYDROXYETHYL-N-METHYL ANILINE)-ZINC CHLORIDE	ESA, PMT.
4-METHOXY-1-NAPHTHOL	X.
PARA-METHYLAMINOPHENOL SULFATE	EA.
5-METHYLBENZOTRIAZOLE	EA, PMT.
6-NITROBENZOTRIAZOLE	PMT.
PHENYL-5-MERCAPTOBENZOTRAZOLE	CGY(E).
1-PHENYL-3-PYRAZOLIDONE	X.
1-(2,4,6-TRICHLOROPHENYL)-3-PARA-NITROANILINO-2-PYRAZOLIN-5-ONE	EA, ESA, FIN, PMT, HST, MEL, WAY, X, Y.
PHOTOGRAPHIC CHEMICALS, ALL OTHER-	X.

TABLE 2.--MISCELLANEOUS END-USE CHEMICALS AND CHEMICAL PRODUCTS FOR WHICH U.S. PRODUCTION AND/OR SALES WERE EITHER REPORTED OR ESTIMATED, IDENTIFIED BY MANUFACTURER, 1976--CONTINUED

MISCELLANEOUS END-USE CHEMICALS AND CHEMICAL PRODUCTS	MANUFACTURERS IDENTIFICATION CODES (ACCORDING TO LIST IN TABLE 3)
@POLYMERS FOR FIBERS:	
CELLULOSE ACETATE-	CEL, DUP, EKT.
NYLON 6 (POLYMER FOR FIBER, ONLY)	
NYLON 6/6-	ALP, FRP.
@POLYACRYLONITRILE AND ACRYLONITRILE COPOLYMERS	DUP, FND, MON.
@POLYETHYLENE TEREPHTHALATE	DUP, MON.
@FOLIERS FOR FIBERS, ALL OTHER	DUP, EK, EKT, FND, GYR.
@POLYMERS, WATER SOLUBLE:	BKL, DUP, EK, EKT, FRP, MON, SRP.
@CELLULOSE ETHERS AND ESTERS:	
HYDROXYETHYLCELLULOSE-	UCC.
METHYLCELLULOSE-	DOM.
SODIUM CARBOXYMETHYLCELLULOSE (100%)	BUK, FMP.
CELLULOSE ETHERS AND ESTERS, ALL OTHER	DOM.
DEXTRAN-	PHR.
@POLYACRYLAMIDE	ACY, CEL(E), DOM, HFC, MRK, NLC.
@POLYACRYLIC ACID SALTS:	
AMMONIUM POLYACRYLATE-	BFG.
@SODIUM POLYACRYLATE-	ALC, BPG, DA, NLC, RH, STC.
@POLYACRYLIC ACID SALTS, ALL OTHER	ACY, BPG, NLC.
POLYETHYLENIMINE-	DOM.
POLYMETHACRYLIC ACID, SODIUM SALT-	GRD, NLC.
1-VINYL-2-PYRROLIDINONE, POLYMERS-	DAN, GAP.
@POLYMERS, WATER SOLUBLE, ALL OTHER	GAP.
RARE SUGARS:	
RARE SUGARS-	PFN.
SILICONE GREASES	DCC, SPD, SWS.
TANNING MATERIALS, SYNTHETIC:	
HYDROXYTOLUENESULFONIC ACID, FORMALDEHYDE CONDENSATE	
(CESOL-PERMALEDEHYDE SULFONATE), SODIUM SALT	DA.
1-NAPHTHALENESULFONIC ACID, FORMALDEHYDE CONDENSATE AND SALT	DA.
2-NAPHTHALENESULFONIC ACID, FORMALDEHYDE CONDENSATE AND SALT-	
1-PHENOL-2-SULFONIC ACID, FORMALLEHYDE CONDENSATE (PH ENOL-FORMALDEHYDE, SULFONATED)	AKS, GRD, RH.
TANNING MATERIALS, SYNTHETIC, ALL OTHER-	RH.
	CGY(B), DA, HIL, UCC.

MISCELLANEOUS END-USE CHEMICALS AND CHEMICAL PRODUCTS	MANUFACTURERS IDENTIFICATION CODES (ACCORDING TO LIST IN TABLE 3)
TEXTILE CHEMICALS, OTHER THAN SURFACE-ACTIVE AGENTS:	
DIMETHYLDIETHYLENE UREA	CHP, DAN.
2, 2', 4, 4'-TETRAHYDROBENZOPHENONE	GAP.
TRIS(BENZOYL METHYL) TRIMPHOXYMETHYLAMINE	DUP.
TEXTILE CHEMICALS, OTHER THAN SURFACE ACTIVE AGENTS, A	
ALL OTHERS	DAN, GAP, HDG.
UREA, BY END-USE MARKETS:	
UREA, PRIMARY SOLUTION (REPORT ON 100% UREA-CONTENT BASIS)	ACN, ACS, AGY(E), AGY, AKL, APD, ARM, BIC, BOR, CFA, CEN, CUC, COL, DUP, PCA, PTX, GPI, HKY, HN, HPC, JDC, RSC, OHC, PLC, PPC, SAG, SMP, SNI, SOH, TER, VLN, WLC, WYC.
UREA IN COMPOUNDS OR MIXTURES (100% BASIS):	
UREA IN FEED COMPOUNDS	ACN, AGY, APD, BIC, PMS, PTX, JDC, MSC, PPC, SNI, SOH, TER, VLN, WYC.
UREA IN LIQUID FERTILIZER	ACN, AGY, AKL, APD, ARM, CFA, CHN, CMC, PCA, PMS, PTX, GPI, HKY, HN, HPC, JDC, MSC, PLC, PPC, SAG, SMP, SNI, SOH, TER, VLN, WLC, WYC.
UREA LIQUOR	TEF.
UREA IN PLASTICS	ACS, PMS, MSC, OMC, SOH.
UREA IN SOLID FERTILIZER	ACN, ACS, AGY, APD, BIC, CFA, COL, PMS, PTX, HN, HPC, JDC, MSC, OMC, PPC, SNI, SOH, TER, VLN, WLC, WYC.
UREA IN COMPOUNDS AND MIXTURES (100% BASIS), ALL OTHERS	ACS, AGY(E), BOR, DUP, JDC, PPN, SOH, WYC.

TABLE 3.--MISCELLANEOUS END-USE CHEMICAL AND CHEMICAL PRODUCTS: DIRECTORY OF MANUFACTURERS, 1976

ALPHABETICAL DIRECTORY BY CODE

[Names of manufacturers that reported production or sales of miscellaneous end-use chemicals and chemical products to the U.S. International Trade Commission for 1976 are listed below in the order of their identification code as used in table 2]

Code	Name of company	Code	Name of company
ACN	Allied Chemical Corp.:	FRF	Firestone Tire & Rubber Co., Firestone Synthetic Fibers Co.
ACS	Agricultural Div.	GAF	GAF Corp., Chemical Div.
ACY	Specialty Chemicals Div.	GCC	W. R. Grace & Co., Agricultural Chem. Group
AGY	American Cyanamid Co.	GFS	C. Frederick Smith Chemical Co.
AIP	Agway, Inc., Olean Nitrogen Complex	GLY	Glyco Chemicals, Inc.
AKL	Air Products & Chemicals, Inc.	GPI	Goodpasture, Inc.
ALF	Gardiner Big River, Inc.	GRD	W. R. Grace & Co., Polymers & Chemicals Div.
ALL	Allied Chemical Corp., Fibers Div.	CYR	Goodyear Tire & Rubber Co.
ALM	Alliance Chemical, Inc.	HDC.	Hodag Chemical Corp.
ALX	Alox Corp.	HK	Hooker Chemicals & Plastic Corp.:
AMB	American Bio-Synthetic Corp.	HKD	Durez Div.
APD	Atlas Powder Co. Subsidiary of Tyler Corp.	HKY	Hawkeye Chemical Co.
ASH	Ashland Oil, Inc., Ashland Chemical Co.	HMP	W. R. Grace & Co., Organic Chemicals Div.
BAS	BASF Wyandotte Corp.	HN	Tenneco Chemicals, Inc.
BAX	Baxter Laboratories, Inc.	HPC	Hercules, Inc.
BFC	B. F. Goodrich Co., B. F. Goodrich Chemical Co. Div.	JDC	Nipak, Inc.
BIC	Baker Industries, Inc.	JFR	George A. Jeffrey's & Co., Inc.
BOR	Borden Co., Borden Chemical Div.	JOR	Jordan Chemical Co.
BUK	Buckeye Cellulose Corp.	KCU	Kennecott Copper Corp., Utah Copper Div.
CCA	Interstab Chemical, Inc.	MCI	Mooney Chemicals, Inc.
CCW	Cincinnati Milacron Chemicals, Inc.	MIL	Milliken & Co., Milliken Chemical Div.
CEL	Celanese Corp.:	MLS	Miles Laboratories, Inc., Marshall Div.
CFA	Celanese Fibers Co.	MON	Monsanto Co.
CGB	Cooperative Farm Chemicals Association	MOR	Marathon Morco, Co.
CHH	Ciba-Geigy Corp. and Pharmaceutical Div.	MRK	Merck & Co., Inc.
CHN	CHR. Hansen's Laboratory, Inc.	MSC	Mississippi Chemical Corp.
CNC	N-Ren Corp., Cherokee Nitrogen Div.	NEP	Nepera Chemical Co.
CRN	Columbia Nitrogen Corp.	NLC	Nalco Chemical Co.
CRT	CPC International, Inc., Amerchol	NTL	NL Industries, Inc.
	Crest Chemical Corp.	OMC	Olin Corp.
DA	Diamond Shamrock Corp.	OMS	E. R. Squibb & Sons, Inc.
DAN	Dan River, Inc.	ORO	Chevron Chemical Co.
DCC	Dow Corning Corp.	OXO	Oxochem Enterprises
DLI	Dawe's Laboratories, Inc.	PAR	Pennzoil Co., Penneco Div.
DOL	Castle & Cooke, Inc., Castle & Cooke Foods, Hawaii Region	PAS	Penwalt Corp.
DOW	Dow Chemical Co.	PD	Parke, Davis & Co. Sub of Warner-Lambert Co.
DUP	E. I. DuPont de Nemours & Co., Inc.	PEN	CPC International, Inc., S. B. Penick Div.
EK	Eastman Kodak Co.:	PFN	Pfanstiehl Laboratories, Inc.
EKT	Tennessee Eastman Co. Div.	PFZ	Pfizer, Inc. & Pfizer Pharmaceuticals, Inc.
ENJ	Exxon Chemical Co. U.S.A.	PHR	Pharmachem Corp.
ESA	East Shore Chemical Co., Inc.	PIC	Pierce Chemical, Inc.
FER	Ferro Corp.:	PLB	P-L Biochemicals, Inc.
	Ferro Chemical Div.	PLC	Phillips Petroleum Co.
	Keil Chemical Div.	PMP	Premier Malt Products, Inc.
FIN	Hexcel Corp., Fine Organics Div.	PPC	Premier Petrochemical Co.
	PMC Corp.:	PPG	Pittsburgh Plate Glass Co.
	Industrial Chemical Div.	RFC	Fike Chemicals, Inc.
FMP	First Mississippi Corp.	RH	Rohm & Haas Co.
FMS	Fairmount Chemical Co., Inc.	RPC	Millmaster Onyx Corp., Refined-Onyx Div.
FMT	Fairmount Chemical Co., Inc.		
FND	Fiber Industries, Inc.		

MISCELLANEOUS END-USE CHEMICALS AND CHEMICAL PRODUCTS

TABLE 3.--MISCELLANEOUS END-USE CHEMICAL AND CHEMICAL PRODUCTS: DIRECTORY OF MANUFACTURERS, 1976--CONTINUED

Code	Name of company	Code	Name of company
RSA	R.S.A. Corp.	TRI	Triad Chemicals
SAG	Swift Agricultural Chemicals	TRO	Troy Chemical Corp.
SHC	Shell Oil Co., Shell Chemical Co. Div.	TVA	Tennessee Valley Authority
SM	Mobil Oil Corp., Chemical Co.: Chemical Coatings Div.	TX	Texaco, Inc.
SMP	J.R. Simplot Co., Minerals & Chemical Div.	UPM	UOP, Inc.
SNI	Kaiser Aluminum & Chemical Corp., Kaiser Agricultural Chemicals Div.	USR	Uniroyal, Inc., Chemical Div.
SOC	Standard Oil Co. of California, Chevron Chemical Co.	VLN	Valley Nitrogen Producers, Inc.
SOH	Vistron Corp.	VND	Van Dyk & Co., Inc.
SPD	General Electric Co., Silicone Products Dept.	WAG	West Agro Chemical, Inc.
SW	Sherwin-Williams Co.	WAY	Phillip A. Hunt Chemical Corp., Organic Chemical Div.
SWS	Stauffer Chemical Co., SWS Silicones Div.	WBC	Worthington Biochemical Corp.
ICC	Tanatex Chemical Corp.	WBG	White & Bagley Co.
TER	Terra Chemicals International, Inc.	WLC	Agrico Chemical Co.
TNA	Ethyl Corp.	WMP	Essex Group, Inc.
		WTC	Witco Chemical Co., Inc.
		WTH	Union Camp Corp., Chemical Div., Dover Plant
		WYC	Wycon Chemical Co.
		ZCL	Carolina Processing Corp.

Note.--Complete names and addresses of the above reporting companies are listed in Table 1 of the Appendix.

MISCELLANEOUS CYCLIC AND ACYCLIC CHEMICALS

K. James O'Connor, Jr. and Thomas O'Connell

This section is extensively revised from that of previous years. Many of these changes reflect suggestions proposed by an industry task force. For this reason, the data contained within this section are not generally comparable with the data from previous years. Several large volume items such as urea and polymers for fiber were moved to the section entitled Miscellaneous End-Use Chemicals and Chemical Products.

The term miscellaneous chemicals as it is used here comprises those synthetic organic products that are not included in the use groups covered by the other sections of this report. They include products that are employed in a great variety of uses. The number of chemicals used extensively for only one purpose is not large. Among the products covered are those used for refrigerants, aerosols, solvents, and a wide range of chemical intermediates.

U.S. production of miscellaneous cyclic and acyclic chemicals in 1976 amounted to 83.5 billion pounds. U.S. sales for 1976 totaled 33.9 billion pounds valued at \$7.1 billion. Production of miscellaneous cyclic chemicals comprised only 5 percent of this section's total production.

The most important group among the miscellaneous acyclic chemicals was the halogenated hydrocarbons. U.S. production for this group in 1976 reached 20.8 billion pounds or 25 percent of this section's total production. U.S. sales for this group amounted to 8.8 billion pounds valued at \$1.4 billion. Other important groups were the monohydric unsubstituted alcohols with production of 14.3 billion pounds, the aldehydes with a total production of 8.3 billion pounds, and the nitrogenous compounds with production of 7.6 billion pounds.

MISCELLANEOUS CYCLIC AND ACYCLIC CHEMICALS

TABLE 1.--MISCELLANEOUS CYCLIC AND ACYCLIC CHEMICALS: U.S. PRODUCTION AND SALES, 1976

[Listed below are all miscellaneous chemicals for which any reported data on production or sales may be published. (Leaders (...)) are used where the reported data are accepted in confidence and may not be published or where no data were reported.] Table 2 lists all miscellaneous chemicals for which data on production and/or sales were reported and identifies the manufacturers of each]

MISCELLANEOUS CYCLIC AND ACYCLIC CHEMICALS	PRODUCTION		SALES	
	QUANTITY	VALUE	QUANTITY	UNIT VALUE ¹
	1,000 pounds	1,000 dollars	1,000 pounds	Per pound
Grand total-----	83,553,062	33,911,741	7,136,673	\$0.20
MISCELLANEOUS CHEMICALS, CYCLIC				
Total-----	3,881,178	1,803,010	682,150	.38
Benzoic acid, sodium salt-----	14,197	12,727	6,444	.51
Benzoyl peroxide-----	3,841	8,536	15,005	1.76

MISCELLANEOUS CYCLIC AND ACYCLIC CHEMICALS

TABLE 1.--MISCELLANEOUS CYCLIC AND ACYCLIC CHEMICALS: U.S. PRODUCTION AND SALES, 1976--CONTINUED

MISCELLANEOUS CYCLIC AND ACYCLIC CHEMICALS	PRODUCTION	SALES		
		QUANTITY	VALUE	UNIT VALUE ¹
MISCELLANEOUS CHEMICALS, ACYCLIC--Continued				
Halogenated Hydrocarbons--Continued	tons	pounds	dollars	Per pound
Tetrachloroethylene (Perchloroethylene)-----	668,930	572,470	83,347	\$0.15
1,1,1-Trichloroethane (Methyl chloroform)-----	631,255	614,863	113,769	.19
Trichloroethylene-----	315,496	298,476	46,042	.15
Vinyl chloride, monomer (Chloroethylene)-----	5,676,895	3,113,464	314,842	.10
All other halogenated hydrocarbons-----	1,575,873	248,061	138,044	.56
<i>All Other Miscellaneous Acyclic Chemicals</i>				
Total-----	8,988,137	2,116,581	640,412	.30
2-Butanone peroxide-----	6,350	6,157	6,515	1.06
tert-Butyl peroxide (Di-tert-butyl peroxide)-----	2,669	2,526	2,394	.95
Carbon disulfide-----	507,926	394,205	26,529	.07
Epoxides, ethers, and acetals, total-----	6,600,816	1,425,049	321,768	.23
Ethylene oxide-----	4,184,258	439,443	111,663	.25
Propylene oxide-----	1,823,222
All other epoxides, ethers, and acetals-----	593,336	985,606	210,105	.21
Organo-silicon compounds, total-----	188,272	107,722	160,930	1.49
Phosgene (Carbonyl chloride)-----	814,302
Sodium methoxide (Sodium methylate)-----	13,997	14,745	5,753	.39
All other-----	853,805	164,177	116,523	.71

¹ Calculated from rounded figures.

² Quantities are given on the basis of solid naphthenate, tallate, or linoleate content.

³ Statistics exclude production and sales of fatty amines. Statistics on fatty amines are given with "Surface-Active Agents."

⁴ Statistics exclude production and sales of potassium and sodium stearates. Statistics on these stearates are included with "Surface-Active Agents."

⁵ Statistics on production of ethyl alcohol from natural sources by fermentation are issued by the Department of the Treasury, Bureau of Alcohol, Tobacco, and Firearms.

⁶ Greater than 10 percent of this total is data which were estimated. It was necessary to estimate these data because one or more manufacturers of the compounds failed to supply the U.S. International Trade Commission with their data in sufficient time for its inclusion in this report. Such manufacturers are presumed to have continued production of the compound in question in 1977, therefore the volume of production and sales has been estimated by the USITC staff members.

⁷ Some polyols which are used as intermediates for urethanes have been included with "Plastics and Resin Materials."

TABLE 2.--MISCELLANEOUS CYCLIC AND ACYCLIC CHEMICALS FOR WHICH U.S. PRODUCTION AND/OR SALES WERE EITHER REPORTED OR ESTIMATED, IDENTIFIED BY MANUFACTURER, 1976

(CHEMICALS FOR WHICH SEPARATE STATISTICS ARE GIVEN IN TABLE 1 ARE MARKED BELOW WITH A "ø"; CHEMICALS NOT SO MARKED DO NOT APPEAR IN TABLE 1 BECAUSE THE REPORTED DATA ARE ACCEPTED IN CONFIDENCE AND MAY NOT BE PUBLISHED.)

MANUFACTURERS' IDENTIFICATION CODES SHOWN BELOW ARE TAKEN FROM TABLE 3. AN "X" SIGNIFIES THAT THE MANUFACTURER DID NOT CONSENT TO HIS IDENTIFICATION WITH THE DESIGNATED PRODUCT. COMPANY IDENTIFICATION CODES WHICH ARE FOLLOWED BY AN "EB" ARE SO LABELED BECAUSE THE COMPANY FAILED TO SUPPLY THE U. S. INTERNATIONAL TRADE COMMISSION WITH THEIR DATA IN SUFFICIENT TIME FOR ITS INCLUSION IN THIS REPORT. THE COMPANY IS PRESUMED TO HAVE CONTINUED PRODUCTION OF THE COMPOUND IN QUESTION IN 1976 AND THE VOLUME OF PRODUCTION AND SALES HAS BEEN ESTIMATED BY THE USITC STAFF MEMBERS)

MISCELLANEOUS CHEMICALS	MANUFACTURERS' IDENTIFICATION CODES (ACCORDING TO LIST IN TABLE 3)
----	----
MISCELLANEOUS CHEMICALS, CYCLIC:	
6-ACETOXY-2,4-DIMETHYL-1,3-DIOXANE	GIV.

PARA-HYDROXYBENZOIC ACID, ETHYL ESTER		HN.
@PARA-HYDROXYBENZOIC ACID, METHYL ESTER		ARS, HN, LEP.
@PARA-HYDROXYBENZOIC ACID, PROPYL ESTER		ARS, HN, LEM.
2-HYDROXY-4-METHOXYBENZOPHENONE--		ACY, GAZ, GLY.
2-HYDROXY-4-METHOXY-5-SULFOBENZOPHENONE TRIHYDRATE		ACY.
2-(2-HYDROXY-5-TERT-OCTYLPHENYL) BENZOTRIAZOLE		ACY.
ISOPROPYL-ORTHO-CRESOLS--		CP, UCC.
LACTONES:		
BUTYROLACTONE--		GAZ.
GLUCONO-DELTA-LACTONE--		PPZ.
@MALEIC ANHYDRIDE		HN, RPT, MON, PTT, RCI, USS.
PARA-MENTHANE--		HPC.
6-PARA-METHYL HYDROPEROXIDE		HPC.
PARA-METHOXYBENZYLIDENEALONIC ACID, DIETHYL AND DIMET HYL ESTERS--		ACY.
PARA-METHOXYBENZYLIDENEALONIC ACID, DIETHYL ESTER--		ACY.
5-METHOXYPHENOL--		ARS, ASL, EKT.
2,2'-BETHYLENEBIS*4-CHLOROPHENOL*		GIV.
2,2'-BETHYLENEBIS*3,4,6-TRICHLOROPHENOL* (PHENYL)		(HEXACHLORO : GIV.
METHYL GALLATE		HSH.
4-METHYLMORPHOLINE		JCC, UCC.
1-METHYL-2-PYRROLIDONE, MONOMER		GAZ.
MIXTURE OF PARA- AND ORTHO-AMYL DIMETHYLAMINO BENZOATE		EVN, VND.

TABLE 2.--MISCELLANEOUS CYCLIC AND ACYCLIC CHEMICALS FOR WHICH U.S. PRODUCTION AND/OR SALES WERE EITHER REPORTED OR ESTIMATED, IDENTIFIED BY MANUFACTURER, 1976--CONTINUED

MISCELLANEOUS CHEMICALS	MANUFACTURERS' IDENTIFICATION CODES (ACCORDING TO LIST IN TABLE 3)
MISCELLANEOUS CHEMICALS, CYCLIC--CONTINUED	
MORPHOLINE	DOM, JCC, UCC.
MORPHOLINE SALT OF PARA-TOLUENE SULFONIC ACID	AMB.
PENTHIAZINE	WAG.
2-PHENOXYETHANOL (ETHYLENE GLYCOL MONOPHENYL ETHER)	DOM, TCH.
2-(2-PHENOXYETHOXY)ETHANOL (DIETHYLENE GLYCOL PHENYL ETHER)	DOM.
PHENYL MERCURIC BORATE	TRO.
PHOSPHORIC ACID, LEAD SALT, (DIBASIC)	NTL.
PICRAMIC ACID, SODIUM SALT	SDC.
@ALPHA-PINENE	ARZ, CBY, NCI.
@BETA-PINENE	ARZ, CBY, HFC, NCI.
PINENE SULFATE	HFC.
PINENE, WOOD	HFC.
POLY-4-(2-ACRYLOXYETHOXY)-2-HYDROXY BENZOPHENONE	ACI.
PROPYL GALLATE	EKI, HSH.
PYROGALLOL	HSH, WAL.
2-PYRROLIDONE (2-PYRROLIDINONE)	HRK.
RESORCINOL MONOBENZOATE	EKI.
ROSIN ACID SALTS:	
CALCIUM RESINATE	CBY.
CALCIUM ZINC RESINATE	CBY.
ROSIN ACID SALTS, ALL OTHER	HFC.
SALICYLANILIDE	FCW.
SALICYLIC ACID, LEAD SALT	NTL.
STYRENE OXIDE	UCC.
SUCCINIC ANHYDRIDE	ACS, ORO.
TALL OIL, CHEMICALLY MODIFIED	FOC, X.
TALL OIL SALTS (LIMOLEIC-ROSIN ACID SALTS):	
CALCIUM MANGANESE TALLATE	NCI.
COBALT TALLATE	CCA, HN, MCI.
LEAD MANGANESE TALLATE	CCA, HN, MCI, SHP.
LEAD TALLATE	NCI.
MANGANESE TALLATE	CCA, HN, MCI.
TRI(OXYALUMINUM ISOPROPOXIDE)	HN, MCI.
TRI(OXYALUMINUM TALLATE)	KCH.

TABLE 2.--MISCELLANEOUS CYCLIC AND ACYCLIC CHEMICALS FOR WHICH U.S. PRODUCTION AND/OR SALES WERE EITHER REPORTED OR ESTIMATED, IDENTIFIED BY MANUFACTURER, 1976--CONTINUED

MISCELLANEOUS CHEMICALS		MANUFACTURERS' IDENTIFICATION CODES (ACCORDING TO LIST IN TABLE 3)
MISCELLANEOUS CHEMICALS, CYCLIC--CONTINUED		
TAIL OIL SALTS (LINOLEIC-ROSIN ACID SALTS)--CONTINUED		
ZINC TALLATE	(LINOLEIC-ROSIN ACID SALTS)	NCI.
TAIL OIL SALTS, ALL OTHER		
TANNIC ACID, TECHNICAL		ZGL.
TANNIC ACID, U.S.P.		HSH.
TERPINE HYDROCARBONS, MONOCYCLIC (SOLVENOL)		HSH, HAL.
TETRAIS(METHYLENE-3-(3',5'-DI-TERT-BUTYL-4'-HYDROXYPHENYL)PROPIONATE) METHANE		GLD, NCI.
2,3,5,6-TETRACHLORO-4-(METHYLSULFONYL) PYRIDINE		EK.
1,2,3,4-TETRAHYDRONAPHTHALENE		DOM.
TETRAHYDROTHIOPHENE		DUF.
1,3,6,8-TETRAITROCARBAZOLE		PAS.
TETRAPHENYLAMINE		SDC.
TETRAPHENYLAMINE CHLORIDE		X.
TETRAPHENYLAMINE HYDROXIDE		X.
2,2'-THIOBIS(4-OCTYLPHENOLATE)-NORMAL-BUTYLAMINE NIC		X.
THIOPHENE		ACY.
TRIALLYL CYANURATE		PAS.
3,4,4'-TRICHLOROCARBANILIDE		ACY.
1,3,5-TRICHLORO-S-TRIAZINE-2,4,6-(1H,3H,5H)TRIONE (TRI-CHLOROSYANURIC ACID)		NON.
1,2,3-TRIKETOHYDRIENE HYDRATE		NON.
3,5,5'-TRIMETHYL-2-CYCLOHEXENE-1-ONE		PIC.
2,4,6-TRIMITRESCINGOLIN AND LEAD DERIVATIVE		GCC, HSC.
TRIOXANE		REM.
TRIPHENYL PHOSPHITE		HSC.
1-VINYL-2-PYRROLIDINONE, MONOMER		GCC, HON, HSC.
1-VINYL-2-PYRROLIDINONE-OTHER COPOLYMERS		GAF.
1-VINYL-2-PYRROLIDINONE-VINYL ACETATE COPOLYMER		GAF, UCC.

CALCIUM GLUCOHEPTANOATE		PFN.
SODIUM GLUCOHEPTANOATE		HMP, PFN.
GLUCONIC ACID SALTS:		
SODIUM GLUCONATE		GPR(E), PFZ, SFI.
HUMIC ACIDS, SODIUM SALTS		NLC.
ISOASCORBIC ACID, SODIUM SALT (SODIUM ERYTHORATE)		MRK, PFZ.
LACTIC ACID SALTS:		
SODIUM LACTATE		HAL, PFN.
LANOLIN ACID, BARIUM SALT		CFR.
LAURIC ACID SALTS:		
LAURIC ACID, BARIUM-CADMIUM SALT		X.
LAURIC ACID SALTS, ALL OTHER		UCC, X.
LINOLEIC ACID SALTS:		
CALCIUM LINOLEATE		CCA, SHP.
LEAD LINOLEATE		SHP.
MANGANESE LINOLEATE		SHP.
@MALEIC ACID SALTS:		
MALEIC ACID, DIBUTYLITIN SALT		X.
MALEIC ACID, TRIBASIC LEAD SALT		NLI.
MALEIC ACID SALTS, ALL OTHER		MEI, WTL.

TABLE 2.--MISCELLANEOUS CYCLIC AND ACYCLIC CHEMICALS FOR WHICH U.S. PRODUCTION AND/OR SALES WERE EITHER REPORTED OR ESTIMATED, IDENTIFIED BY MANUFACTURER, 1976--CONTINUED

MISCELLANEOUS CHEMICALS	MANUFACTURERS' IDENTIFICATION CODES (ACCORDING TO LIST IN TABLE 3)
MERCAPTOACETIC ACID (THIOGLYCOLIC ACID) SALTS:	
AMMONIUM MERCAPTOACETATE	CCA, EVN.
CALCIUM MERCAPTOACETATE	CCA, EVN.
POTASSIUM MERCAPTOACETATE	EVN.
SODIUM MERCAPTOACETATE	EVN.
MERCAPTOACETIC ACID (THIOGLYCOLIC ACID) SALTS, ALL OTHER--	CCA.
NEODECANOIC ACID SALTS:	
CADMIUM NEODECANOATE	BKL, CCA.
CALCIUM NEODECANOATE	CCA, MCI.
COBALT NEODECANOATE	MCI, SHP.
LEAD-COBALT NEODECANOATE	MCI.
LEAD NEODECANOATE	MCI.
LITHIUM NEODECANOATE	MCI.
MANGANESE NEODECANOATE	CCA, SHP.
ZINC NEODECANOATE	MCI.
ZIRCONIUM NEODECANOATE	MCI.
NEODECANOIC ACID SALTS, ALL OTHER--	CCA.
OCTANOIC-ACID (CAPRYLIC ACID) SALTS:	
ALUMINUM OCTANOATE	DA.
STANNOUS OCTANOATE	X.
OCTANOIC ACID (CAPRYLIC ACID) SALTS, ALL OTHER--	X.
OLEIC ACID SALTS:	
COPPER OLEATE	WTC.
LEAD OLEATE	MOC.
STANNOUS OLEATE	X.
OLEIC ACID SALTS, ALL OTHER--	HAL, SHP.
OXALIC ACID SALTS:	
AMMONIUM OXALATE	ACS.
FERRIC OXALATE	SHP.
POTASSIUM OXALATE	BKC.
SODIUM OXALATE	BKC.
PALMITIC ACID SALTS:	
ALUMINUM PALMITATE	DA.
PHOSPHORITHIOIC ACID SALTS (DITHIOPHOSPHATES):	
SODIUM DI-SEC-BUTYL PHOSPHORODITHIOATE	ACY.
SODIUM DI-SEC-BUTYL/DIETHYL PHOSPHORODITHIOATE	ACY.

TABLE 2.--MISCELLANEOUS CYCLIC AND ACYCLIC CHEMICALS FOR WHICH U.S. PRODUCTION AND/OR SALES WERE EITHER REPORTED OR ESTIMATED, IDENTIFIED BY MANUFACTURER, 1976--CONTINUED

MISCELLANEOUS CHEMICALS	MANUFACTURERS' IDENTIFICATION CODES (ACCORDING TO LIST IN TABLE 3)
PHOSPHORODITHIOIC ACID SALTS (DITHIOPHOSPHATES)--CON'T	
SODIUM DIETHYL PHOSPHORODITHIOATE	ACY.
SODIUM DIETHYL PHOSPHORODITHIOATE	ACY.
SODIUM DILSOPROPYL PHOSPHORODITHIOATE	ACY.
PHOSPHORODITHIOIC ACID SALTS (DITHIOPHOSPHATES), AL L OTHER	ACY.
PROPIONIC ACID SALTS:	
CALCIUM PROPIONATE	HPT, PFZ.
POLYFLUORALKYL THIOPROPIONIC ACID, LITHIUM SALT	DOF.
SODIUM PROPIONATE	HPT, PFZ.
PROPIONIC ACID SALTS, ALL OTHER	EW.
RICINOLEIC ACID SALTS:	
CALCIUM RICINOLEATE	NIL.
LITHIUM RICINOLEATE	NIL.
SODIUM ETHYLOXALACETATE	FMP(E).
SODIUM GLYCOLATE	SAL.
SODIUM SORBITOL BORATE	ICI.
STEARIC ACID SALTS:	
ALUMINUM STEARATES:	
ALUMINUM DISTEARATE	DA, NOC, PEN(E), SYP, WTC.
ALUMINUM MONOSTEARATE	DA, NOC, SYP, WTC.
ALUMINUM TRISTEARATE	DA, NOC, PEN(E), SYP, WTC.
AMMONIUM STEARATE	DA.
BARIUM STEARATE	DA, NOC, PEN(E), SYP, WTC.
CADMIUM STEARATE	SYP, WTC.
CALCIUM STEARATE	DA, FER, HN, MAL, NOC, PEN(E), SYP, WTC, X.
COBALT STEARATE	SHF, WTC, X.
FERRIC STEARATE	SHF, WTC.
LEAD STEARATE	NIL, WTC, X.
LITHIUM STEARATE	DA, NOC, PEN(E), WTC.
MAGNESIUM STEARATE	DA, MAL, NOC, PEN(E), SYP, WTC.
NICKEL STEARATE	WTC, HN, MAL, NOC, PEN(E), PLS, SYP, WTC, X.
ZINC STEARATE	NOC, NIL, SHW(B), WTC.
STEARIC ACID SALTS, ALL OTHER	
SUCCINIC ACID, SODIUM SALT	
TARTARIC ACID SALTS:	
ANTIMONY POTASSIUM TARTRATE	HSB, PFZ.

TABLE 2.--MISCELLANEOUS CYCLIC AND ACYCLIC CHEMICALS FOR WHICH U.S. PRODUCTION AND/OR SALES WERE EITHER REPORTED OR ESTIMATED, IDENTIFIED BY MANUFACTURER, 1976--CONTINUED

MISCELLANEOUS CHEMICALS	MANUFACTURERS' IDENTIFICATION CODES (ACCORDING TO LIST IN TABLE 3)
3TARTARIC ACID SALTS--CONTINUED	
POTASSIUM BITARTRATE - - - - -	ACY.
POTASSIUM SODIUM TARTRATE - - - - -	PFZ.
XANTHIC ACID SALTS:	
POTASSIUM AMYLXANTHATE - - - - -	DOM.
POTASSIUM ETHYLXANTHATE - - - - -	DOM.
POTASSIUM ISOPROPYLXANTHATE - - - - -	BAS.
POTASSIUM PENTYLXANTHATE - - - - -	ACY.
SODIUM NORMAL-BUTYLXANTHATE - - - - -	KCC.
SODIUM SEC-BUTYLXANTHATE - - - - -	DOM.
SODIUM ETHYLXANTHATE - - - - -	DOM.
SODIUM ISOBUTYLXANTHATE - - - - -	DOM.
SODIUM ISOPROPYLXANTHATE - - - - -	DOM.
XANTHIC ACID SALTS, ALL OTHER--	DOM.
SALTS OF ORGANIC ACIDS, ALL OTHER--	CCA, DA, HSH, MCI, NPI, TCH, UCC, UOP, WTC.
ALDEHYDES:	
ACETALDEHYDE - - - - -	CEL, EXX, PUB(E), SHC, UCC.
ACROLEIN - - - - -	SHC, UCC.
BUTYRALDEHYDE - - - - -	CEL, EXX, UCC.
CHLORAL - - - - -	DA, MTO.
CROTONALDEHYDE - - - - -	EKT.
2-ETHYL-BUTYRALDEHYDE - - - - -	UCC.
2-ETHYLHEXANAL (ALPHA-ETHYLALPHAALDEHYDE) - - - - -	EKY.
3-FORALDEHYDE (3/2 BY WEIGHT) - - - - -	AMP, BOR, CBD, CEL, DUP, GAF, GOC, GP, HKD, HN, HPC, HIC, MON, RCI, SKO, UCC.
GLUTARALDEHYDE - - - - -	UCC.
GLYOXAL - - - - -	UCC.
ISOBUTYRALDEHYDE - - - - -	ACY, UCC.
ISOPENTALDEHYDE, MIXED ISOMERS - - - - -	CEL, DEC, EXX, UCC.
METHACROLEIN - - - - -	RDA.
2-METHYLVALERALDEHYDE - - - - -	UCC.
PROPIONALDEHYDE - - - - -	EKY, UCC.
VALERALDEHYDE (PENTANAL) - - - - -	UCC.
ALDEHYDES, ACYCLIC, ALL OTHER--	EKT, UCC, X.
KETONES:	
ACETONE:	
ACETONE FROM CUMENE--	ACS, CLK, DOM, GE, GYR, MON, SOC, UCC, USS.

TABLE 2.--MISCELLANEOUS CYCLIC AND ACYCLIC CHEMICALS FOR WHICH U.S. PRODUCTION AND/OR SALES WERE EITHER REPORTED OR ESTIMATED, IDENTIFIED BY MANUFACTURER, 1976--CONTINUED

MISCELLANEOUS CHEMICALS	MANUFACTURERS' IDENTIFICATION CODES (ACCORDING TO LIST IN TABLE 3)
KETONES--CONTINUED	
ACETONE--CONTINUED	
ACETONE FROM ISOPROPYL	
ACETONE, ALL OTHER	DIX, EKT, ENJ(E), SHC, UCC.
ACETONE, CRUDE	OCC.
@2-BUTANONE	BAL.
CHLORO-2-PROPANONE	CEL, DIX, ENJ(E), SHC, UCC.
DIISOPROPYL KETONE	EK.
2-HEPTANONE	EKX
3-HEPTANONE	EKT
2,5-HEXANEDIONE (ACETONYLACETONE)	UCC.
@4-HYDROXY-4-METHYL-2-PENTANONE	ARS.
ISOVALERONE	CEL, SHC, UCC.
LACTIDE	UCC.
4-METHOXY-4-METHYL-2-PENTANONE	CLN.
5-METHYL-2-HEXANONE (METHYL ISOAMYL KETONE)	SHC.
@4-METHYL-2-PENTANONE	EKT
@4-METHYL-3-PENTEN-2-ONE	EKT, ENJ(E), SHC, UCC.
2-OCTANONE	ENJ(E), SHC, UCC.
2,4-PENTANEDIONE	WH.
3-PENTANONE	UCC.
PSUEDOIONONE	HEX, ORT, UCC.
KETONES, ALL OTHER	GLD, RDA.
ALCOHOLS, MONOHYDRIC, UNSUBSTITUTED:	HEX, ORT, UCC.
ALCOHOLS, C11 OR LOWER, UNMIXED (95% OR MORE PUBE):	ABB, ARC, MRR, SHC, UCC.
ALLYL ALCOHOL	
AMYL ALCOHOLS:	
1-PENTANOL	FPE, SHC.
2-METHYL-1-BUTANOL	UCC.
@BUTYL ALCOHOLS:	
@NORMAL-BUTYL ALCOHOL	CEL, CO, DBC, EKK, GAF, OXO, SHC, TNA (Z), UCC.
SEC-BUTYL ALCOHOL	ENJ(E), SHC.
TERT-BUTYL ALCOHOL	SHC, X.
@ISOBUTYL ALCOHOL	CEL, DBC, EKK, OXO, SHC, UCC.
1H, 1H-EICOSAFLUORO-1-UNDECANOL	DUP.
@ETHYL ALCOHOL, SYNTHETIC ONLY	EKK, ENJ(E), PUB(E), SHC, UCC, USI.
@2-ETHYL-1-HEXANOL	DBC, EKK, GLY, OXO, SHC, UCC.

TABLE 2.--MISCELLANEOUS CYCLIC AND ACYCLIC CHEMICALS FOR WHICH U.S. PRODUCTION AND/OR SALES WERE EITHER REPORTED OR ESTIMATED, IDENTIFIED BY MANUFACTURER, 1976--CONTINUED

MISCELLANEOUS CHEMICALS	MANUFACTURERS' IDENTIFICATION CODES (ACCORDING TO LIST IN TABLE 3)
@ALCOHOLS, MONOHYDRIC, UNSUBSTITUTED--CONTINUED	
ALCOHOLS, C11 OR LOWER, UNMIXED (95% OR MORE PURE)--	
CONTINUED	
2-ETHYL-4-METHYL-1-PENTANOL-	EKX, GLY.
NORMAL-HEPTYL ALCOHOL-	EKX.
NORMAL-HEXYL ALCOHOL	CO, ENJ(E), TNA(E), UCC.
ISO-OCTYL ALCOHOL-	ENJ(E), USS.
@ISOPROPYL ALCOHOL-	ATR, ENJ(E), SHC, UCC.
@METHANOL, SYNTHETIC ONLY	AIF, ATR(E), BOR, CEL, DUP, GLY, GP, GYR, HN, HPC, ICI, UCC(E), MON, RH, UCC.
2-METHYL-1-PENTANOL-	UCC.
1-OCTANOL-	CO.
2-OCTANOL-	WTH.
@PROYL ALCOHOL	CEL, EKX, UCC.
2-PROPYL-1-OL (PROPARGYL ALCOHOL)-	GAP.
@ALCOHOLS, UNMIXED C11 OR LOWER, ALL OTHER-	ENJ(E), SHC, UCC.
@ALCOHOLS C12 OR HIGHER, UNMIXED (95% OR MORE PURE):	
DODECYL ALCOHOL-	CO.
1-HEXADECANOL-	CO, FG.
HEXADODECYL ALCOHOL-	CO.
ISODECYL ALCOHOL	ENJ(E), USS.
ISOHEXADECANOL	ENJ(E).
1-OCTADECANOL-	CO, FG.
CIS-9-OCTADECEN-1-OL	ASH.
1-TETRADECANOL-	CO, UCC.
1-TRIDECANOL-	ENJ(E).
ALCOHOLS, UNMIXED C12 OR HIGHER, ALL OTHER	SCF.
@MIXTURES OF ALCOHOLS:	
ALCOHOL MIXTURES, ALL OTHER-	CO(E), CPS, EKX, ENJ(E), NCI, PG, PUB(E), SHC, TNA(E), UCC.
@ESTERS OF MONOHYDRIC ALCOHOLS:	
ACRYLIC MONOMERS, MIXED-	BH.
ALLYL METHACRYLATE	GLY, JCC, SAR(E).
AMYL ACETATES:	
AMYL ACETATE	UCC.
BUTYL ACETATES:	
@NORMAL-BUTYL ACETATE	CEL, EKT, PUB(E), UCC.
SECONDARY-BUTYL ACETATE-	PUB(E).
ISOBUTYL ACETATE	CEL, EKX, UCC.

TABLE 2.--MISCELLANEOUS CYCLIC AND ACYCLIC CHEMICALS FOR WHICH U.S. PRODUCTION AND/OR SALES WERE EITHER REPORTED OR ESTIMATED, IDENTIFIED BY MANUFACTURER, 1976--CONTINUED

2-2-(HEXYLOXY)ETHOXY*ETHANOL	UCC.
ISOBUTOXYETHANOL	UCC.
1-ISOBUTOXY-2-FRANANOL (PROYLENE GLYCOL ISOBUTYL ETHER)	DOM.
02-METHOXYETHANOL (ETHYLENE GLYCOL MONOMETHYL ETHER)	DOM, JCC, OMC, PPG, SHC, UCC.
02-(2-METHOXYETHOXY)ETHANOL (DIETHYLENE GLYCOL MONOMETHYL ETHER)	DOM, JCC, OMC, PPG, SHC, UCC.
02-2-(2-METHOXYETHOXY)ETHOXY*ETHANOL (TRIETHYLENE GLYCOL MONOMETHYL ETHER)	DOM, OMC, UCC.
2-(2-METHOXYETHOXY)ETHYL-2-METHOXYETHYL ETHER (TETRAETHYLENE GLYCOL DIMETHYL ETHER)	ASL, DUP, UCC.
METHOXYBOLYETHYLENE GLYCOL	DOM.
1-METHOXY-2-PROPANOL	DOM.
3-(3-METHOXYPROPOXY)PROPANOL	DOM, DUP.
3-8-3-(3-METHOXYPROPOXY)PROPOXY*PROPANOL	CEL, HN.
PARAFORMALDEHYDE	NLC.
POLYBUTYLENE GLYCOL	BAS, CAU, DA, DOM, DUP, HDG, JCC, OMC, TCH, UCC.
POLYETHYLENE GLYCOL	BAS, DA.
POLYPROPOXY ETHERS:	JCC, TRI, UCC.
POLYPROPOXYBUTYL ETHER	DOM, UCC.
POLYPROPOXY ETHERS, ALL OTHER	BAS, DOM, HDG, JCC, OMC, UCC.
POLYGLYCOLS, ETHYLENE GLYCOL AND GLYCOL ETHER, MIXED	DUP, OKG.
ED	BAS, DOM, JCC.
0POLYPROPYLENE GLYCOL	GLY, ICI, TCH.
POLYTETRAMETHYLENE GLYCOL ETHER	ICI.
PROPYLENE GLYCOL, MIXED ETHERS	DOM, EKK, OMC, UCC.
SORBITOL, ETHOXYLATED	RF.
SORBITOL, PROPYLATED	CEL, DO4, JCC, NWP, OMC, PPG, SHC, UCC.
0TETRAETHYLENE GLYCOL	DOM, HDG, UCC.
1,1,3,3-TETRAMETHOXYPROPANE	CEL, HDG, UCC.
TRIEHTYLENE GLYCOL	DOM, HDG, UCC.
TRIPROPYLENE GLYCOL	CEL, HDG, UCC.
POLYHYDRIC ALCOHOL ETHERS, ALL OTHER	CEL, HDG, UCC.

MISCELLANEOUS CYCLIC AND ACYCLIC CHEMICALS

TABLE 2.--MISCELLANEOUS CYCLIC AND ACYCLIC CHEMICALS FOR WHICH U. S. PRODUCTION AND/OR SALES WERE EITHER REPORTED OR ESTIMATED, IDENTIFIED BY MANUFACTURER, 1976--CONTINUED

	MANUFACTURERS' IDENTIFICATION CODES (ACCORDING TO LIST IN TABLE 3)
MISCELLANEOUS CHEMICALS	
③HALOGENATED HYDROCARBONS:	
BROMINATED (INCLUDING BROMOCHLORINATED) HYDROCARBONS	
BROMOCHLOROMETHANE	DOM.
1-BROMO-3-CHLOROPROPANE (TRIMETHYLENEDIBROMIDE)	VEL.
1-BROMO-2-BROMOETHANE	DOM, GTL, VEL.
1-BROMO-OCTADECANE	DUP, HNY.
1-BROMOPENTANE	HNY.
BROMOCHLOROMETHANE	VEL.
DIBROMOETHANE	DOM.
1,1,2,2-TETRABROMOETHANE	DOM.
BROMINATED (INCLUDING BROMOCHLORINATED) HYDROCARBONS, ALL OTHER	GTL, HNY, VEL.
CHLORINATED (NOT OTHERWISE HALOGENATED) HYDROCARBONS	
③CARBON TETRACHLORIDE	ACS, DA, DOM, DUP, FNB, PRO, SPI, TNA (E).
③CHLORINATED PARAFFINS (C10-C30):	
④CHLORINATED PARAFFINS, LESS THAN 5% CHLORINE	HK.
④CHLORINATED PARAFFINS, 35-64% CHLORINE	CCH, DA, DVC, FEB, ICI, NEV.
④CHLORINATED PARAFFINS, 65% OR MORE CHLORINE	DA, DVC, NEV.
1-CHLOROBUTANE	PG (E), UCC.
1-CHLOROETHANE (ETHYL CHLORIDE)	ARE, DOM, DUP, PPG, SHC, TNA (E).
③CHLOROFORM	ACS, DA, DOM, PRO, SPI.
③CHLOROMETHANE (METHYL CHLORIDE)	ACS, CO, DCC, DOM, DUP, SPI, TNA (E), UCC.
1-CHLORO-2-METHYL-2-BUTENE	ROA.
3-CHLORO-2-METHYL-1-PROPENE (METHALYL CHLORIDE)	PG (E).
3-CHLOROPROPENE	DOM, SHC.
2,2-DICHLOROACETYL CHLORIDE	ROA.
DICHLOROBUTADIENE	DUF.
1,4-DICHLOROBUTENE	DUP, PTT.
③1,2-DICHLOROETHANE (ETHYLENE DICHLORIDE)	ACS, ANE, BAS, BFG, CO, DA, DOM, PRO, ONC, PFG, SHC, TNA (E), UCC.
③DICHLOROMETHANE (METHYLENE CHLORIDE)	ACS, DA, DOM, PRO, SPI.
③1,2-DICHLOROPROPANE	BAS, DOM, JCC, ONC.
2,3-DICHLOROPROPENE	DOM.
1,1,2,2-TETRACHLOROETHANE (ACETYLENE TETRACHLORIDE)	HK.
③TETRACHLOROETHYLENE (PERCHLOROETHYLENE)	DA, DOM, DUP, PRO, HK, PFG, SPI, TNA (E).

TABLE 2.--MISCELLANEOUS CYCLIC AND ACYCLIC CHEMICALS FOR WHICH U.S. PRODUCTION AND/OR SALES WERE EITHER REPORTED OR ESTIMATED, IDENTIFIED BY MANUFACTURER, 1976--CONTINUED

MISCELLANEOUS CHEMICALS	MANUFACTURERS' IDENTIFICATION CODES (ACCORDING TO LIST IN TABLE 3)
@HALOGENATED HYDROCARBONS--CONTINUED	
@CHLORINATED (NOT OTHERWISE HALOGENATED) HYDROCARBONS--	
CONTINUED	
1,1,1-TRICHLOROETHANE (METHYL CHLOROFORM)--	DOW, FRO, PPG, TNA(E).
1,1,2-TRICHLOROETHANE--	DOW.
@TRICHLOROETHYLENE--	DA, DOW, HK, PPG, TNA(E).
1,2,3-TRICHLOROPROPANE	DOW, SHC.
1,2,3-TRICHLOROPROPENE	DOW.
@VINYL CHLORIDE, MONOMER	ACS, AME, BFG, CO, DOW, MNO, PEG, SHC, TNA(E).
VINYLDIENE CHLORIDE, MONOMER (1,1-DICHLOROETHYLENE)	DOW.
@CHLORINATED (NOT OTHERWISE HALOGENATED) HYDROCARBONS, ALL OTHER	DUP, TNA(E).
@FLUORINATED (INCLUDING OTHER FLUOROHALOGENATED)	
HYDROCARBONS:	
2-BROMO-2-CHLORO-1,1,1-TRIFLUOROETHANE	ICI.
BROMOTRIFLUOROMETHANE--	DUP.
1-CHLORO-1,1-DIFLUOROETHANE--	DUP, PAS.
@CHLORODIFLUOROMETHANE (P-22)	ACS, DUP, KAI, PAS, RCN, UCC.
CHLOROPENTAFLUOROETHANE--	DUP.
CHLOROTRIFLUOROETHYLENE--	ACS, HMM.
CHLOROTRIFLUOROMETHANE--	X.
1,2-DIBROMO-1,1,2,2-TETRAFLUOROETHANE	DUF.
@DICHLORODIFLUOROETHANE (P-12)	ACS, DUP, KAI, PAS, RCN, UCC.
DICHLOROTETRAFLUOROETHANE--	ACS, DUP, PAS.
1,1-DIFLUOROETHANE--	ACS, DUP.
DIFLUOROTETRACHLOROETHANE--	X.
HEXAFLUOROPROPYLENE--	DUP.
1-iodoperfluorohexane--	DUP.
TETRAFLUOROETHYLENE, MONOMER	ACS, DUP.
TETRAFLUOROMETHANE--	DUP.
@TRICHLOROFLUOROMETHANE (P-11)	ACS, DUP, KAI, PAS, RCN, UCC.
TRICHLOROTRIFLUOROETHANE	ACS, DUP.
VINYL FLUORIDE, MONOMER	X.
VINYLDIENE FLUORIDE, MONOMER	PAS, X.
@FLUORINATED (INCLUDING OTHER FLUOROHALOGENATED) HYDROCARBONS, ALL OTHER	DUP, ICI, PAS.
DIODOMETHANE--	FMT, NTB.

TABLE 2.--MISCELLANEOUS CYCLIC AND ACYCLIC CHEMICALS FOR WHICH U. S. PRODUCTION AND/OR SALES WERE EITHER REPORTED OR ESTIMATED,
IDENTIFIED BY MANUFACTURER, 1976--CONTINUED

	MANUFACTURERS' IDENTIFICATION CODES (ACCORDING TO LIST IN TABLE 3)
MISCELLANEOUS CHEMICALS	
IODINATED (NOT OTHERWISE HALOGENATED) HYDROCARBONS--	
CONTINUED	
IODOPHANE	PMT.
IODOPHM	MTB.
IODOPHNE	BSA.
OTHER MISCELLANEOUS ACYCLIC CHEMICALS:	
ACETYL PEROXIDE	WTL.
ALUMINUM ISOPROPOXIDE	CHT, KCH, WTC, WTL.
2-BUTANONE PEROXIDE	CAD, NOC, WTC, WTL.
TEBT-BUTYL HYDROPEROXIDE	CAD, RCI, WTC, WTL.
TEBT-BUTYL PEROXIDE	CAD, NOC, SHC, WTC, WTL.
@ TERT-BUTYL PEROXIDE	SYP(E).
CADMIUM BENZOATE	ACS, PMB, PAS, PPS, SFI.
@ CARBON DISULFIDE	UCC.
2-CHLOROETHANOL	WTC, WTL.
DECANOYL PEROXIDE	GTL, VEL.
2,3-DIBROMOPROPANOL	
2,5-DIMETHYL-2,5-BIS(2-ETHYL-1-HEXANOYL PEROXY) HEXA- NE	WTC.
2,5-DIMETHYL-2,5-DI(TERT-BUTYLOXY) HEXANE	WTL.
2,5-DIMETHYL-2,5-DI(TERT-BUTYLOXY) HEXANE-3	WTL.
@ EPOXIDES, ETHERS, AND ACETALS:	
1-(ALLYLOXY)-2,3-EPOXYPROPANE (ALLYL GLYCIDYL ETH- ER)	AAE.
BIS(2-CHLOROETHOXY)METHANE	IRL.
BIS(2-CHLOROETHYL)ETHER	DOW.
BIS(2-CHLORO-1-METHYLETHYL)ETHER (DICHLOROISOPROP- YL ETHER)	DOW.
BUTYLENE OXIDE	DOW.
BUTYL VINYL ETHER	GAF, PUB(E).
2-CHLOROETHYL VINYL ETHER	AAE.
CHLOROMETHYL METHYL ETHER	SH.
2,2-DICHLORO-1,1-DIFLUOROETHYL METHYL ETHER	DOW.
DICHLORODIETHYL ETHER	EVN.
EPICHLOROHYDRIN	DOW, SHC.
@ ETHYLENE OXIDE	BAS, CAU, UCC.
ETHYL ETHER, ABSOLUTE	EKK, MAL, USI.
ETHYL ETHER, TECH.	ENJ(E), PUB(E), UCC, USI.
ETHYL ETHER, U.S.P.	MAL, USI.

TABLE 2.--MISCELLANEOUS CYCLIC AND ACYCLIC CHEMICALS FOR WHICH U.S. PRODUCTION AND/OR SALES WERE EITHER REPORTED OR ESTIMATED, IDENTIFIED BY MANUFACTURER, 1976--CONTINUED

MISCELLANEOUS CHEMICALS	MANUFACTURERS' IDENTIFICATION CODES (ACCORDING TO LIST IN TABLE 3)
OTHER MISCELLANEOUS ACYCLIC CHEMICALS--CONTINUED	
@EPOXIDES, ETHERS, AND ACETALS--CONTINUED	
ETHYL VINYL ETHER	
GLICIDOL	GAF.
ISOBUTYL VINYL ETHER	DIX.
ISOPROPYL ETHER	GAF.
METHYL	ENJ(E), SHG, UCC.
METHYL VINYL ETHER	CEL.
@EPOXYENE OXIDE	GAF.
@EPOXIDES, ETHERS, ACETALS, ALL OTHER	BAS, DOM, JCC, OCC, ONC.
FATS AND OILS, CHEMICALLY MODIFIED:	
HYDROGENATED TALLOW GLYCERALDEHYDES	DA, GAF, PG, UCC.
STEARIC ACID GLYCERIDES AND OXIDIZED STEARIC ACID	CHL.
GLYCERIDES	
FATS AND OILS, CHEMICALLY MODIFIED, ALL OTHER	SDM.
GLUTARALDEHYDE BIS(SODIUM BISULFITE)	DOM, SDR.
NORMAL-HEXADECYL DISULFIDE	FK, FMT.
HYDROCARBONS:	PAS.
NORMAL-DECANE	
2, 5-DIMETHYLHEXA-2, 4-DIENE	HNY, PLC.
NORMAL-DODECANE	SFS.
HEXADECANE	HNY.
MYRCENE	HNY.
NORMAL-NONANE	IPF, NCI.
NORMAL-OCTADECANE	PLC.
NORMAL-OCTANE	HNY.
HYDROCARBONS, ALL OTHER	HNY, PLC.
LAURYL PEROXIDE	CBY, HMY, OCC, UCC.
2-MERCAPTOETHANOL	WTC, WTL.
METHYL SULFIDE	PLC.
METHYL SULFOXIDE (DIMETHYL SULFOXIDE)	CRZ, PAS, TCH.
ORGANO-ALUMINUM COMPOUNDS:	
DIETHYLALUMINUM CHLORIDE	TNA(E), TSA.
DIETHYLALUMINUM IODIDE	TSA.

TABLE 2.--MISCELLANEOUS CYCLIC AND ACYCLIC CHEMICALS FOR WHICH U.S. PRODUCTION AND/OR SALES WERE EITHER REPORTED OR ESTIMATED, IDENTIFIED BY MANUFACTURER, 1976--CONTINUED

MISCELLANEOUS CHEMICALS	MANUFACTURERS' IDENTIFICATION CODES (ACCORDING TO LIST IN TABLE 3)
OTHER MISCELLANEOUS ACYCLIC CHEMICALS--CONTINUED	
ORGANO-ALUMINUM COMPOUNDS--CONTINUED	
DIISOBUTYLALUMINUM CHLORIDE	TRA (E), TSA.
DIISOBUTYLALUMINUM HYDRIDE	TSA.
ETHYLALUMINUM DICHLORIDE	TRA (E), TSA.
ETHYLALUMINUM SESQUICHLORIDE	TRA (E), TSA.
ISOPROPENYLALUMINUM	TSA.
METHYLALUMINUM SESQUICHLORIDE	TRA (E).
SODIUM ALUMINUM CHLOROHYDROXYLACTATE	REH.
SODIUM ALUMINUM HYDROXYLACTATE	REH.
TRIETHYLALUMINUM	TRA (E), TSA.
TRISOBUTYLALUMINUM	TRA (E), TSA.
ORGANO-ALUMINUM COMPOUNDS, ALL OTHER	TSA.
ORGANO-BORON COMPOUNDS:	
BORON FLUORIDE - ETHYL ETHER COMPLEX	ACS.
ORGANO-BORON COMPOUNDS, ALL OTHER	ACS, APO, TSA.
ORGANO-LITHIUM COMPOUNDS:	
NORMAL-BUTYL LITHIUM	PTE.
SEC-BUTYL LITHIUM	PTE.
ORGANO-LITHIUM COMPOUNDS, ALL OTHER	UCC.
ORGANO-SILICON COMPOUNDS:	
DICHLOROMETHYLVINYL SILANE	UCC.
DIPHENYLPHOSPHORYLETHYLETHOXY SILANE	SFS, UCC.
ALPHA-GLYCIDYLOXYPROPYLETHOXY SILANE	UCC.
MERCAPTOGLYCOLIETHOXY SILANE	UCC.
ALPHA-METHACRYLOYLPROPYLETHOXY SILANE	UCC.
METHYLBIPHENOXYLANE AND POLYMETHYLTRISILOXANE	UCC.
POLIOXALANE SILICONES	UCC.
SILICONE FLUIDS	SPD, SWS, UCC.
TRICHLOROMETHYLSILANE	DCC.
TRICHLOROETHYLSILANE	DCC.
TRICHLOROFLUOROSILANE	DCC, UCC.
VINYLBIPHENOXY SILANE	UCC.
ORGANO-SILICONE COMPOUNDS, ALL OTHER	UCC.
ORGANO-TIN COMPOUNDS:	
BIS(TRIBUTYLTIIN)OXIDE	X.
DI-BUTYLIN BIS(ISOOCTYLMECAPTOACETATE)	CCM, X.
DIETHYLIN DICHLORIDE	CCM, X.

TABLE 2.--MISCELLANEOUS CYCLIC AND ACYCLIC CHEMICALS FOR WHICH U.S. PRODUCTION AND/OR SALES WERE EITHER REPORTED OR ESTIMATED, IDENTIFIED BY MANUFACTURER, 1976--CONTINUED

MISCELLANEOUS CHEMICALS	MANUFACTURERS' IDENTIFICATION CODES (ACCORDING TO LIST IN TABLE 3)
OTHER MISCELLANEOUS ACYCLIC CHEMICALS--CONTINUED	
ORGANO-TIN COMPOUNDS--CONTINUED	
DIBUTYL TIN METHOXIDE (DIBUTYLMETHOXYTIN)	CCA, X
DIBUTYL TIN OXIDE	X
TEIBUTYL TIN CHLORIDE	MET
TEIBUTYL TIN FLUORIDE	MET
ORGANO-TIN COMPOUNDS, ALL OTHER	APO, CCA, CCM, MET, X
ORGANO-ZINC COMPOUNDS:	
DIBETHYLZINC	TSA
PERCHLOROTETRAMETHANETHIOL	SFA, SFC
ZEPHYROALKYL POLYETHER	SYP(E), X
@PHOSGENE (CARBONYL CHLORIDE)	ACS, CTN, DUP, HOB(E), OMC, OTC(E), PRG, RUC, UCC, UPJ
PINE OIL, SYNTHETIC	CBY, NCI
PROPANONE PEROXIDE	GLD
SODIUM ETHOXIDE	FMP(E)
SODIUM FORMALDEHYDE BISULFITE	EK, WAY
SODIUM FORMALDEHYDE SULFOXYLATE	DA
@SODIUM METHOXIDE	DA, HSH, OMC, RBC
SUCCINYL PEROXIDE	WTL
TETRAKIS (HYDROXYMETHYL)PHOSPHONIUM CHLORIDE	X
ZINC FORMALDEHYDE SULFOXYLATE	USO
@MISCELLANEOUS ACYCLIC CHEMICALS, ALL OTHER	ALD, ARA, BKL, CCL, DA, DAN, EK, GAF, GLY, GNM, IMC, MET, NCI, PVO, SFS, SHC, SM, UCC, VFC, WAY, WLN, WTL
MIXTURES NOT SPECIFICALLY ITEMIZED (SPECIFY):	DUP
POLYMETHACRYLIC ACID ESTERS	
MIXTURES OF MISCELLANEOUS ACYCLIC CHEMICALS NOT SPECIFICALLY ITEMIZED	ALX, CCL, CEL, DUP, EKK, HPC, ICI, MCI, MLS, PG, PLC, PMP, PVO, S, SCP, SM, TKL, VEL, WM, WTH

MISCELLANEOUS CYCLIC AND ACYCLIC CHEMICALS

TABLE 3.--MISCELLANEOUS CYCLIC AND ACYCLIC CHEMICALS: DIRECTORY OF MANUFACTURERS, 1976

ALPHABETICAL DIRECTORY BY CODE

[Names of manufacturers that reported production or sales of miscellaneous cyclic and acyclic chemicals to the U.S. International Trade Commission for 1976 are listed below in the order of their identification codes as used in table 2.]

Code	Name of company	Code	Name of company
AAC	Alcolac Chemical Corp.	GNP	Nipro Inc.
ABB	Abbott Laboratories	CO	Continental Oil Co.
	Allied Chemical Corp.:	COL	Collier Carbon & Chemical Corp.
ACS	Specialty Chemicals Div.	CP	Colgate-Palmolive Co.
ACY	American Cyanamid Co.	CPS	CPS Chemical Co.
ADC	Anderson Development Co.	CPV	Cook Paint & Varnish Co., Inc.
AIP	Air Products & Chemicals, Inc.	CRN	CPC International, Inc., Amerchol
AKS	Arkansas Co., Inc.	CRZ	Crown Zellerbach Corp., Chemical Products Div.
ALB	Ames Laboratories, Inc.	CTN	Chemetron Corp., Chemical Products Div.
ALD	Aldrich Chemical Co., Inc.	CWN	Upjohn Co., Fine Chemical Div.
ALF	Allied Chemical Corp., Fibers Div.		
ALX	Alox Corp.	DA	Diamond Shamrock Corp.
AME	Stauffer Chemical Co.	DAN	Dan River, Inc.
ARA	Arapahoe Chemicals, Inc. Sub/Syntex Corp. (U.S.A)	DBC	Dow Badische Co.
ARC	Armak Co.	DCC	Dow Corning Corp.
ARM	USS Agri-Chemicals Div. of U. S. Steel Corp.	DIX	Dixie Chemical Co.
ARS	Arsynco, Inc.	DOM	Dominion Products, Inc.
ARZ	Arizona Chemical Co.	DOW	Dow Chemical Co.
ASH	Ashland Oil, Inc., Ashland Chemical Co.	DUP	E. I. DuPont de Nemours & Co., Inc.
ASL	Ansul Chemical Co.	DVC	Dover Chemical Corp. Sub. of ICC Industries, Inc.
AV	Avtex Fibers, Inc.		
AZT	Dart Industries, Inc., Aztec Chemicals Div.	EFH	E. F. Houghton & Co.
		EX	Eastman Kodak Co.:
BAS	BASF Wyandotte Corp.	EKT	Tennessee Eastman Co. Div.
BAX	Baxter Laboratories, Inc.	EXX	Texas Eastman Co. Div.
BFC	B. F. Goodrich Co., B. F. Goodrich Chemical Co. Div.	ELP	El Paso Products Co.
BKC	J. T. Baker Chemical Co.	EMR	Emery Industries, Inc.
BKL	Kewanee Industries, Inc., Millmaster Chemical Co. Div.	ENJ	Exxon Chemical Co. U.S.A.
BME	Bendix Corp., FMD Div.	EVN	Evans Chemicals, Inc.
BOR	Borden Co., Borden Chemical Div.	EW	Westinghouse Electric Corp.
BRD	Lonza, Inc.		
BUK	Buckeye Cellulose Corp.	FCA	Farmers Chemical Association, Inc.
		FER	Ferro Corp.:
CAD	Noury Chemical Corp.		Ferro Chemical Div.
CAU	Calcasieu Chemical Corp.		Grant Chemical Div.
CBD	Chembond Corp.		Keil Chemical Div.
CBY	Crosby Chemicals, Inc.	FIN	Hexcel Corp., Fine Organics Div.
CCA	Interstab Chemical, Inc.	FMC	FMC Corp.:
CCH	Pearsall Chemical Corp.	FMI	Industrial Chemical Div.
CCL	Catawba-Charlab, Inc., Polymer Specialties Co.	FMP	Industrial Chemical Div.
		FMT	Fairmount Chemical Co., Inc.
CCW	Cincinnati Milacron Chemicals, Inc.	FOC	Handschy Chemical Co., Farac Oil & Chemical Div.
CDY	Chemical Dynamics Corp.	FRO	Vulcan Materials Co., Chemicals Div.
CEL	Celanese Corp.:	FTE	Foot Mineral Co.
	Celanese Chemical Co.	FTX	CF Industries, Inc.
	Celanese Fibers Co.		
	Celanese Polymer Specialties Co.	GAF	GAF Corp., Chemical Div.
CGY	Ciba-Geigy Corp. and Pharmaceutical Div.	GAN	Gane's Chemical Works, Inc.
CHL	Chemol, Inc.	GIV	Givaudan Corp.
CHN	N-Ren Corp., Cherokee Nitrogen Div.	GLD	SCM Corp., Glidden-Durkee Div.
CHP	C. H. Patrick & Co., Inc.	GLY	Glyco Chemicals, Inc.
CHT	Chatten Drug & Chemical Co., Chatten Chemicals Div.	GNM	General Mills Chemicals, Inc.
CLK	Clark Chemical Corp.	GOC	Gulf Oil Corp., Gulf Oil Chemicals Co.-U.S.
CLN	Standard Brands, Inc., Clinton Corp.	GP	Georgia-Pacific Corp.:
			Rebecca Plant
			Resins Operations

SYNTHETIC ORGANIC CHEMICALS, 1976

TABLE 3.--MISCELLANEOUS CYCLIC AND ACYCLIC CHEMICALS: DIRECTORY OF MANUFACTURERS, 1976--CONTINUED

Code	Name of company	Code	Name of company
GPR	Grain Processing Corp.	OCC	Oxirane Chemical Co.
GRD	W. R. Grace & Co., Polymers & Chemicals Div.	OH	Airco, Inc., Ohio Medical Products Div.
GRH	W. R. Grace & Co., Hatco Chemical Div.	OMC	Olin Corp.
CTL	Great Lakes Chemical Corp.	OMS	E. R. Squibb & Sons, Inc.
CYR	Goodyear Tire & Rubber Co.	ONX	Millmaster Onyx Corp., Onyx Chemical Co.
HAL	C.P. Hall Co.	ORO	Chevron Chemical Co.
HDC	Hodag Chemical Corp.	ORT	Roehr Chemicals, Inc.
HEX	Hexagon Laboratories, Inc.	OTC	Story Chemical Corp.
HFT	Syntax Agribusiness, Inc.	PAS	Pennwalt Corp.
HK	Hooker Chemicals & Plastic Corp.:	PCW	Pfister Chemical Works
HKD	Durez Div.	PD	Parke, Davis & Co. Sub of Warner-Lambert Co.
HMP	W. R. Grace & Co., Organic Chemicals Div.	PEN	CPC International, Inc., S. B. Penick Div.
HMV	Humphrey Chemical Co.	PFN	Pfanstiehl Laboratories, Inc.
HN	Tenneco Chemicals, Inc.	PFX	Plastifax, Inc.
HPC	Hercules, Inc.	PFZ	Pfizer, Inc. & Pfizer Pharmaceuticals, Inc.
HRT	Hart Products Corp.	PG	Procter & Gamble Co.
HSB	Harshaw Chemical Co. Div. of Kewanee Oil Co.	PIC	Pierce Chemical, Inc.
HUM	Kraft, Inc., Hunko Products Chemical Div.	PLC	Phillips Petroleum Co.
ICI	ICI United States, Inc., Specialty Chemical Group	PLS	Plastics Engineering Co.
IFF	International Flavor & Fragrances, Inc.	PMP	Premier Malt Products, Inc.
IMC	IME Chemical Group, Inc., Nitroparaffin Div.	PMA	Pan American Chemical Corp.
IOC	Ionac Chemical Co. Div. of Sybron Corp.	PPG	Pittsburgh Plate Glass Co.
JCC	Jefferson Chemical Co., Inc.	PRD	Ferro Corp., Productol Chemical Div.
KAI	Kaiser Aluminum & Chemical Corp., Kaiser Chemicals Div.	PTT	Petro-Tex Chemical
KCC	Kennecott Copper Corp., Chino Mines Div.	PUB	Publicker Industries, Inc.
KCH	Joseph Ayers, Inc.	PVO	PVO International, Inc.
KF	Kay-Fries Chemicals, Inc.	QCP	Quaker Chemical Corp.
KPT	Koppers Co., Inc., Organic Materials Div.	QKO	Quaker Oats Co.
LEM	Napp Chemicals, Inc.	RBC	Fike Chemicals, Inc.
LIL	Eli Lilly & Co., Inc.	RCI	Reichhold Chemicals, Inc.
MAL	Mallinckrodt Chemical Works	RCN	Racon, Inc.
MCB	Borg-Warner Corp., Weston Chemical Co.	RDA	Rhodia, Inc.
MCI	Mooney Chemicals, Inc.	REH	Reheis Chemical Co. Div. of Armour Pharmaceutical Co.
MHI	Ventron Corp.	REM	Remington Arms Co., Inc.
MIL	Milliken & Co., Milliken Chemical Div.	RH	Rohm & Haas Co.
MLS	Miles Laboratories, Inc., Marshall Div.	RSA	R.S.A. Corp.
MMM	Minnesota Mining & Manufacturing Co.	RUB	Hooker Chemical Corp., Ruco Div.
MNO	Monochem, Inc.	RUC	Rubicon Chemicals, Inc.
MNR	Monroe Chemical	S	Sandoz, Inc.
MOB	Mobay Chemical Co.	SAL	Salsbury Laboratories
MON	Monsanto Co.	SAR	Sartomer Industries, Inc.
MRK	Merck & Co., Inc.	SBC	Scher Bros.
MRV	Marlowe-Van Loan Corp.	SCP	Henkel, Inc.
MTO	Montrose Chemical Corp. of California	SDC	Martin-Marietta Corp., Sodeyco Div.
NCI	Union Camp Corp.	SDH	Sterling Drug, Inc.:
NEO	Norda, Inc.	SDW	Hilton-Davis Chemical Co. Div.
NES	Nease Chemical Co., Inc.	SFA	Winthrop Laboratories Div.
NEV	Neville Chemical Co.	SFC	Stauffer Chemical Co.:
NLC	Nalco Chemical Co.	SFI	Agricultural Div.
NOC	Norac Co., Inc. and Mathe Chemical Co. Div.	SFP	Calbio Chemicals, Inc. Div.
NOR	Norwich Pharmacal Co.	SFS	Industrial Div.
NPI	Stephan Chemical Co., Polychem Dept.	SFG	Plastics Div.
NSC	National Starch & Chemical Corp.	SFH	Specialty Chemical Div.
NTB	National Biochemical Co.	SIC	Shell Oil Co., Shell Chemical Co. Div.
NTL	NL Industries, Inc.	SHP	Shepherd Chemical Co.
NWP	Northern Petrochemicals Co.	SK	Smith & Kline Chemicals
		SKO	Getty Refining & Marketing Co.
		SM	Mobil Oil Corp., Chemical Co.:
			Chemical Coatings Div.
			Phosphorus Div.

MISCELLANEOUS CYCLIC AND ACYCLIC CHEMICALS

TABLE 3.--MISCELLANEOUS CYCLIC AND ACYCLIC CHEMICALS: DIRECTORY OF MANUFACTURERS, 1976--CONTINUED

Code	Name of company	Code	Name of company
SNO	SunOlin Chemical Co.	UCC	Union Carbide Corp.
SNW	Sun Chemical Corp., Chemical Div.	UOP	UOP, Inc., UOP Chemical Div.
SOC	Standard Oil Co. of California, Chevron Chemical Co.	UPJ	Upjohn Co.
SOH	Vistron Corp.	UPM	UOP, Inc.
SPD	General Electric Co., Silicone Products Dept.	USB	U.S. Borax Research Corp.
STC	American Hoechst Corp., Sou-Tex Works	USI	National Distillers & Chemicals Corp., U.S. Industrial Chemicals Co.
STP	Stepan Chemical Co.	USO	U.S. Oil Company
SW	Sherwin-Williams Co.	USR	Uniroval, Inc., Chemical Div.
SWS	Stauffer Chemical Co., SWS Silicones Div.	USS	USS Chemicals Div. of U.S. Steel Corp.
SYP	Dart Industries, Inc., Synthetic Products Co. Div.	VAL	Valchem
TCH	Emery Industries Inc., Tylon Div.	VEL	Velsicol Chemical Corp., Inc.
TID	Getty Refining & Marketing Co., Delaware Refinery	VGC	Virginia Chemicals, Inc.
TKL	Thickol Chemical Corp.	VND	Van Dyk & Co., Inc.
TNA	Ethyl Corp.	VTC	Vicksburg Chemical Co. Div. of Vertac Consolidated
TNI	The Gillette Co., Chemical Div.	WAY	Phillip A. Hunt Chemical Corp., Organic Chemical Div.
TRO	Troy Chemical Corp.	WLN	Wilmington Chemical Corp.
TTA	Texas Alkyls, Inc.	WM	Wmex Corp.
TX	Texaco, Inc.	WTC	Witco Chemical Co., Inc.
TZC	Magnesium Elektron, Inc.	WTH	Union Camp Corp., Chemical Div., Dover Plant
		WTL	Pennwalt Corp., Lucidal Div.
		WYC	Wycon Chemical Co.

Note.--Complete names and addresses of the above reporting companies are listed in table 1 of the Appendix.

APPENDIX

APPENDIX

TABLE I.--SYNTHETIC ORGANIC CHEMICALS: ALPHABETICAL DIRECTORY OF MANUFACTURERS,
BY COMPANY, 1976

[Names of synthetic organic chemical manufacturers that reported production or sales to the U.S. International Trade Commission for 1976 are listed below alphabetically, together with their identification codes as used in table 2 of the 15 individual sections of this report]

Identification code	Name of company	Office address
AEP	A & E Plastik Pak Co., Inc-----	14505 E. Proctor Ave., Industry, CA 91749.
AZS	AZS Corp-----	762 Marietta Blvd., Atlanta, GA 30318.
ABB	AZ Products Co. Div-----	2525 So. Combee Rd., Eaton Park, FL 33840.
ABS	Abbott Laboratories-----	14th St. and Sheridan Rd., N. Chicago, IL 60064.
ABX	Abex Corp., Friction Products Group-----	P. O. Box 3207, Winchester, VA 22601.
WLC	Agrico Chemical Co-----	P. O. Box 3166, Tulsa, OK 74101.
AGY	Agway, Inc., Olean Nitrogen Div-----	1446 Buffalo St., Olean, NY 14760.

SKO	Getty Refining & Marketing Co-----	P. O. Box 1650, Tulsa, OK 74102.
TID	Delaware Refinery-----	Delaware City, DE 19706.
TNI	The Gillette Co., Chemical Div-----	3500 W. 16th St., N. Chicago, IL 60064.
GIL	Gilman Paint & Varnish Co-----	216 W. 8th St., Chattanooga, TN 37401.
GIV	Glyvaudon Corp-----	100 Delawanna Ave., Clifton, NJ 07014.
GLY	Glyco Chemicals, Inc-----	51 Weaver St., Greenwich, CT 06830.
GPI	Goodpasture, Inc-----	P. O. Drawer 921, Brownfield, TX 79316.

SYNTHETIC ORGANIC CHEMICALS, 1976

TABLE 1.--SYNTHETIC ORGANIC CHEMICALS: ALPHABETICAL DIRECTORY OF MANUFACTURERS,
BY COMPANY, 1976--CONTINUED

Identification code	Name of company	Office address
BFG	B. F. Goodrich Co., B. F. Goodrich Chemical Co. Div.	6100 Oak Tree Blvd., Cleveland, OH 44131.
GYR	Goodyear Tire & Rubber Co----- W. R. Grace & Co.:	1144 E. Market St., Akron, OH 44316.
CCC	AG Chem. Group-----	P. O. Box 277, Memphis, TN 38101.
GRH	Hatco Chemical Div-----	King George Post Rd., Fords, NJ 08863.
MRO	Hatco Polyester Div-----	1711 Elizabeth Ave. West, Linden, NJ 07036.
HMP	Organic Chemicals Div-----	Poissou Ave., Nashua, NH 03060.
GRD	Polymers & Chemicals Div-----	55 Hayden Ave., Lexington, MA 02173.
GPR	Grain Processing Corp-----	1600 Oregon St., Muscatine, IA 52761.
GRA	Great American Chemical Corp-----	650 Water St., Fitchburg, MA 01420.
CTL	Great Lakes Chemical Corp-----	P. O. Box 2200, West Lafayette, IN 47906.
GRW	Great Western Sugar Co-----	P. O. Box 5308, Terminal Annex, Denver, CO 80217.
CNM	Greenwood Chemical Co-----	P. O. Box 26 - State Highway #690, Greenwood, VA. 22943.
GOC	Gulf Oil Corp., Gulf Oil Chemicals Co. - U. S.	P. O. Box 3766, Houston, TX 77001.
GTH	Guth Corp-----	322 S. Center St., Hillside, IL 60162.
HNC	H & N Chemical Co-----	90 Maltese Dr., Totowa, NJ 07512.
HLI	Haag Laboratories, Inc-----	14010 S. Seeley Ave., Blue Island, IL 60406.
FAL	C. P. Hall Co-----	7300 S. Central Ave., Chicago, IL 60638.
FOC	Handschy Chemical Co., Farac Oil and Chemical Div.	13601 S. Ashland Ave., Riverdale, IL 60627.
HAN	Hanna Chemical Coatings Corp-----	P. O. Box 147, Columbus, OH 43216.
HDM	Hardman, Inc-----	600 Cortlandt St., Belleville, NJ 07109.
HSH	Harshaw Chemical Co. Sub. of Kewanee Oil Co.	1945 E. 97th St., Cleveland, OH 44106.
HRT	Hart Products Corp-----	173 Sussex St., Jersey City, NJ 07302.
HVG	Havag Industries, Inc. Sub. of Hercules, Inc.	900 Greenback Rd., Wilmington, DE 19808.
HKY	Hawkeye Chemical Co-----	P. O. Box 899, Clinton, IA 52733.
SCP	Henkel, Inc-----	400 Alfred Ave., Teaneck, NJ 07666.
HCR	Hercof Chemical Corp-----	Petrochemical Complex, Ponce, PR 00731.
HPC	Hercules, Inc-----	910 Market St., Wilmington, DE 19899.
HER	Heresite & Chemical Co-----	822 S. 14th St., Manitowoc, WI 54220.
HET	Heterochemical Corp-----	111 E. Hawthorne Ave., Valley Stream, NY 11580.
HEW	Hewitt Soap Co., Inc-----	333 Linden Ave., Dayton, OH 45403.
HEX	Hexagon Laboratories, Inc----- Hexcel Corp.:	3536 Peartree Ave., Bronx, NY 10475.
FIN	Fine Organics Div-----	205 Main St., Lodi, NJ 07644.
REZ	Rezolin Div-----	20701 Nordhoff St., Chatsworth, CA 91311.
HDC	Hodag Chemical Corp-----	7247 N. Central Park Ave., Skokie, IL 60076.
HOF	Hoffmann-LaRoche, Inc-----	324-424 Kingsland St., Nutley, NJ 07110.
HK & HKD	Hooker Chemicals & Plastics Corp-----	MPO Box 8, Niagara Falls, NY 14302, and Walck Rd., N. Tonawanda, NY 14121.
RUB	Ruco Div-----	P. O. Box 456, Burlington, NJ 08016.
EFH	E. F. Houghton & Co-----	303 W. Lehigh Ave., Philadelphia, PA 19133.
HMV	Humphrey Chemical Co-----	Devine St., North Haven, CT 06473.
WAY	Philip A. Hunt Chemical Corp., Organic Chemical Div.	P. O. Box 4249, E. Providence, RI 02914.
HNT	Huntington Laboratories, Inc-----	P. O. Box 710, Huntington, IN 46750.
HUS	Husky Industries, Inc-----	62 Perimeter Center E., Atlanta, GA 30346.
HYN	Hynson, Westcott & Dunning, Inc-----	Charles and Chase Sts., Baltimore, MD 21201.
ICI	ICI United States Inc.:	
	Plastics Div-----	Wilmington, DE 19897.
	Specialty Chemicals Group-----	Wilmington, DE 19897.
IMC	IMC Chemical Group, Inc-----	P. O. Box 207, Terre Haute, IN 47808; P. O. Box 149, Orrington, ME 04474 and 100 Lister Ave., Newark, NJ 07105.
	McWorter Resins-----	P. O. Box 308, Cottage Pl., Carpentersville, IL 60110.
	Nitroparaffin Div-----	IMC Plaza, Libertyville, IL 60048.

U.S. IMPORTS OF BENZENOID CHEMICALS AND PRODUCTS

U.S. general imports of benzenoid chemicals and products entered under the Tariff Schedules of the United States (TSUS), schedule 4, part 1, subparts B and C are analyzed by the U.S. International Trade Commission annually and published in detail in a separate report.¹ General imports of benzenoid items entered in parts 1B and 1C totaled 362.4 million pounds with a foreign invoice value of \$493.8 million in 1976 compared with 337.2 million pounds with a foreign invoice value of \$394.3 million in 1975.

Benzenoid products that are "competitive" with similar domestic products, because they accomplish results substantially equal to those accomplished by the similar domestic product when used in substantially the same manner, are subject to a special basis of valuation for customs purposes known as the "American selling price". If "noncompetitive", the benzenoid products are valued for customs purposes on the basis of the "United States value." The essential difference between these two values is that "American selling price" is based on the wholesale price in the United States of the "competitive" domestic product, whereas "United States value" is based on the wholesale price in the United States of the imported product less most of the expenses incurred in bringing the product to the United States and selling it. When neither of these two valuation bases applies, then the "export value," "foreign value," or "constructed value" is used as the valuation basis under section 402 or 402a Tariff Act of 1930, as amended. The competitive status of benzenoid imports in 1976 is shown in table 2.

Industrial organic chemicals that are entered under part 1B consist chiefly of benzenoid intermediates and small quantities of acyclic compounds which are derived in whole or in part from benzenoid compounds. Also included are mixtures and small quantities of finished products not specially provided for in part 1C (e.g., rubber-processing chemicals). In terms of value, 36.6 percent of all the benzenoid imports under part 1B in 1976 came from West Germany; 21.0 percent, from Japan; 10.8 percent from Italy; and 7.8 percent, from the United Kingdom.

Finished organic chemical products entered under part 1C include dyes, pigments, medicinals, flavor and perfume materials, pesticides, plastics materials, and certain other specified products. In terms of value 36.0 percent of all finished benzenoid imports under part 1C in 1976 came from West Germany; 15.7 percent, from Switzerland; 13.4 percent, from the United Kingdom; and 10.7 percent, from Japan.

¹ *Imports of Benzenoid Chemicals and Products, 1976*, TC Publication 828, 1977.

APPENDIX

TABLE 2.--BENZENOID CHEMICALS AND PRODUCTS: SUMMARY OF U.S. GENERAL IMPORTS ENTERED UNDER SCHEDULE 4, PARTS 1B AND 1C OF THE TSUS, AND ANALYSIS BY COMPETITIVE STATUS, 1976

Part and competitive status	Number of items	Quantity : pounds	Percent of total quantity	Foreign invoice value	Percent of foreign value	Unit foreign value
		1,000		1,000		Per
		pounds		dollars		powd

Duty based on export value-----	365	44,404	12.2	124,858	25.3	2.81
Competitive status not available-----	10	6,226	1.7	11,940	2.4	1.92

¹ Detail may not add to total due to rounding.

² American selling price.

Source: Compiled by the U.S. International Trade Commission from records of the U.S. Bureau of Customs.

Note:--The totals shown in this table differ from those given in the official statistics of the U.S. Department of Commerce chiefly because of differences in coverage and in the methods used in compiling the data. In general, the statistical coverage in 1976 varies from a low of 51 percent for flavors and perfumes, to about 84 percent coverage of 84 percent dyes, 80 percent intermediates, and 78 percent pigments.

SYNTHETIC ORGANIC CHEMICALS, 1976

TABLE 3.--CYCLIC INTERMEDIATES: GLOSSARY OF SYNONYMOUS NAMES

Common name	Standard (Chemical Abstracts) name
1,2,4-Acid-----	4-Amino-3-hydroxy-1-naphthalenesulfonic acid.
Acid yellow 9-----	6-Amino-3,4'-azodibenzenesulfonic acid.
p-Aminobenzenesulfonic acid-----	Sulfanilic acid and salt.
Amino G acid-----	7-Amino-1,3-naphthalenedisulfonic acid.
Amino I acid-----	6-Amino-1,3-naphthalenedisulfonic acid.
Amino R salt-----	3-Amino-2,7-naphthalenedisulfonic acid.
Aniline oil-----	Aniline.
Anthraflavic acid-----	2,6-Dihydroxyanthraquinone.
Anthrarufin-----	1,5-Dihydroxyanthraquinone.
Benzal chloride-----	α,α -Dichlorotoluene.
Benzanthrone-----	7H-Benz[de]anthracen-7-one.
Benzotrichloride-----	α,β,γ -Trichlorotoluene.
Bisphenol A-----	4,4'-Isopropylidenediphenol.
B.O.N-----	3-Hydroxy-2-naphthoic acid.
Bromobenzanthrone-----	3-Bromo-7H-benz[de]anthracen-7-one.
Broemmer's acid-----	6-Amino-2-naphthalenesulfonic acid.
C acid-----	3-Amino-1,5-naphthalenedisulfonic acid.
Chlorobenzanthrone-----	Chloro-7H-benz[de]anthracen-7-one.
Chromotropic acid-----	4,5-Dihydroxy-2,7-naphthalenedisulfonic acid.
Chrysazin-----	1,8-Dihydroxyanthraquinone.
2-Cyanopyridine-----	Picolinonitrile.
3-Cyanopyridine-----	Nicotinonitrile.
Cyanuric chloride-----	2,4,6-Trichloro-s-triazine.
DADI-----	Dianisidine diisocyanate.
DBB-----	p-Dibutoxybenzene.
Decacyclene-----	Diacenaphtho[1,2-j:1,2'-f]fluoranthene.
Developer Z-----	3-Methyl-1-phenyl-2-pyrazolin-5-one.
o-Dianisidine-----	3,3'-Dimethoxybenzidine.
1,1'-Dianthrilmide-----	1,1'-Iminodianthraquinone.
Dibenzanthrone-----	Violanthrone.
4,4'-Dihydroxydiphenylsulfone-----	4,4'-Sulfonyldiphenol.
Dimethyl POPOP-----	1,4-Bis[2-(4-methyl-5-phenylloxazolyl)]benzene.
4,5-Dinitrochrysazin-----	1,8-Dihydroxy-4,5-dinitroanthraquinone.
Durene-----	1,2,4,5-Tetramethylbenzene.
Fast Red G base-----	2-Nitro-p-toluidine [$\text{NH}_2=1$].
Fast Scarlet R base-----	5-Nitro-o-anisidine [$\text{NH}_2=1$].
G salt-----	7-Hydroxy-1,3-naphthalenedisulfonic acid.
Gamma acid-----	6-Amino-4-hydroxy-2-naphthalenesulfonic acid, sodium salt.
Gold salt-----	9,10-Dihydro-9,10-dioxo-1-anthracenesulfonic acid and salt.
H acid-----	4-Amino-5-hydroxy-2,7-naphthalenedisulfonic acid.
Hellimellitene-----	1,2,3-Trimethylbenzene.
J acid-----	7-Amino-4-hydroxy-2-naphthalenesulfonic acid, sodium salt.
J acid urea-----	7,7'-Ureylenebis[4-hydroxy-2-naphthalenesulfonic acid].
Koch's acid-----	8-Amino-1,3,6-naphthalenetrisulfonic acid.
MELP-----	5-Ethyl-2-picoline
Mesitylene-----	1,3,5-Trimethylbenzene.
Methane base-----	4,4'-Methylenebis[N,N-dimethylaniline].
Michler's hydrol-----	4,4'-Bis[dimethylamino]benzhydrol.
Michler's ketone-----	4,4'-Bis[dimethylamino]benzophenone.

APPENDIX

TABLE 3.--CYCLIC INTERMEDIATES: GLOSSARY OF SYNONYMOUS NAMES--CONTINUED

Common name	Standard (Chemical Abstracts) name
Naphthionic acid-----	4-Amino-1-naphthalenesulfonic acid.
o-Naphthionic acid-----	1-Amino-2-naphthalenesulfonic acid.
β-Naphthol-----	2-Naphthol, tech.
Naphthol AS-----	5-Hydroxy-2-naphthanilide.
α-Naphthylamine-----	1-Naphthylamine.
Neville& Winther's acid-----	4-Hydroxy-1-naphthalenesulfonic acid.
Pentaanthrimide-----	1,4,5,8-Tetrakis (1-anthraquinonylamino)anthraquinone.
Phenylbiphenyl-----	Terphenyl.
N-Phenyldiethanolamine-----	2,2'-(1-Phenyl)imino]diethanol.
Phenyl J acid-----	7-Anilino-4-hydroxy-2-naphthalenesulfonic acid.
Phenyl peri acid-----	8-Anilino-1-naphthalenesulfonic acid.
POPOP-----	1,4-Bis [2-(5-phenyloxazolyl)]benzene.
Pseudocumene-----	1,2,4-Trimethylbenzene.
Pyrazoleanthrone-----	Anthra[1,9 cd]pyrazol-6(2H)-one.
Pyrazoleanthrone yellow-----	[3,3'-Bianthra[1,9-cd]pyrazole]-6,6'-(2H,2'H)dione.
Pyrazolone T-----	5-Oxo-1-(p-sulfonylphenyl)-2-pyrazoline-3-carboxylic acid.
Quinizarin-----	1,4-Dihydroxyanthraquinone.
2-Quinizarinsulfonic acid-----	9,10-Dihydro-1,4-dihydroxy-9,10-dioxo-2-anthracene-sulfonic acid.
Quinoline yellow base-----	Quinophthalone.
R salt-----	5-Hydroxy-2,7-naphthalenedisulfonic acid, disodium salt.
Schaffer's acid-----	6-Hydroxy-2-naphthalenesulfonic acid.
Silver salt-----	9,10-Dihydro-9,10-dioxo-2-anthracenesulfonic acid and salt.
Solvent Yellow 1-----	p-Phenylazoaniline and hydrochloride.
Solvent Yellow 3-----	4-(o-Tolylazo)-o-toluidine.
o-Sulfobenzaldehyde-----	o-Formylbenzenesulfonic acid.
Thiosalicylic acid-----	o-Mercaptobenzoic acid.
Tobias acid-----	2-Amino-1-naphthalenesulfonic acid.
TODI-----	Bitolyene diisocyanate.
o-Tolidine-----	3,3'-Dimethylbenzidine.
α-Toluic acid-----	Phenylacetic acid.
α-Tolunitrile-----	Phenylacetone trile.
4-m-Tolylenediamine-----	Toluene-2,4-diamine.
Trimellitic anhydride-----	1,2,4-Benzenetricarboxylic acid, 1,2-anhydride.
Trimethyl base-----	1,3,5-Trimethyl-2-methyleneindoline.
Trinitrophenol-----	Picric acid.
Vinyltoluene-----	ar-Methylstyrene.
